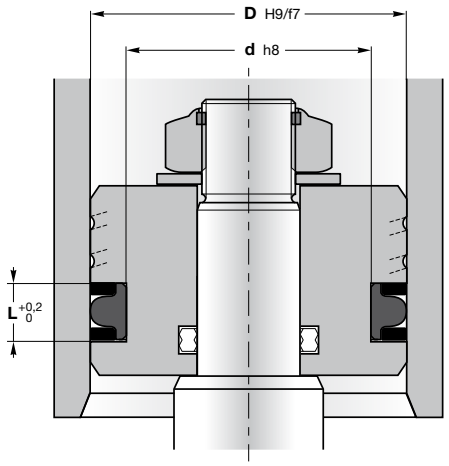
10TPI



Machining of housings: see pages 48-49

10TPI piston T-seal combines a resilient sealing ring with a hard split back-up ring on each side of the sealing element.

Its compact design provides improved stability and extrusion resistance in dynamic fluid sealing applications. The flange or base of the T-seal forms a tight seal in the gland and supports the anti-extrusion back-up rings.

The Piston T-seal **eliminates** the spiral or twisting failure that can occur when O-rings are used against a dynamic surface.

Operating conditions	**see page 8**
Pressure	≤ 35 MPa
Temperature	-35°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**
Materials	**see pages 10-19**
Seal ①	NBR1970
Anti-extrusion rings ②	POM
Assembly	**see pages 54-59**
On one-piece pistons	

Advantages

- Compact design
- High extrusion resistance
- Easy to fit
- Double acting
- No twisting

Please contact us for applications approaching maximum values.

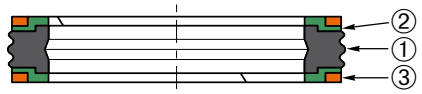
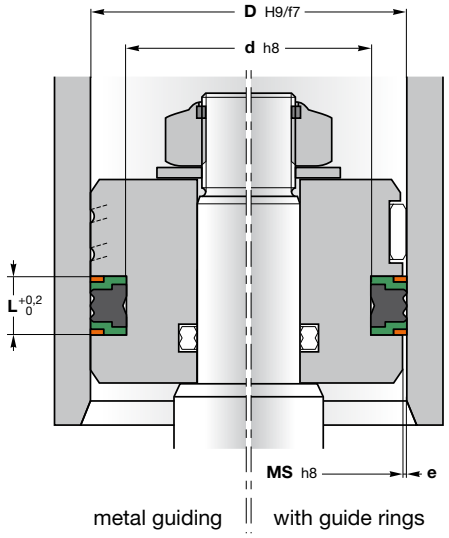
10TPI seals with diameters between 20 and 1500 mm can be manufactured within short delivery time.
For prices and availability: **www.sealtech-business.be**



10DBS.../AE



metal guiding | with guide rings

MS = D - 2e

Machining of housings: see pages 48-49

10DBS.../AE is a sealing rubber element with low permanent deformation which provides good sealing performance. Three compact and small seal edges ensure perfect fluid control. Two anti-extrusion rings with stabilisers avoid the rotation of the rubber element.

The **special geometry** of the seals ensures that the pressure pre-loads the energising element without any risk of extrusion.

Operating conditions	**see page 8**
Pressure	≤ 40 MPa
Temperature	-40°C to 110°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Seal ①	NBR2475
Anti-extrusion rings ②	TPE63
Anti-extrusion rings ③	POM24

Assembly	**see pages 54-59**
On one-piece pistons	

Advantages

- Good sealing effect
- Excellent extrusion resistance
- Excellent wear resistance
- Perfect fluid control
- Easy installation on monobloc pistons

Please contact us for applications approaching maximum values.

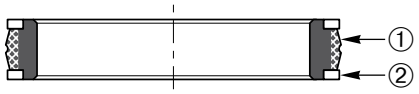
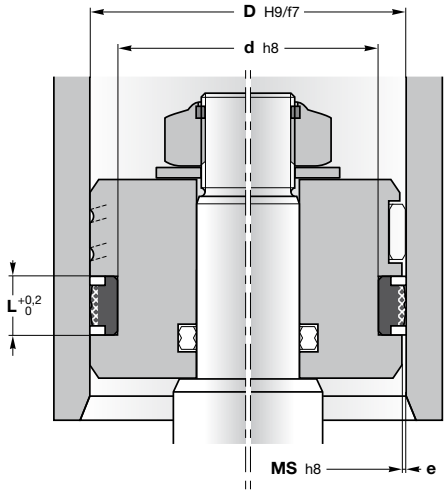
Fabric double acting piston seal with back-up rings



10DPC.../NEO



MS = D - 2e

Machining of housings: see pages 48-49

D	26 MPa	32 MPa	40 MPa	50 MPa
	e (mm)			
≤ 80	0,6	0,55	0,45	0,35
> 80	0,65	0,6	0,5	0,4

10DPC.../NEO is a double acting seal composed of a sealing rubber reinforced element and two back-up rings.

The dynamic side of the rubber part is fabric reinforced. Fabric reinforced nitrile elastomer has a higher mechanical strength and better lubricating properties.

Operating conditions	**see page 8**
Pressure	≤ 50 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Seal ①	NBR fabric/NBR
Anti-extrusion rings ②	Acetal resin

Assembly	**see pages 54-59**
On one-piece pistons	

Advantages

- Efficient sealing effect at high and low pressure
- Good dynamic and static friction behavior
- Low friction
- High pressure
- Improved abrasion resistance

Please contact us for applications approaching maximum values.

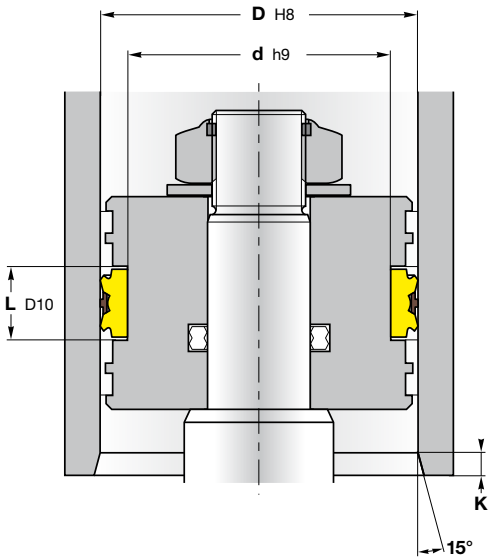
12TDMA



Machining of housings: see pages 48-49

Hunger® **12TDMA** tandem seal recommended for use where different fluids on each side are to be separated.

Due to its good dry running properties, it can be used as a fluid seal on one side and simultaneously as a dirt wiper on the other side.

12TDMA seal consists of 2 parts, an elastic ring of PU with two sealing lips and a slide ring of abrasion resistant PTFE-Bronze-compound with a sealing edge.

Prior to fitting, the sealing lip protrudes beyond the nominal diameter of the seal and is pressed against the cylinder wall after fitting. Thus **effective sealing** is provided even at zero pressure.

Operating conditions	**see page 8**
Pressure	≤ 25 MPa
Temperature	-35°C to 100°C
Speed	≤ 1 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Seal ①	PU
Dynamic sealing element ②	PTFE bronze

Assembly — **see pages 54-59**

First insert the PU ring into the grove. After extending the PTFE ring, assemble it on the PU-ring and finally calibrate it.

Advantages

- Efficient sealing even at low pressures
- Compact seal
- Easy to assemble
- Excellent abrasion resistance
- Minimum friction level
- Long service life

Please contact us for applications approaching maximum values.

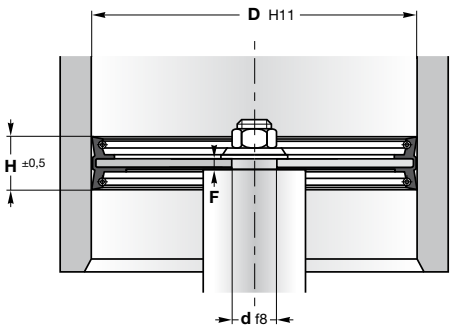
10TDO



Machining of housings: see pages 48-49

10TDO is a complete piston with steel base plate and vulcanised, springloaded sealing lips.

The complete piston is for low duty applications, preferably for spare parts requirement.

The seal can only absorb **low lateral** forces.

Operating conditions	**see page 8**
Pressure	≤ 4 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Seal ①	NBR0083 with carbon steel inside
Core ②	Steel
Spring (2 x) ③	Steel

Assembly	**see pages 54-59**
Mounted with rubber side towards the rod and fixed with screw and washer	

Advantages

Complete piston for lox duty applications

Please contact us for applications approaching maximum values.

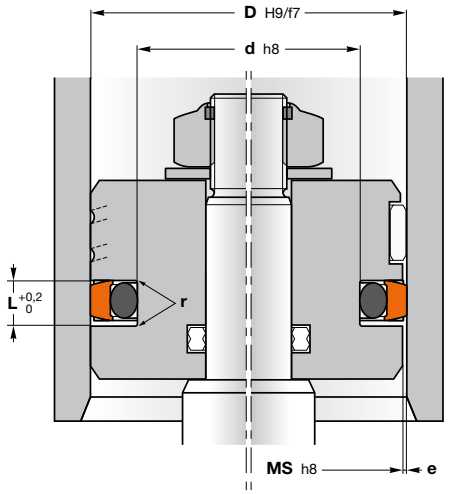
10E/GH



metal guiding || with guide rings

MS = D - 2e

Machining of housings: see pages 48-49

Pressure	10 MPa	20 MPa	30 MPa	40 MPa
L (mm)	**e** (mm)			
2,2	0,35	0,23	0,18	0,15
3,2	0,4	0,25	0,2	0,15
4,2	0,4	0,25	0,2	0,18
6,3	0,45	0,28	0,23	0,18
8,1	0,55	0,35	0,25	0,2
> 40 MPa => **e** = H8/f8				

10E/GH has a dynamic seal element that, due to the special design, improves the pressure distribution and drastically reduces the friction. It is made of a special high resistance polymer.

It increases the performance and service life in applications where properties such as **abrasion resistance** and **tear strength** are critical. Conical shaped notches allow the seal to energise without risk of extrusion of O-ring.

A standard size O-ring with low permanent deformation is the energising component on the static side.

Operating conditions **see page 8**

Pressure	≤ 50 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials **see pages 10-19**

Dynamic sealing element ①	TPE
Energising element ②	NBR 70 Sh A

Assembly **see pages 54-59**

On one-piece pistons

Advantages

- Easy installation on a solid piston
- Returns to the size immediately after assembly
- Low friction and no tendency of stick-slip
- Simple groove design and space-saving construction
- Excellent wear-resistance
- High resistance against extrusion
- Extended service life

Please contact us for applications approaching maximum values.

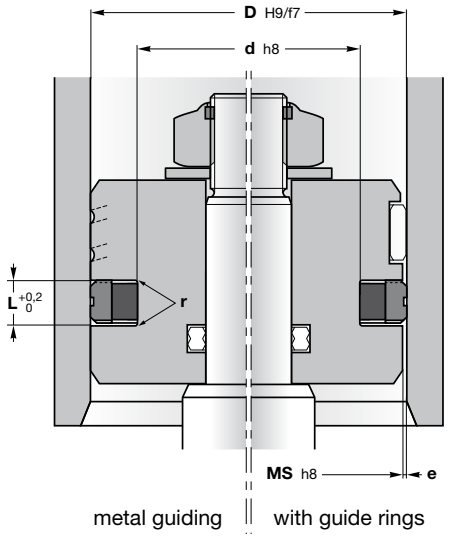
10EPK



metal guiding || with guide rings

MS = D - 2e

Machining of housings: see pages 48-49

Pressure	16 MPa	25 MPa	32 MPa	40 MPa
L (mm)	**e** (mm)			
3,2	≤ 0,3	≤ 0,2		
4,2	≤ 0,4	≤ 0,3	≤ 0,2	
6,3	≤ 0,5	≤ 0,4	≤ 0,3	≤ 0,25
8,1	≤ 0,6	≤ 0,5	≤ 0,4	≤ 0,35

10EPK seal piston ring was developed specifically to be totally interchangeable with the PTFE piston rings. It's a product which can be more readily installed on the pistons and provide longer field service life.

The dynamic surface of the piston ring is **impregnated with molybdenum disulfide** (MoS_2) to reduce the friction.

Radial notches on both sides of the seal ensure a fast **energising** of the sealing element.

Operating conditions	**see page 8**
Pressure	≤ 40 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Dynamic sealing element ①	PU29 + MoS_2
Energising element ②	NBR1970

Assembly	**see pages 54-59**
On one-piece pistons	

Advantages

- Small sections
- High extrusion resistance
- Easy installation on monobloc pistons
- Excellent abrasion resistance and long service life
- Low break-out and running friction

Please contact us for applications approaching maximum values.

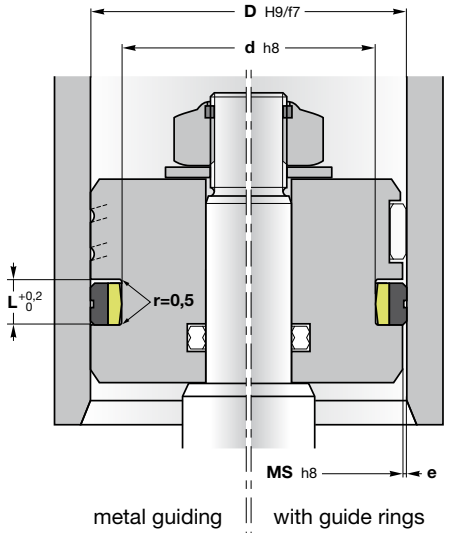
10BFP



MS = D - 2e

Machining of housings: see pages 48-49

Pressure	16 MPa	25 MPa	32 MPa	40 MPa
L (mm)	**e** (mm)			
6,8	≤ 0,5	≤ 0,25	≤ 0,2	≤ 0,15
11,1	≤ 0,6	≤ 0,3	≤ 0,25	≤ 0,2

10BFP is a one piece double acting piston seal. It consists of a dynamic sealing and wear lamina bonded to a static sealing and activation lamina. The material used for the static lamina has a high resilience and extremely low compression set. It functions as a seal energizing spring element and assures positive sealing performance throughout a broad pressure range. The dynamic sealing element is made of a harder material, selected for its high abrasion resistant qualities.

The dynamic surface of the piston ring is **impregnated with molybdenum disulfide** (MoS_2) to reduce the friction.

10BFP can readily be substituted in existing cavities to replace other types of double acting seals. It can easily be installed on one piece pistons and allowed larger tolerances and poorer surface finishes.

Operating conditions	**see page 8**
Pressure	≤ 40 MPa
Temperature	-40°C to 90°C
Speed	≤ 1 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Dynamic sealing element ①	PU27 black (95 Sh A)
Energising element ②	PU28 yellow (57 Sh A)

Assembly	**see pages 54-59**
On one-piece pistons	

Advantages

- Seal is in one piece
- Small sections
- High extrusion resistance
- Easy installation on monobloc pistons
- Excellent abrasion resistance and long service life
- Low break-out and running friction

Please contact us for applications approaching maximum values.

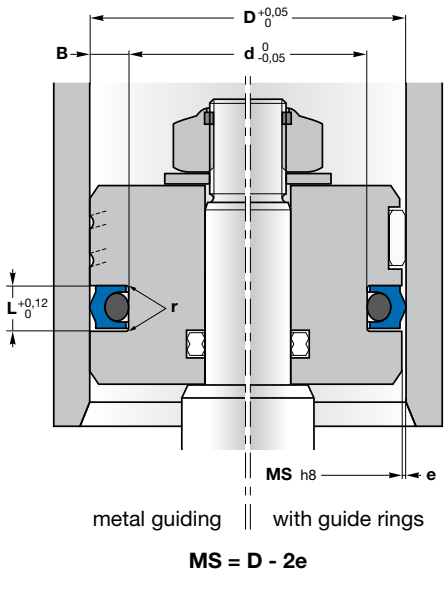
10GPC/I



MS = D - 2e

Machining of housings: see pages 48-49

Pressure	0-16 MPa	17-25 MPa	26-34 MPa
B (mm)	**e** (mm)		
3,1	≤ 0,2	≤ 0,15	-
4,7	≤ 0,3	≤ 0,2	≤ 0,1
6	≤ 0,35	≤ 0,25	≤ 0,15

10GPC/I seals are inch sized, double-acting piston seals with a polyurethane slide ring and a nitrile rubber O-ring energizer. Notches in the slide ring edges enable rapid pressurization of the seal to react quickly to changes in pressure and direction. These profiles can usually be installed without special equipment.

Operating conditions — **see page 8**

Pressure	≤ 34 MPa
Temperature	-30°C to 110°C
Speed	≤ 1 m/s
Fluids	**see pages 22-45**

Materials — **see pages 10-19**

Dynamic sealing element ①	PU
Energising element ②	NBR

Assembly — **see pages 54-59**

On one-piece pistons

Advantages

- Cost-effective sealing solution
- Suitable for light to medium duty applications
- Available in inch sizes
- Fit O-ring dash-number seal housings
- Small sections
- High extrusion resistance
- Easy installation on monobloc pistons without tools

Please contact us for applications approaching maximum values.

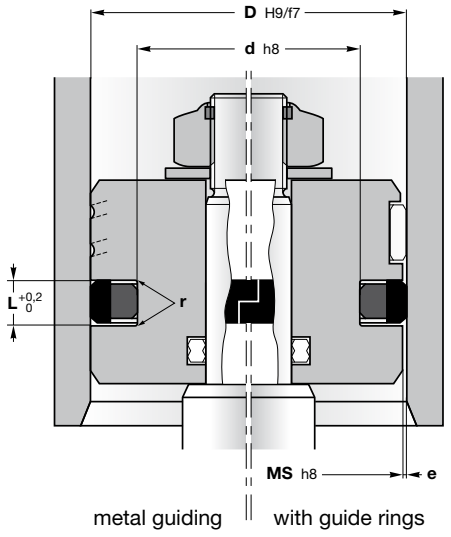
10GPK



metal guiding | with guide rings

MS = D - 2e

Machining of housings: see pages 48-49

Pressure	0-20 MPa	20-50 MPa	50-80 MPa
L (mm)	**e** (mm)		
4,2	≤ 0,5	≤ 0,35	H8/f7
6,3	≤ 0,7	≤ 0,5	
8,1	≤ 0,8	≤ 0,6	

10GPK double acting piston seal is designed for heavy duty applications.

It's easily assembled thanks to the Z-cutted sealing ring.

The **10GPK** has very high extrusion resistance and bigger extrusion gaps are possible compared with PTFE rings.

Operating conditions	**see page 8**
Pressure	≤ 80 MPa
Temperature	-30°C to 100°C
Speed	≤ 1 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Dynamic sealing element ①	PA + glass fibers
Energising element ②	NBR

Assembly	**see pages 54-59**
On one-piece pistons	

Advantages

- Small sections
- Very high extrusion resistance
- Easy installation on monobloc pistons without tools
- Excellent abrasion resistance and long service life
- Low break-out and running friction
- Resistent against shock loads

Please contact us for applications approaching maximum values.

More information

On **www.sealtech-business.be**, click first on the reference and then on the material code to obtain the data sheet of the different materials.

10E/GR...A piston seal is a bi-directional piston seal for use in low to medium duty hydraulic systems.

The dynamic seal element offers exceptional low friction, high speed performances and high chemical compatibility. Side grooves ensure that pressure loads the energising component in all work conditions.

The seal is **commonly used** in applications such as mobile hydraulics, machine tools, injection moulding machines and hydraulic presses.

Radial notches on both sides of the seal ensure a fast **energising** of the sealing element.

Operating conditions	**see page 8**
Pressure	≤ 50 MPa
Temperature	-30°C to 100°C
Speed	≤ 15 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Dynamic sealing element ①	
10E/GR...A	PT55
10E/GR...A	PT15
15E/GR...A	PT53
Energising element ②	NBR 70 Sh A

Assembly	**see pages 54-59**
On one-piece pistons	

Advantages

- Small sections and simple groove design
- High extrusion resistance and long service life
- Low break-out and running friction
- Compatibility with nearly all media due to the high chemical resistance of the sealing element and the wide selection of O-ring compounds
- No stick-slip

Please contact us for applications approaching maximum values.

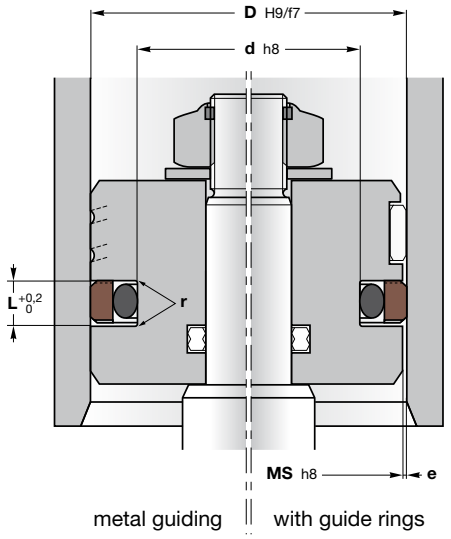
10E/GRINCH...A

Example of item code

10E/GRINCH - P 3000 A

- 10E/GRINCH: Sealtech code
- P: Serie
- 3000: Diameter **D** (inch x 1000)
- A: Profile



MS = D - 2e

Machining of housings: see pages 48-49

10E/GRINCH...A piston seal is a bi-directional piston seal for use in low to medium duty hydraulic systems.

The dynamic seal element offers exceptional low friction, high speed performances and high chemical compatibility. Side grooves ensure that pressure loads the energising component in all work conditions.

The seal is **commonly used** in applications such as mobile hydraulics, machine tools, injection moulding machines and hydraulic presses.

Radial notches on both sides of the seal ensure a fast **energising** of the sealing element.

Operating conditions	**see page 8**
Pressure	≤ 50 MPa
Temperature	-30°C to 100°C
Speed	≤ 15 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Dynamic sealing element ①	PT55
Energising element ②	NBR 70 Sh A

Assembly	**see pages 54-59**
On one-piece pistons	

Advantages

- Small sections and simple groove design
- High extrusion resistance and long service life
- Low break-out and running friction
- Compatibility with nearly all media due to the high chemical resistance of the sealing element and the wide selection of O-ring compounds
- No stick-slip

Please contact us for applications approaching maximum values.

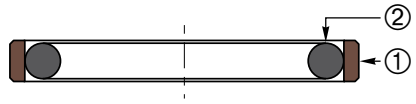
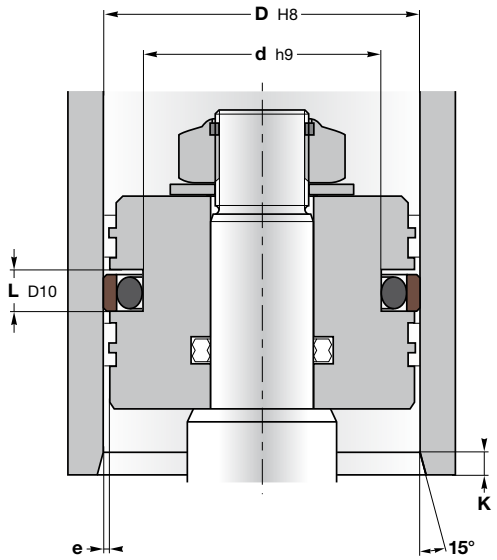
All other dimensions from series 10E/GR, 10E/GR-L and 10E/GR-P are also available with FPM O-rings.

11E/GR...A seals with diameters between 20 and 1500 mm can be manufactured within short delivery time.
For prices and availability: **www.sealtech-business.be**



12GODA



Machining of housings: see pages 48-49

Standard version rod Ø	Groove Ø	Groove width	Gap size	
			e (mm)	
D (mm)	**d** (mm)	**L** (mm)	0 - 20 MPa	20 - 36 MPa
22 - 99	**D** - 8	4	≤ 0,2	≤ 0,15
100 - 149	**D** - 12	6	≤ 0,3	≤ 0,2
150 - 499	**D** - 16	8	≤ 0,4	≤ 0,2
500 - 1000	**D** - 20	10	0,4 - 0,5	≤ 0,25

The **12GODA** is a compact seal for cylinder pistons. It can be used for simple and light-duty cylinder designs used in medium pressure ranges.

The sealing effect is provided by the slide ring being pressed against the sealing surface by the O-ring energiser at pressure. The surface finish should be Ra 0.1 - 0.3 µm.

Compact design, good sliding properties and low break-away forces are the main features of this doubleacting seal.

Operating conditions	**see page 8**
Pressure	≤ 36 MPa
Temperature	-35°C to 100°C
Speed	≤ 1 m/s
Fluids	**see pages 22-45**
Materials	**see pages 10-19**
Energising element ①	NBR
Slide ring ②	PTFE-Bronze
Assembly	**see pages 54-59**
On one-piece pistons	

Advantages

- Small sections and simple groove design
- High extrusion resistance and long service life
- Low break-out and running friction
- Compatibility with nearly all media due to the high chemical resistance of the sealing element and the wide selection of O-ring compounds
- No stick-slip

Please contact us for applications approaching maximum values.

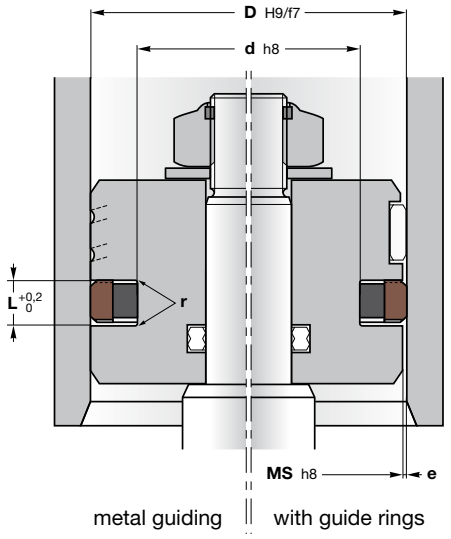
10E/GRKA



MS = D - 2e

Machining of housings: see pages 48-49

Pressure	0-10 MPa	10-20 MPa	20-40 MPa	40-50 MPa
L	**e** (mm)			
3,2	≤ 0,4	≤ 0,25	≤ 0,15	H8/f8
4,2	≤ 0,4	≤ 0,25	≤ 0,2	
6,3	≤ 0,5	≤ 0,3	≤ 0,2	
8,1	≤ 0,6	≤ 0,35	≤ 0,25	

10E/GRKA double acting piston seal consists of a PTFE piston sealing ring and an elastomer square ring as preloading element. The dynamic seal element offers exceptional low friction and high speed perfomances.

The material combination of the slipper ring (PTFE) and the square ring (elastomer) makes this product suitable for a wide range of applications, especially for aggressive media and/or high temperatures. Side grooves ensure that pressure loads the energising component in all work conditions.

The seal is used in control cylinders, in servo controlled systems, machine tools as **quick acting** cylinders.

Radial notches on both sides of the seal ensure a fast **energising** of the sealing element.

Operating conditions	**see page 8**
Pressure	≤ 50 MPa
Temperature	-30°C to 100°C
Speed	≤ 15 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Dynamic sealing element ①	PT55
Energising element ②	NBR1970

Assembly	**see pages 54-59**
On one-piece pistons	

Advantages

- Small sections and simple groove design
- High extrusion resistance and long service life
- Low break-out and running friction
- No stick-slip
- Compatibility with nearly all media due to the high chemical resistance of the sealing element and the wide selection of square-ring compounds

Please contact us for applications approaching maximum values.

The **12GGDA** captive slide comosite seal for outside sealing is a compact element for sealing cylinder pistons. It can be used with mineral oils and in modified form with water based fluids, fire resistant fluids, and compressed air.

The **12GGDA** seal consists of 4 parts, a sharp edged sealing ring of PTFE-Bronze-Compound, 2 L-shaped support rings of POM and an O-ring as energiser.

The L-shaped rings firmly support and guide the slide ring to ensure a tight seal at all times. The slide ring provides the sealing function, being pressed against the cylinder wall by the O-ring energiser. Due to its excellent sliding characteristics, measurable wear cannot be detected even after millions of stroke cycles.

When combined with cylinder tube surface finishes of Ra 0.1 -0.3 µm, static coefficients of friction are in the order of 0.05 to 0.07 at pressures up to 30 MPa. At high speeds, this value increases to slightly above 0.1.

This frictional characteristic means that smooth movement can be achieved even at low speeds. There is no stiction, no unacceptable heat generation, and above all no stick-slip effect.

Operating conditions	**see page 8**
Pressure	≤ 45 MPa
Temperature	-35°C to 100°C
Speed	≤ 1 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Energising element ①	NBR
L-ring ②	POM
Slide ring ③	PTFE-Bronze

Assembly **see pages 54-59**

On one-piece pistons

First insert O-ring and slide ring into the groove then the two split L-rings

Advantages

- Simple groove design
- Small sections
- Extrusion resistance at high pressure
- Excellent abrasion resistance
- Low friction
- No stick-slip

Please contact us for applications approaching maximum values.

10KRGG piston rings from special cast iron material are used in exceptional applications demanding performance in temperature and velocity.

In comparison to other seals, they are not sensitive to pressures peaks.

Operating conditions	**see page 8**
Pressure	≤ 200 MPa
Temperature	-60°C to 250°C
Speed	≤ 40 m/s
Fluids	**see pages 22-45**
Materials	**see pages 10-19**
Sealing element	Cast iron
Assembly	**see pages 54-59**
On one-piece pistons	

Advantages

- Good dynamic sealing
- Perfect extrusion resistance
- Good abrasion resistance
- Long service life
- Extreme temperature range of application
- Overtravelling of cylinder bores possible without damage
- In combination with elastomer seals, this can be put to protective use against pressure peaks and diesel effects

Please contact us for applications approaching maximum values.

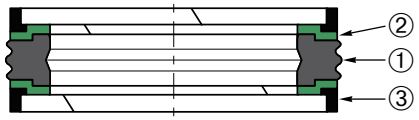
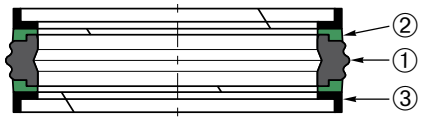
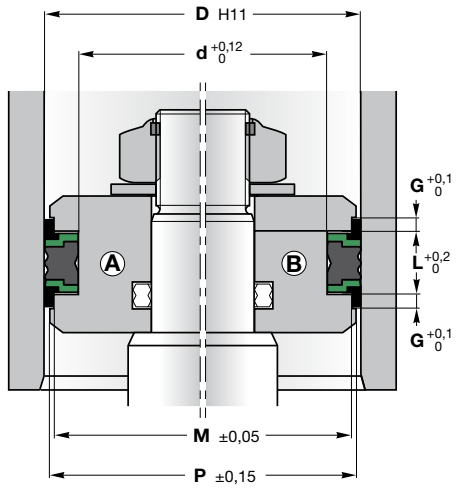
Double acting piston seal with guide rings



10DBS Profile a



10DBS Profile b



Machining of housings: see pages 48-49

10DBS piston seal is a double acting seal and guide element composed of a sealing rubber element, two anti-extrusion rings and two guide rings.

The rubber part has a low compression set which ensures good sealing performance. It is designed with three seal edges which share the load against the cylinder tube. The three seal edges also form two cavities which keep small quantities of fluid that **increase the service life**. The design of the static side provides a wide contact area and prevents distorsion inside the groove during installation.

The back-up rings prevent extrusion into the gap and **avoid the rotation** of the rubber part. The function of the guide rings is to guide the piston in the cylinder tube and to support radial load. This piston seal is available in different profiles depending on the existing installation groove.

Operating conditions	**see page 8**
Pressure	≤ 35 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Seal ①	NBR2475 or NBR3470
Anti-extrusion rings ②	TPE63
Guide rings ③	POM/GF1

Assembly	**see pages 54-59**
On one-piece pistons Ⓐ	
On two-piece pistons Ⓑ	

Advantages

- Efficient sealing at high and low pressure
- Easy installation on monobloc pistons
- Guiding and sealing are performed by the seal
- Good results with drawn tubes
- Simple design for one piece pistons

Please contact us for applications approaching maximum values.

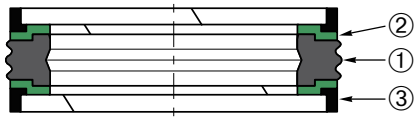
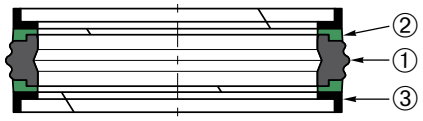
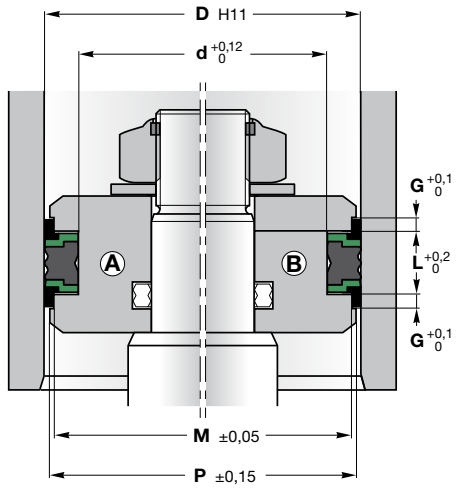
Double acting piston seal with guide rings



10DBS Profile a



10DBS Profile b



Machining of housings: see pages 48-49

10DBS piston seal is a double acting seal and guide element composed of a sealing rubber element, two anti-extrusion rings and two guide rings.

The rubber part has a low compression set which ensures good sealing performance. It is designed with three seal edges which share the load against the cylinder tube. The three seal edges also form two cavities which keep small quantities of fluid that **increase the service life**. The design of the static side provides a wide contact area and prevents distorsion inside the groove during installation.

The back-up rings prevent extrusion into the gap and **avoid the rotation** of the rubber part. The function of the guide rings is to guide the piston in the cylinder tube and to support radial load. This piston seal is available in different profiles depending on the existing installation groove.

Operating conditions	**see page 8**
Pressure	≤ 35 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Seal ①	NBR2475 or NBR3470
Anti-extrusion rings ②	TPE63
Guide rings ③	POM/GF1

Assembly	**see pages 54-59**
On one-piece pistons Ⓐ	
On two-piece pistons Ⓑ	

Advantages

- Efficient sealing at high and low pressure
- Easy installation on monobloc pistons
- Guiding and sealing are performed by the seal
- Good results with drawn tubes
- Simple design for one piece pistons

Please contact us for applications approaching maximum values.

11DBS.../FPM is especially suitable for applications where there is contact with aggressive fuels and chemicals.

The piston seal **11DBS.../FPM** is a double acting seal and guide element composed of a FPM sealing element, two TPE anti-extrusion rings and two POM guide rings.

The piston seal **11DBS.../FPM/PT** is a double acting seal and guide element composed of a FPM sealing element, two PTFE virgin anti-extrusion rings and two PTFE bronze guide rings.

The sealing ring has a low compression set which ensures good sealing performance. It is designed with three seal edges which share the load against the cylinder tube. The three seal edges also form two cavities which keep small quantities of fluid that **increase the service life**. The design of the static side provides a wide contact area and prevents distorsion inside the groove during installation.

The back-up rings prevent extrusion into the gap and **avoid the rotation** of the rubber part. The function of the guide rings is to guide the piston in the cylinder tube and to support radial load. This piston seal is available in different profiles depending on the existing installation groove.

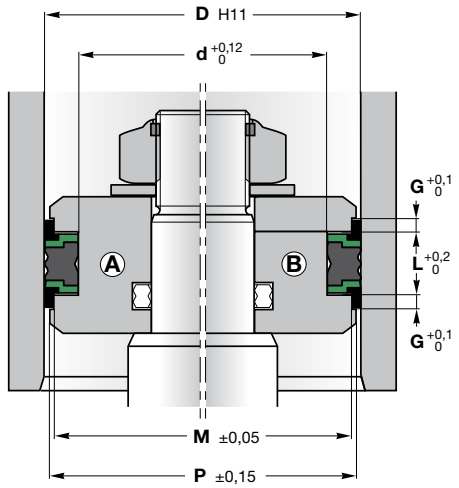
10DBS/I



Machining of housings: see pages 48-49

10DBS/I piston seal is a double acting seal and guide element composed of a sealing rubber element, two anti-extrusion rings and two guide rings.

The rubber part has a low compression set which ensures good sealing performance. It is designed with three seal edges which share the load against the cylinder tube. The three seal edges also form two cavities which keep small quantities of fluid that **increase the service life**. The design of the static side provides a wide contact area and prevents distorsion inside the groove during installation.

The back-up rings prevent extrusion into the gap and **avoid the rotation** of the rubber part. The function of the guide rings is to guide the piston in the cylinder tube and to support radial load. This piston seal is available in different profiles depending on the existing installation groove.

Operating conditions	**see page 8**
Pressure	≤ 35 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Seal ①	NBR
Anti-extrusion rings ②	Polyester resin
Guide rings ③	Acetal resin

Assembly	**see pages 54-59**
On one-piece pistons Ⓐ	
On two-piece pistons Ⓑ	

Advantages

- Efficient sealing at high and low pressure
- Easy installation on monobloc pistons
- Guiding and sealing are performed by the seal
- Good results with drawn tubes
- Simple design for one-piece pistons

Please contact us for applications approaching maximum values.

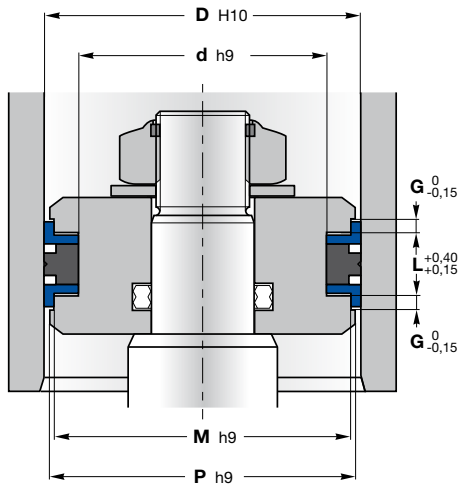
10DCS



Machining of housings: see pages 48-49

10DCS piston seal is a double acting seal and guide element composed of a sealing rubber element, two endless anti-extrusion rings and two guide rings. This piston seal is designed for one piece pistons.

The back-up rings are fitted on the outside diameter of the rubber part and **prevent extrusion** into the gap. The function of the guide rings is to guide the piston in the cylinder tube and to support radial load.

Operating conditions	**see page 8**
Pressure	≤ 25 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Seal ①	NBR
Guide rings ②	Acetal resin
Anti-extrusion rings ③	PTFE

Assembly	**see pages 54-59**
On one-piece pistons	

Advantages

Efficient sealing at high and low pressure
Easy installation on monobloc pistons
Very compact groove dimensions

Please contact us for applications approaching maximum values.

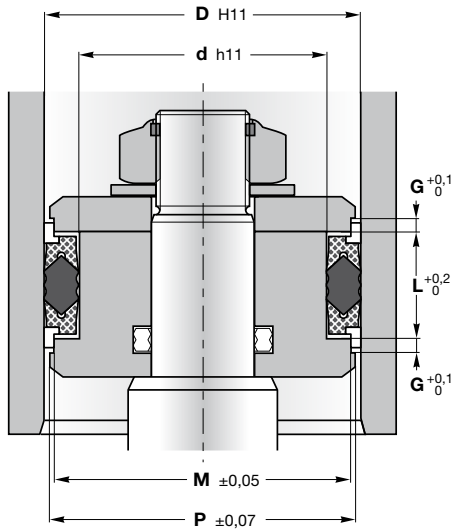
10DSM



Machining of housings: see pages 48-49

10DSM piston seal has been created for high pressure working cylinders. The main sealing element has a low compression set and is designed with seal edges which share the load against the cylinder tube and ensure good sealing performance.

This seal edges also form cavities which keep small quantities of fluid that **reduce friction and wear**. The two support rings are made of cotton fabric reinforced nitrile elastomer. The U-ring is energised when pressure is applied. The guide rings support radial load and also have the function of anti-extrusion rings.

The **Selemaster** is suitable for applications working at high pressures and subjected to severe loading and vibration conditions.

Operating conditions	**see page 8**
Pressure	≤ 70 MPa
Temperature	-40°C to 130°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Seal ①	N8T60 (NBR)
Guide rings ②	PO0WC
Support rings ③	N8T60-C

Assembly	**see pages 54-59**
On two-piece pistons	

Advantages

- Efficient sealing at severe working conditions (vibration and shock loading)
- High resistance against extrusion
- High sealing efficiency

Please contact us for applications approaching maximum values.

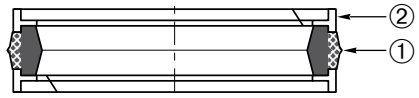
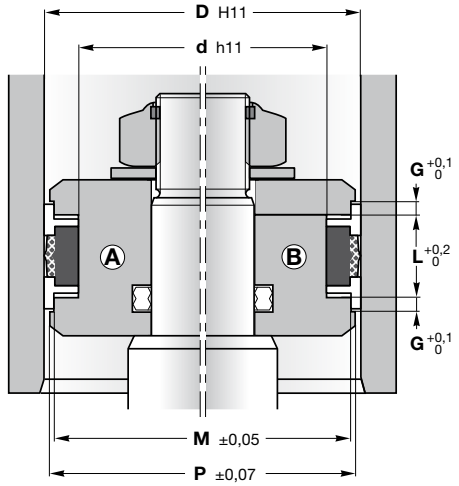
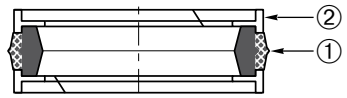
Fabric reinforced NBR piston seal with guide rings

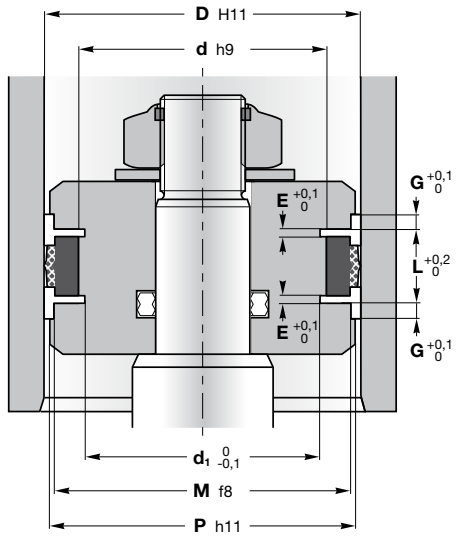


10DPS





10DPS.../SI



Machining of housings: see pages 48-49

10DPS is a double acting piston seal and guide element composed of a sealing rubber reinforced element and two guide rings. The dynamic side of the rubber part is fabric reinforced (fabric reinforced nitrile elastomer has a higher mechanical strength and better lubricating properties).

The section of the seal has been reduced **to optimise** its installation in closed grooves.

Operating conditions	**see page 8**
Pressure	≤ 35 MPa
Temperature	-30°C to 130°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**
Materials	**see pages 10-19**
Seal ①	N8T60-C/N8T60
Guide rings ②	PO0WC
Assembly	**see pages 54-59**
On one-piece pistons Ⓐ	
On two-piece pistons Ⓑ	

Advantages

- Good sealing effect
- Compact groove dimensions
- Guiding and sealing are performed by the seal
- Low friction

Please contact us for applications approaching maximum values.

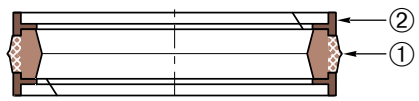
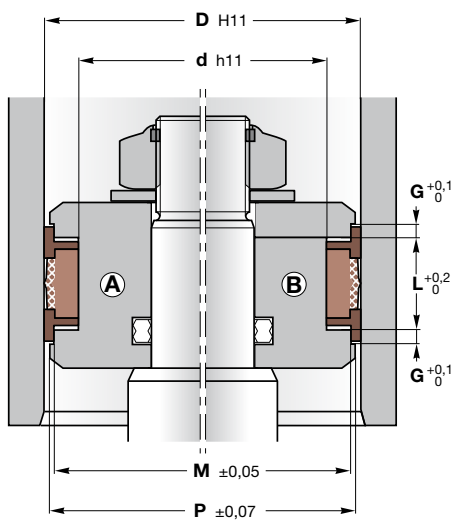
FPM-C piston seal with guide rings



11DPS...FPM-C



Machining of housings: see pages 48-49

11DPS.../FPM-C is a double acting piston seal and guide element composed of a sealing rubber reinforced element and two guide rings. The dynamic side of the rubber part is fabric reinforced (fabric reinforced fluoro elastomer has a higher mechanical strength and better lubricating properties).

The section of the seal has been reduced to optimise its installation in closed grooves. The **11DPS.../FPM-C** is especially suitable for applications where there is contact with aggressive fuels and chemicals or at high temperature up to 150°C.

Operating conditions	**see page 8**
Pressure	≤ 35 MPa
Temperature	-10°C to 150°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**
Materials	**see pages 10-19**
Seal ①	FPM8580/FPM8471-C
Guide rings ②	PTFE + bronze
Assembly	**see pages 54-59**
On one-piece pistons Ⓐ	
On two-piece pistons Ⓑ	

Advantages

Good sealing effect
Compact groove dimensions
Guiding and sealing are performed by the seal
Low friction
High chemical compatibility
Up to 150°C

Please contact us for applications approaching maximum values.

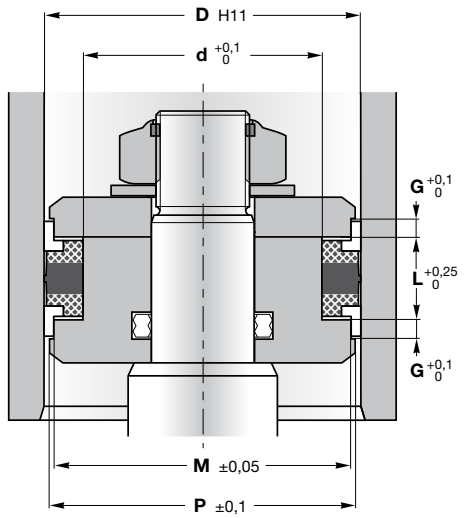
10D11W



Machining of housings: see pages 48-49

10D11W is a double acting seal and guide element composed of a sealing rubber reinforced element and two guide rings. It has been designed for a use on high pressure working split pistons.

The fabric reinforced part of the rubber is on both side of the seal. The guide rings are fitted on the outside diameter of the reinforcement and prevent extrusion into the gap.

The acetal resin guide rings also support the piston head under side load conditions thus **preventing metal to metal contact**. The rubber fabric allows a higher mechanical strength, reduce friction and wear.

Operating conditions	**see page 8**
Pressure	≤ 50 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Seal ①	N8T60/N8T60-C
Guide rings ②	PO0WC

Assembly	**see pages 54-59**
On two-piece pistons	

Advantages

- Efficient sealing at high and low pressure
- High pressure
- Good price-performance ratio
- High resistance against extrusion

Please contact us for applications approaching maximum values.

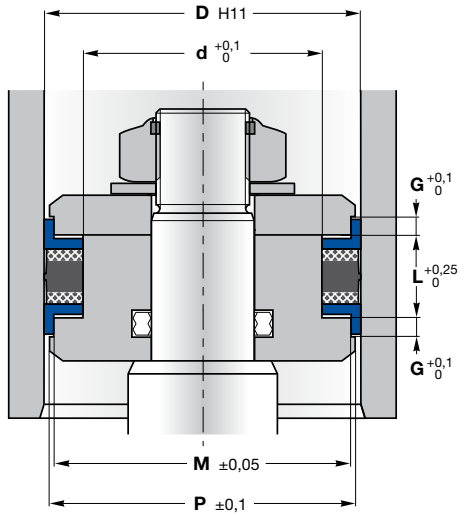
Fabric reinforced piston seal with guide rings

10D11W.../H



Machining of housings: see pages 48-49

10D11W.../H is a double acting seal and guide element composed of a sealing rubber reinforced element and two guide rings. It has been designed for a use on high pressure working split pistons. The fabric reinforced part of the rubber is on both side of the seal.

10D11W.../H is characterised by the long sided L-profiles of the guide rings and prevent extrusion into the gap. The polyacetal bearing rings also support the piston head under side load conditions thus preventing metal to metal contact. The rubber fabric allows a higher mechanical strength, reduce friction and wear.

Operating conditions	**see page 8**
Pressure	≤ 40 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**
Materials	**see pages 10-19**
Seal ①	NBR with fabric reinforcement
Guide rings ②	Acetal resin
Assembly	**see pages 54-59**
On two-piece pistons	

Advantages

- Efficient sealing at high and low pressure
- High pressure
- Good price-performance ratio
- High resistance against extrusion

Please contact us for applications approaching maximum values.

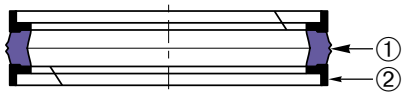
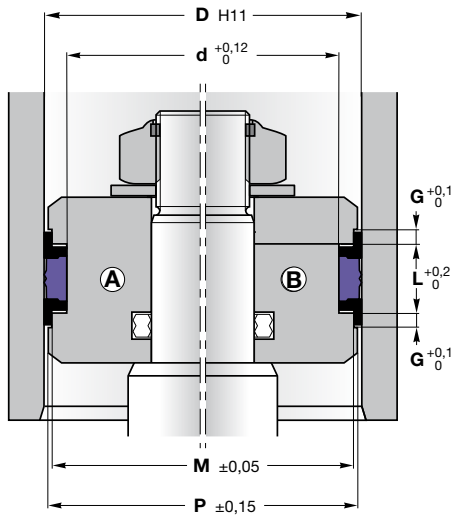
PU double acting piston seal with guide rings



10EUD.../P



Machining of housings: see pages 48-49

10EUD.../P is a double acting seal and guide element composed of a polyurethane sealing element in the middle and two guide ring. Back-up rings are unnecessary thanks to the high extrusion resistance of the polyurethane.

The **special shaped polyurethane ring** reduces the friction and extends the service life of the seal.

Operating conditions	**see page 8**
Pressure	≤ 40 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Dynamic sealing element ①	PU09
Guide rings ②	POM/GF1

Assembly	**see pages 54-59**
On one-piece pistons Ⓐ	
On two-piece pistons Ⓑ	

Advantages

- Efficient sealing at high and low pressure
- Excellent abrasion resistance
- Extended service life
- Easy to assemble on monobloc pistons
- Small sections

Please contact us for applications approaching maximum values.

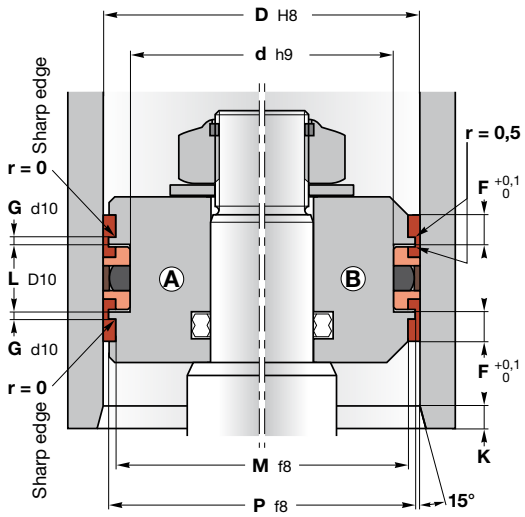
12GD1000K

12GD1000K...FPM
with seal ① in FPM



Machining of housings: see pages 48-49

More information

On **www.sealtech-business.be**, click first on the reference and then on the material code to obtain the data sheet of the different materials.

12GD1000K slide ring piston seal type is used to seal and guide pistons on double acting hydraulic cylinders. The seal design and materials used make it particularly suitable for the most vigorous applications e.g. construction machine cylinders.

The seal can be used in standard form with mineral oils and water base fluids. Modified versions are available for use with other fluids.

12GD1000K consists of 6 parts, a special shaped elastic ring of a modified NBR, a slide ring of abrasion resistant PTFE-Bronze compound which acts as the sealing ring, two lateral support rings of modified TPE and two bearing rings of pressure-resistant POM-PTFE-Bronze compound.

The elastic ring energises the slide ring to press it against the cylinder wall, providing a sealing function at zero working pressure. The onset of pressure compresses the elastic ring which increases the radial force pressing the slide ring against the cylinder wall, thereby **increasing the sealing effect**.

The two support rings prevent gap extrusion of the slide ring at **high pressures**. The special profile of the support rings encourages uniform fluid and pressure distribution to the elastic inner ring.

The bearing rings positioned on the support rings, make contact with the cylinder wall; there is **no metallic contact** between the piston and the cylinder tube.

Operating conditions see page 8

Pressure	
Construction Ⓐ	≤ 63 MPa
Construction Ⓑ	≤ 36 MPa
Temperature	-30°C to 120°C
Speed	≤ 1 m/s

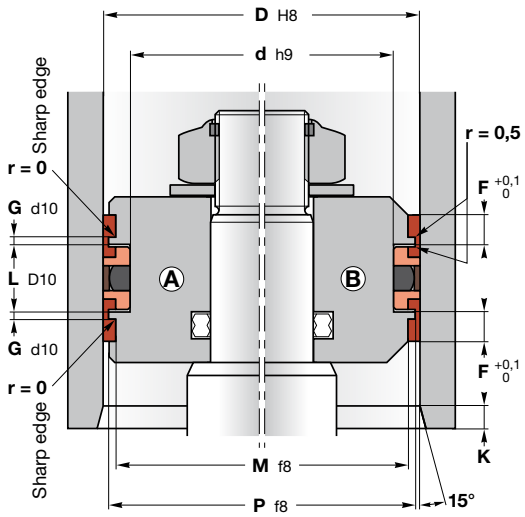
12GD1000K...FPM
with seal ① in FPM



Machining of housings: see pages 48-49

More information

On **www.sealtech-business.be**, click first on the reference and then on the material code to obtain the data sheet of the different materials.

12GD1000K slide ring piston seal type is used to seal and guide pistons on double acting hydraulic cylinders. The seal design and materials used make it particularly suitable for the most vigorous applications e.g. construction machine cylinders.

The seal can be used in standard form with mineral oils and water base fluids. Modified versions are available for use with other fluids.

12GD1000K consists of 6 parts, a special shaped elastic ring of a modified NBR, a slide ring of abrasion resistant PTFE-Bronze compound which acts as the sealing ring, two lateral support rings of modified TPE and two bearing rings of pressure-resistant POM-PTFE-Bronze compound.

The elastic ring energises the slide ring to press it against the cylinder wall, providing a sealing function at zero working pressure. The onset of pressure compresses the elastic ring which increases the radial force pressing the slide ring against the cylinder wall, thereby **increasing the sealing effect**.

The two support rings prevent gap extrusion of the slide ring at **high pressures**. The special profile of the support rings encourages uniform fluid and pressure distribution to the elastic inner ring.

The bearing rings positioned on the support rings, make contact with the cylinder wall; there is **no metallic contact** between the piston and the cylinder tube.

Operating conditions	**see page 8**
Pressure	
Construction Ⓐ	≤ 63 MPa
Construction Ⓑ	≤ 36 MPa
Temperature	-30°C to 120°C
Speed	≤ 1 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Guide rings ①	POM-PTFE bronze compound FPM: other operating conditions
Anti-extrusion rings ②	
Ø 40 to 180 mm	TPE
> Ø 180 mm	POM or PA
Dynamic sealing element ③	PTFE-bronze
Energising element ④	NBR

Assembly	**see pages 54-59**
On one-piece pistons	

Advantages

- Efficient sealing at low and high pressures
- Compact seal
- Easy installation on monobloc pistons
- Excellent abrasion resistance
- Guiding and sealing are performed by the seal

Please contact us for applications approaching maximum values.

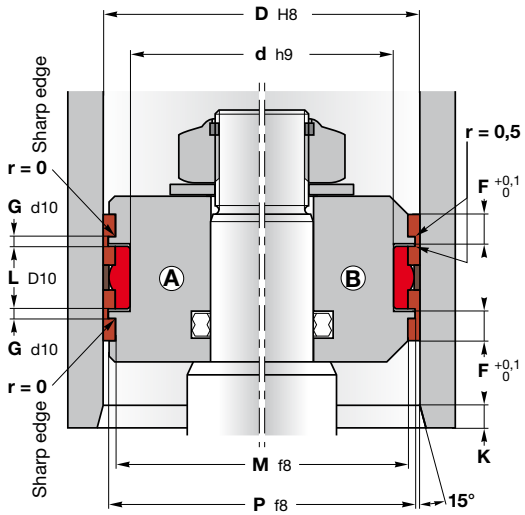
12GKD



Machining of housings: see pages 48-49

12GKD compact slide ring seal type is used to seal and guide pistons on double acting hydraulic cylinders (in standard form it is suitable for use with all mineral oils).

12GKD consists of 4 parts, an elastic inner ring of PUR, a slide ring of abrasion-resistant PTFE-Bronze compound and two bearing rings of a pressure-resistant POM-PTFE-Bronze compound.

The guide rings make contact with the cylinder wall ; there is no metallic contact between the piston and the cylinder body.

The internal elastic ring energises the slide ring to press it against the cylinder wall providing a sealing function at zero pressure. The onset of pressure compresses the elastic ring increasing the radial forces acting on the slide ring, thereby **increasing the sealing effect**.

Like the slide ring, the two bearing rings also sit on the elastic ring. The pressure-induced compression of the internal ring forces the two bearing rings, and the slide ring, against the cylinder wall so that there is **zero clearance** between bearing rings and cylinder wall. Even if the cylinder tube expands under pressure, the seal will adapt to the radial deformation maintaining both zero gap and the sealing function.

Operating conditions	**see page 8**
Pressure	
Construction Ⓐ	≤ 63 MPa
Construction Ⓑ	≤ 36 MPa
Temperature	-35°C to 100°C
Speed	≤ 1 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Guide rings ①	POM-PTFE bronze compound
Dynamic sealing element ②	PTFE-bronze
Energising element ③	PU

Assembly	**see pages 54-59**
On one-piece pistons	

Advantages

- Efficient sealing at low and high pressures
- Compact seal : no loss of space
- Low friction
- Easy installation on monobloc pistons
- Guiding and sealing are performed by the seal
- Excellent abrasion resistance

Please contact us for applications approaching maximum values.

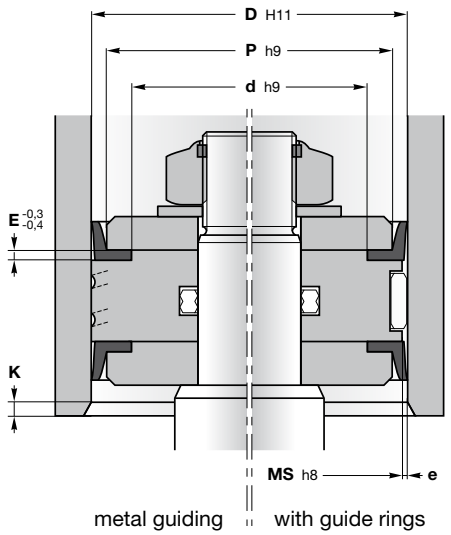
10DC



K = 0,35 H

e ≤ 0,3 mm

Machining of housings: see pages 48-49

10DC is a single acting piston seal primarily used on piston heads, plungers or rams in hydraulic or pneumatic and designed for split pistons.

Piston cups are recommended to handle **low pressures** in air, water, hydraulic fluids, and lubricating oils.

Piston cups are commonly used because of economical cost, efficient assemble, universal acceptance, and simple accessories.

Operating conditions	**see page 8**
Pressure	≤ 4 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,25 m/s
Fluids	**see pages 22-45**
Materials	**see pages 10-19**
Seal	NBR8090
Assembly	**see pages 54-59**
On multi-piece pistons	

Advantages

- Low friction
- Easy to assemble
- Good price-performance ratio

Please contact us for applications approaching maximum values.

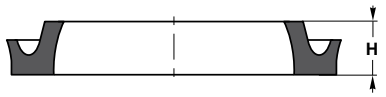
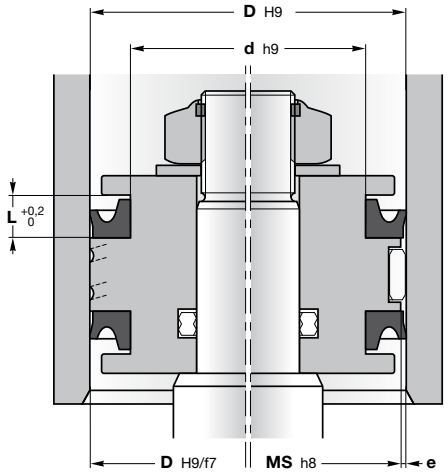
NBR single acting piston seal
Inch dimensions



10DDE Inch



metal guiding | with guide rings

e (mm) ≤ 0,3 - 0,01 x P (MPa)

MS = D - 2e

Machining of housings: see pages 48-49

10DDE single acting piston seal can be used in hydraulic or pneumatic cylinders.

This NBR profile is designed with a shorter outer sealing lip which ensures low friction and pushes the load against the cylinder tube.

NB: The seal diameters are smaller than the metallic one, but once assembled the seal shows good sealing efficiency.

Operating conditions	**see page 8**
Pressure	≤ 8 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**
Materials	**see pages 10-19**
Seal	NBR8075
Assembly	**see pages 54-59**
On one-piece pistons	

Advantages

- Easy installation on monobloc pistons
- Low friction
- Good price-performance ratio
- Small housing

Please contact us for applications approaching maximum values.

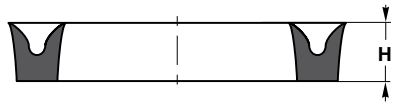
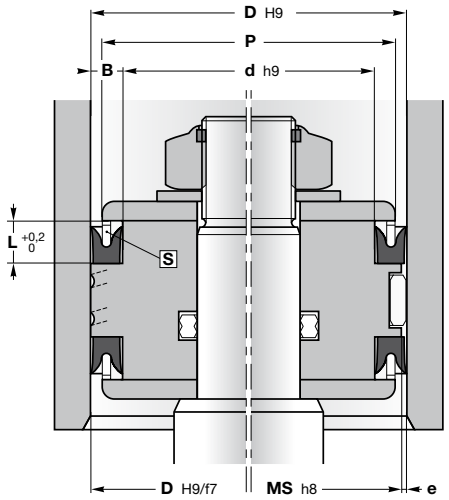
NBR piston seal with symmetrical lips
Metric dimensions



10DUM



metal guiding | with guide rings

P = d + 1,7 B

e (mm) ≤ 0,3 - 0,01 x P (MPa)

MS = D - 2e

Machining of housings: see pages 48-49

10DUM is a symmetrical U-ring with sharp sealing lips. In this case, the sealing edges aren't below the seal height, therefore this profile has to be used with a header ring. The header ring can be made in metal, plastic or in rubber.

This profile is primarily used as piston seal, but it can also be used as rod seal.

10DUM is also suitable for pneumatic applications.

Operating conditions	**see page 8**
Pressure	≤ 10 MPa
Temperature	-15°C to 120°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Seal	NBR8090

Assembly — **see pages 54-59**

On multi-piece pistons

Seals 10DU and 10DUM must be mounted with a header ring [S] to avoid damage on the sealing tip

Attention : SEALTECH doesn't supply these header rings

Advantages

Low friction

Good price-performance ratio

Suitable for rods and pistons

Please contact us for applications approaching maximum values.

NBR piston seal with symmetrical lips

10DUM.../N

metal guiding || with guide rings

P = d + 1,7 B

e (mm) ≤ 0,3 - 0,01 x P (MPa)

MS = D - 2e

Machining of housings: see pages 48-49

10DUM.../N can be used in both rod and piston applications thanks to the symmetrical lip design.

10DUM.../N is also suitable for pneumatic applications.

Operating conditions	**see page 8**
Pressure	≤ 10 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**
Materials	**see pages 10-19**
Seal	NBR8085 or NBR8490
Assembly	**see pages 54-59**
On one-piece pistons	

Advantages

- Low friction
- Good price-performance ratio
- Suitable for rods and pistons

Please contact us for applications approaching maximum values.

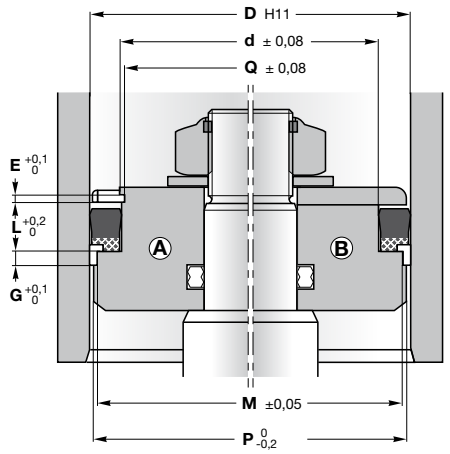
Fabric reinforced single acting piston seal with guide ring

10B.../NWO/KR

10KR



Machining of housings: see pages 48-49

10B.../NWO/KR is composed of an elastomer rubber sealing element, a fabric reinforced base and an angular integrated wear ring which guides the piston in the cylinder and supports radial loads. The fabric reinforced base **prevents the seal from extrusion** and the guide/back-up rings enables higher pressure conditions and minimises the extrusion gap. The sealing element has a low compression set and the sealing lips are produced to give an optimum efficiency.

10B.../NWO/KR is also composed of a keeper ring which helps the assembly in the open groove of the piston seal, especially those with a large radial section.

Operating conditions	**see page 8**
Pressure	≤ 50 MPa
Temperature	-30°C to 120°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Sealing element ①	N8T60/N8T60-C
Keeper ring **10KR** ② as part of **10B.../NWO/KR**	PO0WC
Guide ring ③	PO0WC
Keeper ring **10KR** alone ④	POM24

Assembly	**see pages 54-59**
On one-piece pistons Ⓐ	
On two-piece pistons Ⓑ	

Advantages

- Efficient sealing even at low pressure
- Small section
- Extrusion resistance at high pressure

Please contact us for applications approaching maximum values.

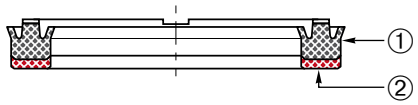
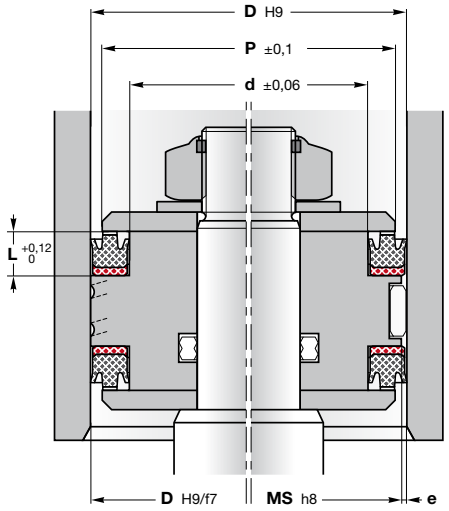
Fabric reinforced piston seal for open groove



10DS.../M



metal guiding | with guide rings

P = D - 3 mm

Standard : e (mm) ≤ 0,15

With POM AE-ring : e (mm) ≤ 0,5

MS = D - 2e

Machining of housings: see pages 48-49

10DS.../M is made of two different parts: the sealing element is realised in an elastomer rubber fabric and the back-up ring is printed with a very rigid special fabric which has a good antiextrusion resistance and assures a long life to seal element.

10DS.../M is generally used in double acting cylinders even for their little encumbrance.

Operating conditions see page 8

Pressure	≤ 40 MPa
Temperature	-40°C to 120°C
Speed	≤ 0,5 m/s
Fluids	see pages 22-"F. Fluid compatibility fin", page 45

Materials see pages 10-19

Sealing element ①	NBR8275-C
Anti-extrusion ring ②	Hard nitrile-fabric **On demand: acetal resin**

Assembly see pages "K. Assembly of seals", page 54-59

On multi-piece pistons

Advantages

Extrusion resistance at high pressure

Space-saving construction

Please contact us for applications approaching maximum values.

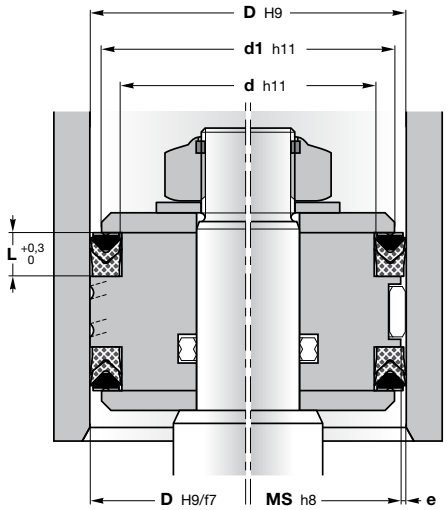
10CH3



d1 = D - 3 mm

e (mm) ≤ 0,15

MS = D - 2e

Machining of housings: see pages 48-49

10CH3 is made of a support ring, one V-shaped sealing element and a pressure energising spreader ring. The base ring manufactured in cotton fabric reinforced rubber for a good anti-extrusion resistance guides and supports the V-ring for effective performance.

The fabric reinforced NBR V-ring is the main sealing element, being sensitive to pressure variations assuring good sealing performances in all conditions.

The energiser ring ensures uniform **pressure distribution** on the other rings. This element is produced in acetal resin.

Operating conditions	**see page 8**
Pressure	≤ 40 MPa
Temperature	-30°C to 120°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
V-ring ①	NBR8470-C
Spreader ring ②	POM84
Base ring ③	NBR8470-C

Assembly	**see pages 54-59**
On multi-piece pistons	

Advantages

- Exceptional resistance to wear
- For difficult operating conditions

Please contact us for applications approaching maximum values.

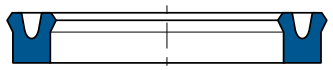
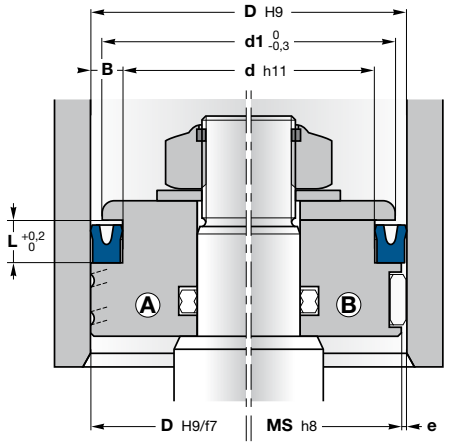
PU piston seal with symmetrical lips



10MU
15MUE ☒ Profile a

10MU ☒ Profile b



d1 = d + 1,4 B

MS = D - 2e

Machining of housings: see pages 48-49

Pressure (MPa)	e (mm)	
	D ≤ 60 mm	**D** > 60 mm
5	≤ 0,4	≤ 0,5
10	≤ 0,3	≤ 0,4
20	≤ 0,2	≤ 0,3
30	≤ 0,15	≤ 0,2
40	≤ 0,1	≤ 0,15

10MU is a high performance symmetrical lipseal which can be used in both rod and piston applications. With a wide range of dimensions, **10MU** has an efficient price-performance ratio.

They are produced in polyurethane that insures excellent wear resistance, extended service life and resistance against extrusion.

Operating conditions	**see page 8**
Pressure	≤ 40 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Seal	PU08, PU09, PU10, PU12 or PU37

Assembly — **see pages 54-59**

On one-piece pistons Ⓐ

On two-piece pistons Ⓑ

Advantages

- Good price-performance ratio
- Symmetrical seal for rods and pistons
- Excellent abrasion resistance
- For new constructions we recommand RSE shape
- For MU seals with profile B, it's possible to put an O-ring between the lips of the seal to obtain the 10EUS profile, only to use in cases of single-acting applications.

Please contact us for applications approaching maximum values.

40	≤ 0,1	≤ 0,15

10MU is a high performance symmetrical lipseal which can be used in both rod and piston applications. With a wide range of dimensions, **10MU** has an efficient price-performance ratio.

They are produced in polyurethane that insures excellent wear resistance, extended service life and resistance against extrusion.

Operating conditions	**see page 8**
Pressure	≤ 40 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Seal	PU08, PU09, PU10, PU12 or PU37

Assembly	**see pages 54-59**
On one-piece pistons Ⓐ	
On two-piece pistons Ⓑ	

Advantages

- Good price-performance ratio
- Symmetrical seal for rods and pistons
- Excellent abrasion resistance
- For new constructions we recommand RSE shape
- For MU seals with profile B, it's possible to put an O-ring between the lips of the seal to obtain the 10EUS profile, only to use in cases of single-acting applications.

- Excellent abrasion resistance
- For new constructions we recommand RSE shape
- For MU seals with profile B, it's possible to put an O-ring between the lips of the seal to obtain the 10EUS profile, only to use in cases of single-acting applications.

Please contact us for applications approaching maximum values.

10MU is a high performance symmetrical lipseal which can be used in both rod and piston applications. With a wide range of dimensions, **10MU** has an efficient price-performance ratio.

They are produced in polyurethane that insures excellent wear resistance, extended service life and resistance against extrusion.

Operating conditions see page 8

Pressure	≤ 40 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	see pages 22-45

Materials see pages 10-19

Seal: PU08, PU09, PU10, PU12 or PU37

Assembly see pages 54-59

On one-piece pistons Ⓐ

On two-piece pistons Ⓑ

Advantages

- Good price-performance ratio
- Symmetrical seal for rods and pistons
- Excellent abrasion resistance
- For new constructions we recommand RSE shape
- For MU seals with profile B, it's possible to put an O-ring between the lips of the seal to obtain the 10EUS profile, only to use in cases of single-acting applications.

Please contact us for applications approaching maximum values.

10MU is a high performance symmetrical lipseal which can be used in both rod and piston applications. With a wide range of dimensions, **10MU** has an efficient price-performance ratio.

They are produced in polyurethane that insures excellent wear resistance, extended service life and resistance against extrusion.

Operating conditions	see page 8
Pressure	≤ 40 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	see pages 22-45

Materials	see pages 10-19
Seal	PU08, PU09, PU10, PU12 or PU37

Assembly	see pages 54-59
On one-piece pistons Ⓐ	
On two-piece pistons Ⓑ	

Advantages

- Good price-performance ratio
- Symmetrical seal for rods and pistons
- Excellent abrasion resistance
- For new constructions we recommand RSE shape
- For MU seals with profile B, it's possible to put an O-ring between the lips of the seal to obtain the 10EUS profile, only to use in cases of single-acting applications.

Please contact us for applications approaching maximum values.

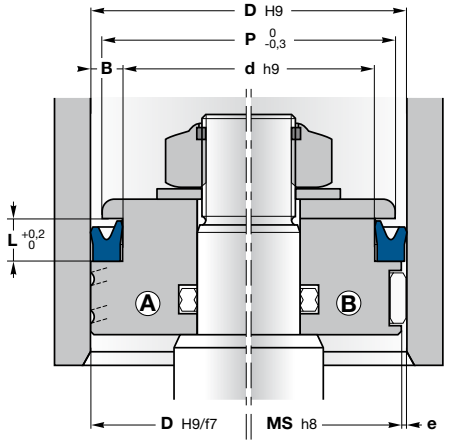
PU single acting piston seal with asymmetrical lips

10RSE

10RSE.../M



metal guiding | with guide rings

P = d + 1,4 B

MS = D - 2e

Machining of housings: see pages 48-49

Pressure (MPa)	e (mm) 10RSE	
	D ≤ 60 mm	**D** > 60 mm
5	≤ 0,4	≤ 0,5
10	≤ 0,3	≤ 0,4
20	≤ 0,2	≤ 0,3
30	≤ 0,15	≤ 0,2
40	≤ 0,1	≤ 0,15

10RSE is designed with a shorter and stronger outer sealing lip to concentrate the load against the dynamic surface.

The sealing lip on the static side is longer to provide a wide contact area and more flexible, therefore more sensitive to pressure fluctuations.

Operating conditions	**see page 8**
Pressure	≤ 40 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Seal	PU09 or PU10

Assembly	**see pages 54-59**
On one-piece pistons Ⓐ	
On two-piece pistons Ⓑ	

Advantages

- Excellent abrasion resistance
- Efficient sealing
- Simple groove design

Please contact us for applications approaching maximum values.

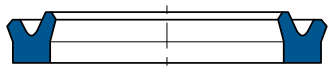
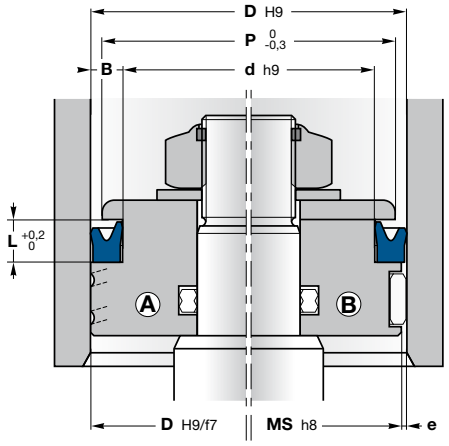
PU single acting piston seal with asymmetrical lips



10RSE

10RSE.../M



P = d + 1,4 B

MS = D - 2e

Machining of housings: see pages 48-49

Pressure (MPa)	e (mm) 10RSE	
	D ≤ 60 mm	**D** > 60 mm
5	≤ 0,4	≤ 0,5
10	≤ 0,3	≤ 0,4
20	≤ 0,2	≤ 0,3
30	≤ 0,15	≤ 0,2
40	≤ 0,1	≤ 0,15

10RSE is designed with a shorter and stronger outer sealing lip to concentrate the load against the dynamic surface.

The sealing lip on the static side is longer to provide a wide contact area and more flexible, therefore more sensitive to pressure fluctuations.

Operating conditions	**see page 8**
Pressure	≤ 40 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Seal	PU09 or PU10

Assembly	**see pages 54-59**
On one-piece pistons Ⓐ	
On two-piece pistons Ⓑ	

Advantages

- Excellent abrasion resistance
- Efficient sealing
- Simple groove design

Please contact us for applications approaching maximum values.

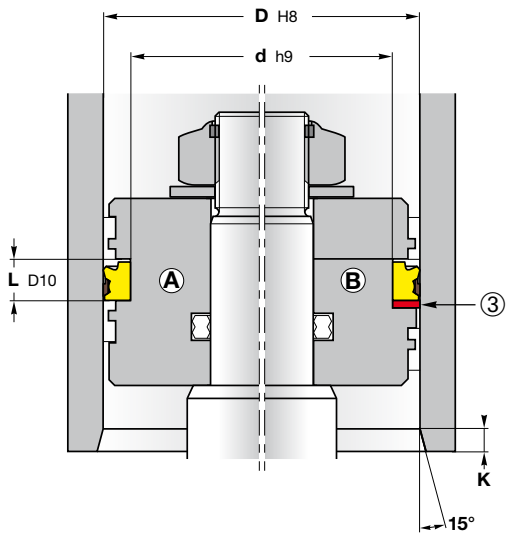
12TDA



Machining of housings: see pages 48-49

Hunger® **12TDA** tandem seal for outside sealing is used to seal pistons, plungers and accumulators. It can be applied with mineral oils and in modified form also with water base fluids, fire resistant fluids, and compressed air.

12TDA seal consists of 2 parts, an elastic ring of PU with a sealing lip and a slide ring of abrasion resistant PTFE-Bronze-compound with a sealing edge.

Prior to fitting, the sealing lip protrudes beyond the nominal diameter of the seal and is pressed against the cylinder wall after fitting. Thus **effective sealing** is provided even at zero pressure.

Operating conditions	**see page 8**
Pressure	
Construction Ⓐ	≤ 36 MPa
Construction Ⓑ	≤ 63 MPa
Temperature	-35°C to 100°C
Speed	≤ 1 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Seal ①	PU
Dynamic sealing element ②	PTFE bronze compound
Anti-extrusion ring ③	POM or PA

Assembly	**see pages 54-59**
On one Ⓐ or two-piece Ⓑ pistons	

Advantages

- Efficient sealing even at low pressures
- Compact seal
- Easy to assemble
- Excellent abrasion resistance
- Minimum friction level
- Long service life

Please contact us for applications approaching maximum values.

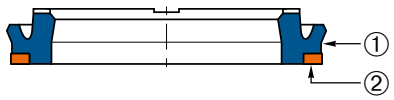
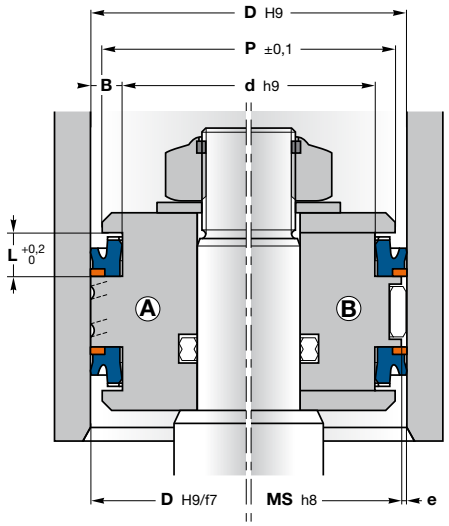
PU single acting piston seal with asymmetrical lips



10RSE.../AE



metal guiding || with guide rings

P = d + 1,7 B

Machining of housings: see pages 48-49

Pressure (MPa)	e (mm) 10RSE.../AE	
	D ≤ 60 mm	**D** > 60 mm
5	≤ 0,6	≤ 0,8
10	≤ 0,6	≤ 0,8
20	≤ 0,4	≤ 0,6
30	≤ 0,3	≤ 0,4
40	≤ 0,2	≤ 0,3
50	≤ 0,1	≤ 0,15

10RSE.../AE is designed with a shorter and stronger outer sealing lip to concentrate the load against the dynamic surface.

The sealing lip on the static side is longer to provide a wide contact area and more flexible, therefore more sensitive to pressure fluctuations.

The anti-extrusion ring enable **higher pressure** conditions and greater extrusion gaps.

Operating conditions — **see page 8**

Pressure	≤ 50 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials — **see pages 10-19**

Seal ① / Anti-extrusion ring ②

PU10 / POM24
PU13 / POM24
PU32 / POM84

Assembly — **see pages 54-59**

On one-piece pistons Ⓐ

On two-piece pistons Ⓑ

Back-to-back mounting on double-acting cylinders only on short-stroke and/or slow-moving cylinders

Advantages

- Excellent abrasion resistance
- Efficient sealing
- Simple groove design
- High extrusion resistance

Please contact us for applications approaching maximum values.

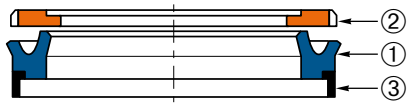
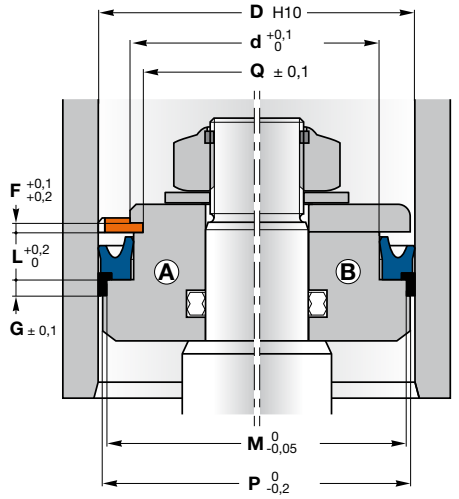
PU single acting piston seal with guide and retaining ring

10RSE.../W



10RSE.../W/AR



Machining of housings: see pages 48-49

10RSE.../W/AR is made of a sealing element in polyurethane, a guide ring and a circlips in POM.

The sealing part is designed with a shorter and stronger outer sealing lip to concentrate the load against the dynamic surface. The sealing lip on the static side is more flexible and longer to provide a wide contact area, therefore more sensitive to pressure fluctuations.

The POM ring guides the piston in the cylinder tube and supports **radial loads**. The retaining ring helps the assembly in the open groove of the piston seal, especially those with a large radial section

Operating conditions	**see page 8**
Pressure	≤ 40 MPa
Temperature	-40°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Seal ①	PU10
Circlips AR ②	POM24
Guide ring ③	POM/GF1

Assembly	**see pages 54-59**
On one-piece pistons Ⓐ	
On two-piece pistons Ⓑ	

Advantages

- Excellent abrasion resistance
- Efficient sealing
- Guiding and sealing are performed by the seal
- Easy installation

Please contact us for applications approaching maximum values.

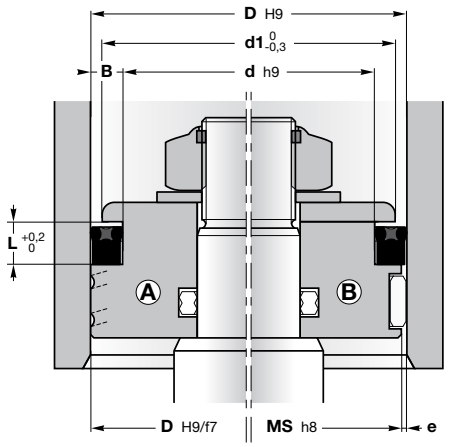
10EUS/I



d1 = d + 1,4 B

MS = D - 2e

Machining of housings: see pages 48-49

10EUS/I is the natural further development of the U-ring.

This profile combines the advantage of a highly elastic rubber and the abrasion resistance of polyurethane. The energising ring guarentees good sealing performance also **at low pressure**. This performance will increase with the pressure.

Operating conditions	**see page 8**
Pressure	≤ 40 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Seal ①	PU45
Energising ring ②	NBR

Assembly	**see pages 54-59**
On one-piece pistons Ⓐ	
On two-piece pistons Ⓑ	

Advantages

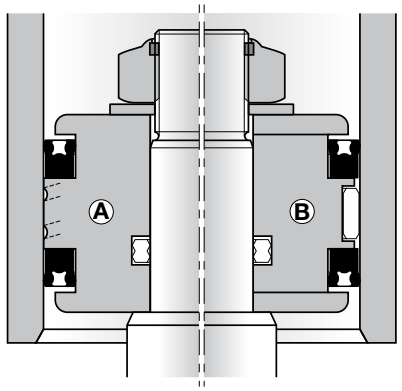
- Efficient sealing at high and low pressure
- Excellent abra sion resistance
- Good price-performance ratio
- Easy installation on monobloc pistons
- Good resistance to clearance extrusion
- Very low compression set due to the Quad-Ring®

Please contact us for applications approaching maximum values.

More information

On **www.sealtech-business.be**, click first on the reference and then on the material code to obtain the data sheet of the different materials.

Pressure (MPa)	**e** (mm)	
	D ≤ 60 mm	**D** > 60 mm
5	≤ 0,4	≤ 0,5
10	≤ 0,3	≤ 0,4
20	≤ 0,2	≤ 0,3
30	≤ 0,15	≤ 0,2
40	≤ 0,1	≤ 0,15



On double acting pistons the seals may be mounted without energising ring to obtain less friction.

For special requirements (fluid, temperature, pressure, speed...) or applications approaching maximum values, please contact us. Other materials available: **FPM**, **HNBR**, **TNBR**, **EPDM**...

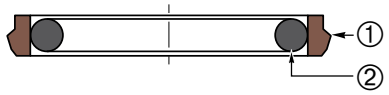
PTFE single acting piston seal with energising ring

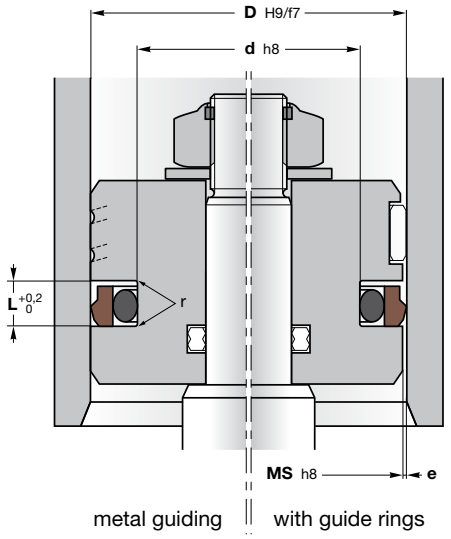


10E/GR...B

Example of item code

10E/GR 0800 B - 55/4470

- 10E/GR: Sealtech code
- 0800: Diameter **D** (mm x 10)
- B: Profile
- 55/4470: Material ①/②



MS = D - 2e

Machining of housings: see pages 48-49

10E/GR...B is a single acting piston seal consisting of a seal ring in PTFE which assures low friction and high speed performance.

The O-ring works as an energising ring and maintains the pressure of the sealing lip against the sliding surface. PTFE has also an excellent chemical resistance, which enables by **changing the O-ring material** (except mineral oils) the use with different type of oils.

Operating conditions	**see page 8**
Pressure	≤ 50 MPa
Temperature	-30°C to 100°C
Speed	≤ 15 m/s
Fluids	**see pages 22-45**
Materials	**see pages 10-19**
Dynamic sealing element ①	PT55
Energising element ②	NBR 70 Sh A
Assembly	**see pages 54-59**
On one-piece pistons	

Advantages

- High speed performance
- Small sections
- High extrusion resistance and long service life
- Low break-out and running friction
- Compatibility with nearly all media due to the high chemical resistance of the sealing element and the wide selection of O-ring compounds
- Large temperature range using the right O-ring

Please contact us for applications approaching maximum values.

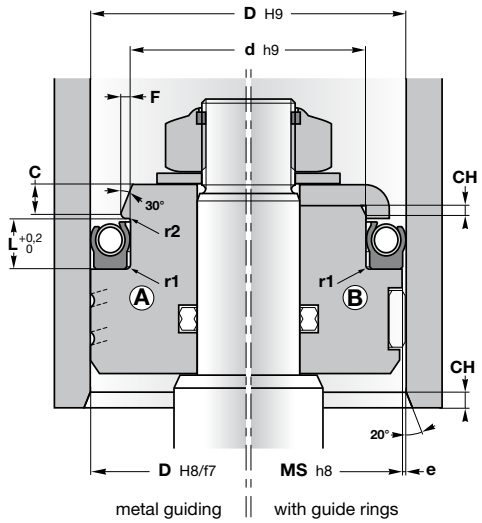
10VOP

Example of item code

10 VOP3 - 0400 - PT02 - SS

- 10: Sealtech code
- VOP3: Profile serie
- 0400: Diameter **d** (mm x 10)
- PT02: Material ①
- SS: Material ②



MS = D - 2e

Machining of housings: see pages 48-49

Please contact us for applications approaching maximum values.

10VOP is a single acting seal consisting of a U-shaped seal jacket and an helicoil corrosion resistant spring.

10VOP has an asymmetric seal profile. The heavy profile of its dynamic lip with an optimised front angle offers good leakage control, reduced friction and long service life. At low and zero pressure, the **metal spring provides** the primary sealing force.

As the system pressure increases, the main sealing force is achieved by the system pressure and ensures a tight seal from zero to high pressure. The possibility of **matching suitable materials for the seal and the spring** allows use in a wide range of applications beyond the field of hydraulics, e.g. in the chemical, pharmaceutical and foodstuffs industry.

Operating conditions see page 8

Pressure	
PT02	≤ 20 MPa
PT01 **on demand**	≤ 20 MPa
PT15 **on demand**	≤ 40 MPa
Temperature	-70°C to 260°C
Speed	≤ 15 m/s
Fluids	see pages 22-45

Materials see pages 10-19

Seal ①	PT02
	On demand: PT01, PT15
Spring ②	AISI 316-1.4401 = SS
	On demand: Elgiloy® (Cr-Co alloy)
	Hastelloy® (Ni-Mo-Cr alloy)

Assembly see pages 54-59

On one-piece pistons Ⓐ

On two-piece pistons Ⓑ

Advantage

Resistant to the most fluids

Low coefficient of friction

High abrasion resistance

No stick-slip: precision of operating control

Small section

Very high temperature range

PT01 and PT02 are FDA compliant

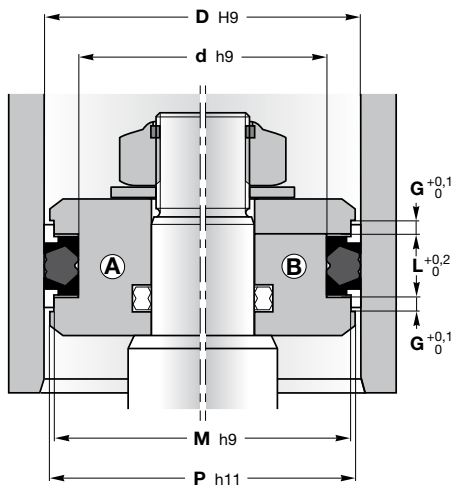
10DBM

Profile c



Machining of housings: see pages 48-49

10DBM piston seal is a double acting seal and guide element composed of a sealing rubber element, two anti-extrusion rings and two guide rings.

The NBR ring has a low compression set which assures good sealing performance. The rubber part is designed with three seal edges which concentrate the load against the cylinder tube. The three seal edges also form two cavities which keep small quantities of fluid that **increase the service life**. The design of the static side provides a wide contact area und prevents distorsion inside the groove during installation.

The back-up rings prevent extrusion into the gap and **avoid the rotation** of the rubber part. The function of the guide rings is to guide the piston in the cylinder tube and to support radial load.

Operating conditions	**see page 8**
Pressure	≤ 35 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Seal ①	N8T60
Anti-extrusion rings ②	PR01N
Guide rings ③	PO0WC

Assembly	**see pages 54-59**
On one-piece pistons Ⓐ	
On two-piece pistons Ⓑ	

Advantages

- Efficient sealing at high and low pressure
- Easy installation on monobloc pistons
- Guiding and sealing are performed by the seal
- Good results with drawn tubes
- Simple groove design for one piece pistons

Please contact us for applications approaching maximum values.

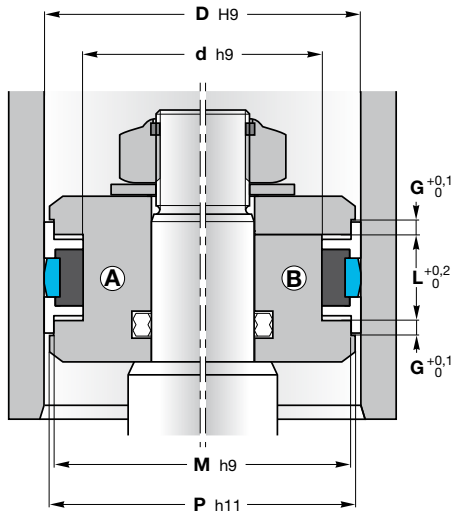
10EUD



Machining of housings: see pages 48-49

This type of seals are double acting piston seals with **integrated guide rings**. They are characterised by the combination of an elastomer energiser and a polyurethane ring that produces a very effective sealing action and extends the service life. The function of the guide rings is to guide the piston in the cylinder tube and to support radial load.

10EUD is designed with T-shaped back-up and guide rings.

Operating conditions	**see page 8**
Pressure	≤ 40 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Dynamic sealing element ①	Z20
Energising element ②	NBR
Guide rings ③	Acetal resin

Assembly	**see pages 54-59**
On one-piece pistons Ⓐ	
On two-piece pistons Ⓑ	

Advantages

- Efficient sealing at high and low pressure
- Excellent abrasion resistance
- Extended service life
- Easy installation on monobloc pistons
- Small sections

Please contact us for applications approaching maximum values.

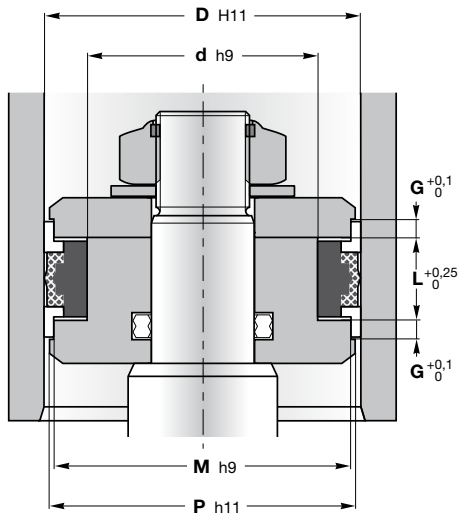
10DPC



Machining of housings: see pages 48-49

10DPC is a double acting seal and guide element composed of a sealing rubber reinforced element and two guide rings.

The dynamic side of the rubber part is fabric reinforced. Fabric reinforced nitrile elastomer has a higher mechanical strength and **better lubricating properties**.

Operating conditions	**see page 8**
Pressure	≤ 50 MPa
Temperature	-30°C to 120°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Seal ①	N8T60-C/N8T60
Guide rings ②	PO0WC

Assembly	**see pages 54-59**
On two-piece pistons	

Advantages

- Efficient sealing at high and low pressures
- Low friction
- High pressure
- For heavy duty application

Please contact us for applications approaching maximum values.

17PT Turcon® **Glyd Ring® T** is a double acting piston seal. Both lateral profile flanks are inclined so that the seal profile tapers towards the seal surface.

The profile can thus retain the robust and compact form typical of piston seals without losing any of the flexibility required to achieve a pressure-related maximum compression. The edge angle created by the special **Glyd Ring® T** crosssectional form permits an additional degree of freedom and enables a slight tilting movement of the seal.

The maximum compression is thus always shifted towards the area of the seal edge directly exposed to the pressure. On the low pressure edge of the seal, the **Glyd Ring® T** exhibts only zones with neutral strains, thus effectively reducing the danger of gap extrusion.

Operating conditions	see page 8
Pressure	≤ 50 MPa
Temperature	-30°C to 100°C
Speed	≤ 15 m/s
Fluids	see pages 22-45
Materials	see pages 10-19
Dynamic sealing element ①	Turcon® T46 **NEW:** Turcon® M12
Energising element ②	NBR 70 Sh A
Assembly	see pages 54-59
On one-piece pistons	

Advantages

- Low running friction
- No Stick-slip
- Long service life
- Small sections
- Compatibility with nearly all media due to the high chemical resistance of the sealing element and the wide selection of O-ring compounds
- Simple groove design
- Large temperature range using the right O-ring

Please contact us for applications approaching maximum values.

17PT Turcon® **Glyd Ring® T** is a double acting piston seal. Both lateral profile flanks are inclined so that the seal profile tapers towards the seal surface.

The profile can thus retain the robust and compact form typical of piston seals without losing any of the flexibility required to achieve a pressure-related maximum compression. The edge angle created by the special **Glyd Ring® T** crosssectional form permits an additional degree of freedom and enables a slight tilting movement of the seal.

The maximum compression is thus always shifted towards the area of the seal edge directly exposed to the pressure. On the low pressure edge of the seal, the **Glyd Ring® T** exhibts only zones with neutral strains, thus effectively reducing the danger of gap extrusion.

Operating conditions	**see page 8**
Pressure	≤ 50 MPa
Temperature	-20°C to 200°C
Speed	≤ 15 m/s
Fluids	**see pages 22-45**
Materials	**see pages 10-19**
Dynamic sealing element ①	Turcon® T46 **NEW:** Turcon® M12
Energising element ②	FPM 75 Sh A
Assembly	**see pages 54-59**
On one-piece pistons	

Advantages

- Low running friction
- No Stick-slip
- Long service life
- Small sections
- Compatibility with nearly all media due to the high chemical resistance of the sealing element and the wide selection of O-ring compounds
- Simple groove design
- Large temperature range using the right O-ring

Please contact us for applications approaching maximum values.

17PSK Stepseal® 2K is a single acting seal element consisting of a seal ring of high-grade Turcon® material and an O-ring as energising element.

Stepseal® 2K was originally developed and patented by Trelleborg Sealing Solutions as a rod seal.

Due to its oustanding properties, however, it is equally well suited as a single acting piston seal where high demands are made on positional accuracy and free movement.

Operating conditions	see page 8
Pressure	Turcon® T46 : ≤ 50 MPa Turcon® T29 : ≤ 30 MPa
Temperature	-30°C to 100°C
Speed	≤ 15 m/s
Fluids	see pages 22-45
Materials	see pages 10-19
Dynamic sealing element ①	Turcon® T46 Turcon® T29 **NEW:** Turcon® M12
Energising element ②	NBR 70 Sh A
Assembly	see pages 54-59
On one-piece pistons

More information

On **www.sealtech-business.be**, click first on the reference and then on the material code to obtain the data sheet of the different materials.

17PSK Stepseal® 2K is a single acting seal element consisting of a seal ring of high-grade Turcon® material and an O-ring as energising element.

Stepseal® 2K was originally developed and patented by Trelleborg Sealing Solutions as a rod seal.

Due to its oustanding properties, however, it is equally well suited as a single acting piston seal where high demands are made on positional accuracy and free movement.

Operating conditions	see page 8
Pressure	Turcon® T46 : ≤ 50 MPa Turcon® T29 : ≤ 30 MPa
Temperature	-20°C to 200°C
Speed	≤ 15 m/s
Fluids	see pages 22-45
Materials	see pages 10-19
Dynamic sealing element ①	Turcon® T46 Turcon® T29 **NEW:** Turcon® M12
Energising element ②	FPM 75 Sh A
Assembly	see pages 54-59
On one-piece pistons	

Advantages

- Low running friction
- No Stick-slip
- Long life
- Small sections
- Compatibility with nearly all media due to the high chemical resistance of the sealing element and the wide selection of O-ring compounds
- Simple groove design
- Large temperature range using the right O-ring

Please contact us for applications approaching maximum values.

17PSV Stepseal® V has the efficient seal performance of the Turcon® Stepseal® range and the reliable prevention of pressure build-up brought by a refined check valve function. In dynamic applications Stepseal® V brings efficient, reliable sealing performance under even the most demanding service conditions.

Stepseal® V offers a uniform, low friction characteristic of the sealing system throughout its whole life, by preventing undefined pressurization of the secondary seal element.

Operating conditions see page 8

Pressure	
17PSV...-M12N	≤ 50 MPa
17PSV...-T46N	≤ 50 MPa
Temperature	-30°C to 100°C
Speed	≤ 15 m/s
Fluids	see pages 22-45

Materials see pages 10-19

Dynamic sealing element ①	
17PSV...-M12N	Turcon® M12
17PSV...-T46N	Turcon® T46
Energising element ②	NBR 70 Sh A

Assembly see pages 54-59

On one-piece pistons

Advantages

- Low running friction
- No Stick-slip
- Long service life
- Small housing and simple groove design
- Check valve function
- Stabilised position in the groove
- Hydrodynamic back-pumping

Please contact us for applications approaching maximum values.

17PQ Turcon® **AQ-Seal®** is a double acting seal consisting of a seal ring of high grade modified Turcon material, a X-ring Seal and an O-ring as energising element.

The Turcon® seal ring and the X-ring Seal together assume the dynamic sealing function whilst the O-ring performs the static sealing function.

The **AQ-Seal®** is supplied as standard with radial notches on both sides. These ensure direct pressurising of the seal under all operating conditions.

The Turcon **AQ-Seal®** is the recommended sealing element for double acting pistons of positioning and holding cylinders.

Operating conditions	**see page 8**
Pressure	with mineral oils: ≤ 40 MPa low lubricating media: ≤ 25 MPa
Temperature	-30°C to 100°C
Speed	≤ 2 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Dynamic sealing element ①	Turcon® T46 **NEW:** Turcon® M12
Dynamic sealing element ②	NBR 70 Sh: Code N
Energising element ③	NBR 70 Sh: Code N

Assembly	**see pages 54-59**
On one-piece pistons	

Advantages

- High sealing effect in applications requiring media separation, e.q. fluid/fluid or fluid/gas
- Low running friction
- Excellent abrasion resistance
- Long service life
- Compatibility with nearly all media due to the high chemical resistance of the sealing element and the wide selection of O-ring compounds
- Simple groove design
- Large temperature range using the right O-ring and X-ring

Please contact us for applications approaching maximum values.

17PQ0 Turcon® **AQ-Seal® 5** is a patended development of the proven standard Turcon® **AQ-Seal®**. Two O-rings are used to energise the seal instead of one.

Turcon® **AQ-Seal® 5** combines the benefits of a low-friction Turcon® slipper seal with the high sealing characteristics of an elastomeric seal by incorporating a X-ring seal in the dynamic sealing face. This optimises leakage control while minimising friction.

The particular characteristics of the **AQ-Seal® 5** are the special seal profile with a defined seal edge and the use of two O-rings as energising elements to optimise the pressure profile and to reduce the force of attack at gas permeability.

Machining of housings: see pages 48-49

17PDD Turcon® **Double Delta®** is a double acting rubber energised plastic faced seal.

The seal is designed to expand and improve the service parameters of O-rings and is installed in existing O-ring grooves.

Double Delta® combines the flexibility and response of O-rings with the wear and friction characteristics of the Turcon materials in dynamic applications. When the system pressure is increased the O-ring transforms this into additional contact pressure, the contact pressures of the seal is thereby automatically adjusted so sealing is ensured under all service condtions.

Operating conditions	**see page 8**
Pressure	≤ 35 MPa
Temperature	-30°C to 100°C
Speed	≤ 15 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Dynamic sealing element ①	Turcon® T46
Energising element ②	NBR 70 Sh: Code N

Assembly	**see pages 54-59**
On one-piece pistons	

Advantage

- Efficient sealing
- Low running friction
- Excellent abrasion resistance
- Long service life
- Compatibility with nearly all media due to the high chemical resistance of the sealing element and the wide selection of O-ring compounds
- Large temperature range using the right O-ring

Please contact us for applications approaching maximum values.

Please contact us for applications approaching maximum values.

17PVA Turcon® **Variseal® M2** is a single acting seal consisting of a U-shaped seal jacket and a V-shaped corrosion resistant spring.

Variseal® M2 has an asymmetric seal profile. The heavy profile of its dynamic lip with an optimised front angle offers good leakage control, reduced friction and long service life. At low and zero pressure, the metal spring provides the primary sealing force.

As the system pressure increases, the main sealing force is achieved by the system pressure and ensures a tight seal from zero to high pressure. The possibility of matching suitable materials for the seal and the spring allows use in a wide range of applications beyond the field of hydraulics, e.g. in the chemical, pharmaceutical and foodstuffs industry.

Operating conditions	see page 8
Pressure	
T40	≤ 40 MPa
T05	≤ 20 MPa
Z80	≤ 40 MPa
Temperature	
T40 / T05	-70°C to 260°C
Z80	-70°C to 80°C
Speed	
T40 / T05	≤ 15 m/s
Z80	≤ 2 m/s
Fluids	see pages 22-45

Materials	see pages 10-19
Seal ①	T40, T05, Z80
Spring ②	AISI 301 = S On demand: Elgiloy®, Hastelloy®

Assembly	see pages 54-59
On one-piece pistons Ⓐ	
On two-piece pistons Ⓑ	

Advantage

- Resistant to the most fluids
- Low coefficient of friction
- High abrasion resistance
- No stick-slip: precision of operating control
- Small section
- Very high temperature range
