✱ See page 8

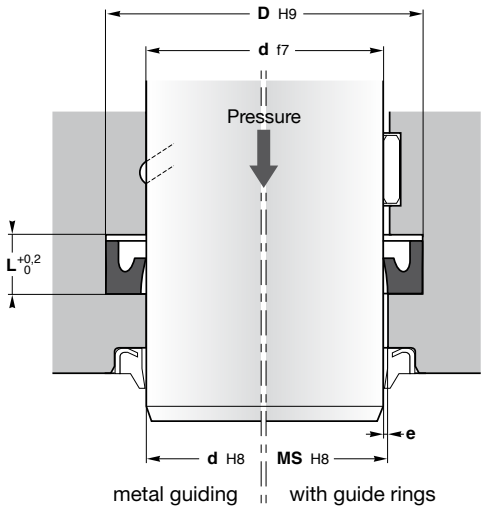
10DDI



e (mm) ≤ 0,3 - 0,01xP (MPa)

MS = d + 2e

Machining of housings: see pages 48-49

10DDI inch rod U-rings are designed with a shorter inner sealing lip.

Only for rod applications (inch dimensions).

Operating conditions see page 8

Pressure	≤ 12 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	see pages 22-45

Materials see pages 10-19

NBR 90 Sh A

Assembly see pages 54-59

In closed grooves

Advantages

Low friction

Good price-performance ratio

Please contact us for applications approaching maximum values.

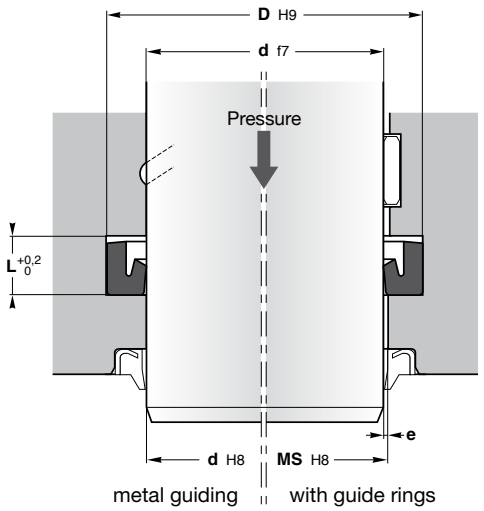
10DDIM.../C



e (mm) ≤ 0,3 - 0,01xP (MPa)

MS = d + 2e

Machining of housings: see pages 48-49

10DDIM.../C single acting rod seal can be used in hydraulic or pneumatic cylinders.

This NBR profile is designed with a shorter inner sealing lip which ensures **low friction**.

Operating conditions	**see page 8**
Pressure	≤ 12 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
	NBR 80 Sh A

Assembly	**see pages 54-59**
In closed grooves	

Advantages

- Easy installation
- Low friction
- Good price-performance ratio
- Compact housing

Please contact us for applications approaching maximum values.

Assembly	**see pages 54-59**
In closed grooves	

Advantages

- Easy installation
- Low friction
- Good price-performance ratio
- Compact housing

Please contact us for applications approaching maximum values.

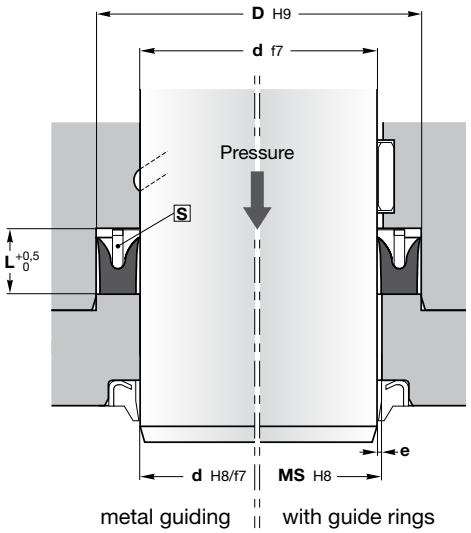
10DUM
10DU

METRIC
INCH



e (mm) ≤ 0,3 - 0,01xP (MPa)

MS = d + 2e

Machining of housings: see pages 48-49

10DUM and **10DU** seals can be used in both rod and piston applications thanks to their symmetrical lip design.

With a wide range of dimensions available, **10DUM** and **10DU** piston/rod seals have an efficient price-performance ratio.

Operating conditions — **see page 8**

Pressure	≤ 12 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials — **see pages 10-19**

NBR 90 Sh A

Assembly — **see pages 54-59**

In open grooves

Seals 10DU and 10DUM must be mounted with a header ring S to avoid damage on the sealing tip

Attention : SEALTECH doesn't supply these header rings

Advantages

Low friction

Can be used for rods and pistons

Please contact us for applications approaching maximum values.

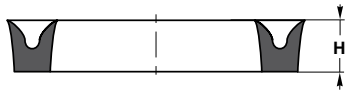
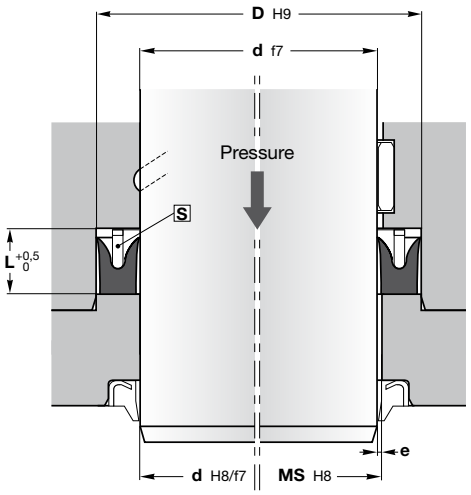
10DUM and 10DU seals with diameters between 20 and 1500 mm can be manufactured within short delivery time.
For prices and availability : **www.sealtech-business.be**



10DUM METRIC
10DU INCH



e (mm) ≤ 0,3 - 0,01xP (MPa)

MS = d + 2e

Machining of housings: see pages 48-49

More information

On **www.sealtech-business.be**, click first on the reference and then on the material code to obtain the data sheet of the material.

10DUM and **10DU** seals can be used in both rod and piston applications thanks to their symmetrical lip design.

With a wide range of dimensions available, **10DUM** and **10DU** piston/rod seals have an efficient price-performance ratio.

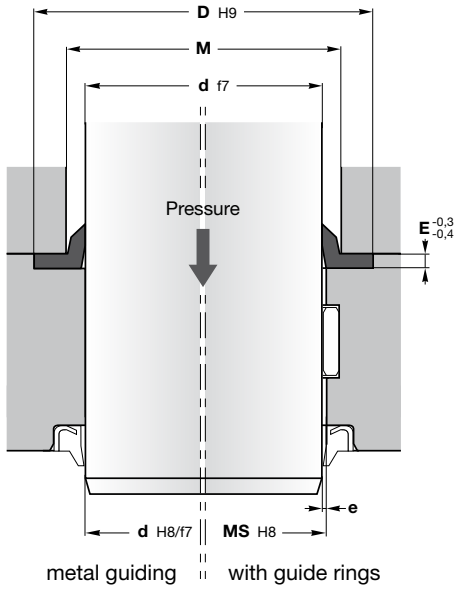
10DH



e (mm) ≤ 0,3 - 0,01xP (MPa)

MS = d + 2e

Machining of housings: see pages 48-49

10DH hat seal is usually fixed in housings with clamp flange.

This seal is mainly used for replacement in old hydraulic and pneumatic cylinders or for secondary applications.

Operating conditions	**see page 8**
Pressure	≤ 4 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
	NBR 90 Sh A

Assembly	**see pages 54-59**
In open grooves	

Advantages

Low friction

Unaffected by deflections of the rod

Please contact us for applications approaching maximum values.

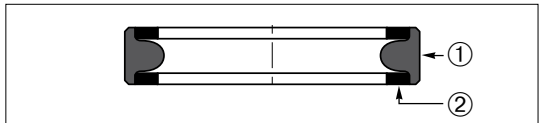
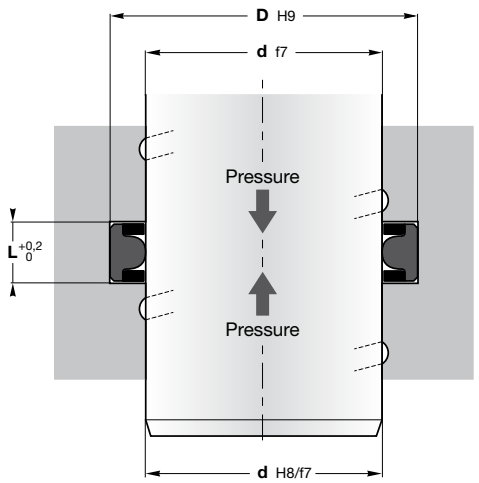
10DH seals with diameters between 20 and 1500 mm can be manufactured within short delivery time.
For prices and availability: **www.sealtech-business.be**



10TRO



Machining of housings: see pages 48-49

10TRO rod T-seal combines a resilient sealing ring with a hard split back-up ring on each side of the sealing element.

Its compact design provides improved stability and extrusion resistance in dynamic fluid sealing applications. The flange or base of the T-seal forms a tight seal in the gland and supports the anti-extrusion back-up rings.

Rod T-seal **eliminates** the spiral or twisting failure that can occur when O-rings are used against a dynamic surface.

Operating conditions	**see page 8**
Pressure	≤ 35 MPa
Temperature	-35°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Seal ①	NBR 70 Sh A
Anti-extrusion ring ②	POM

Assembly	**see pages 54-59**
In closed grooves	

Advantages

- Small section
- Low friction
- High extrusion resistance
- Easy to fit
- Double acting

Please contact us for applications approaching maximum values.

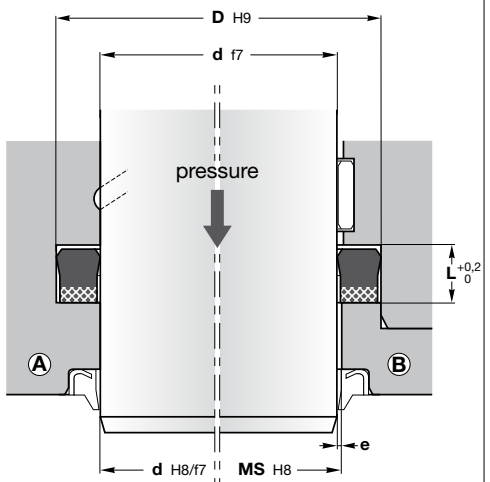
10B



MS = d + 2e

Machining of housings: see pages 48-49

Pressure (MPa)	e (mm)
16	≤ 0,2
25	≤ 0,1

10B is produced in a compact design which guarantees good functioning at low pressures. **10B** has a symmetrical design that allows application as a piston and rod seal.

The resistance to extrusion is obtained by the fabric reinforcement on the opposite side from the pressure.

Operating conditions — see page 8

Pressure	≤ 25 MPa
Temperature	-30°C to 130°C
Speed	≤ 0,5 m/s
Fluids	see pages 22-45

Materials — see pages 10-19

NBR with cotton fabric

Assembly — see pages 54-59

In closed grooves Ⓐ
In open grooves Ⓑ

Advantages

Efficient sealing at low pressure
Easy to fit
Large size range
Small cross sections
Good chemical resistance
Wide temperature range

Please contact us for applications approaching maximum values.

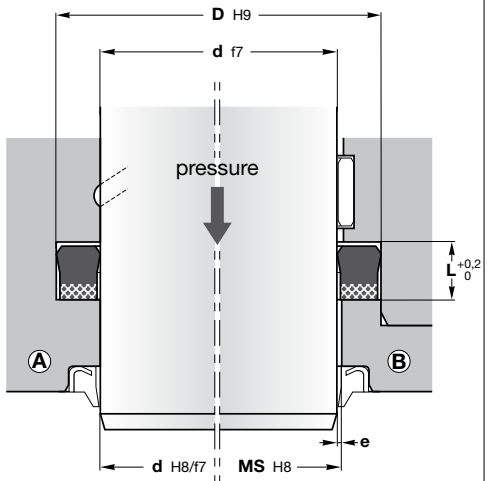
10B



MS = d + 2e

Machining of housings: see pages 48-49

Pressure (MPa)	**e** (mm)
16	≤ 0,2
25	≤ 0,1

10B is produced in a compact design which guarantees good functioning at low pressures. **10B** has a symmetrical design that allows application as a piston and rod seal.

The resistance to extrusion is obtained by the fabric reinforcement on the opposite side from the pressure.

Operating conditions see page 8

Pressure	≤ 25 MPa
Temperature	-30°C to 130°C
Speed	≤ 0,5 m/s
Fluids	see pages 22-45

Materials see pages 10-19

NBR with cotton fabric

Assembly see pages 54-59

In closed grooves Ⓐ
In open grooves Ⓑ

Advantages

Efficient sealing at low pressure
Easy to fit
Large size range
Small cross sections
Good chemical resistance
Wide temperature range

Please contact us for applications approaching maximum values.

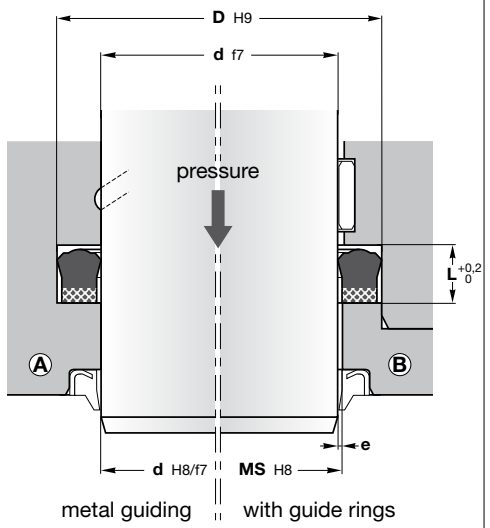
10B.../M



MS = d + 2e

Machining of housings: see pages 48-49

Pressure (MPa)	**e** (mm)
16	≤ 0,2
25	≤ 0,1

The rod seal of the **10B.../M** series is a compact groove ring for the sealing of piston rods and plungers.

The seal is made of NBR fabric with an elastomer element integrated by vulcanization. The fabric reinforcement protects the seals against gap extrusion. Its fine surface structure forms small repositories to store lubricant. The constructive layout of the seal profile results in secure sealing in the low pressure range already.

Operating conditions **see page 8**

Pressure	≤ 25 MPa
Temperature	-30°C to 110°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials **see pages 10-19**

NBR with cotton fabric

Assembly **see pages 54-59**

In closed grooves Ⓐ
In open grooves Ⓑ

Advantages

Efficient sealing at low pressure
Easy to fit
Small cross sections
Good chemical resistance

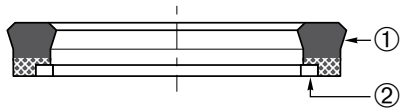
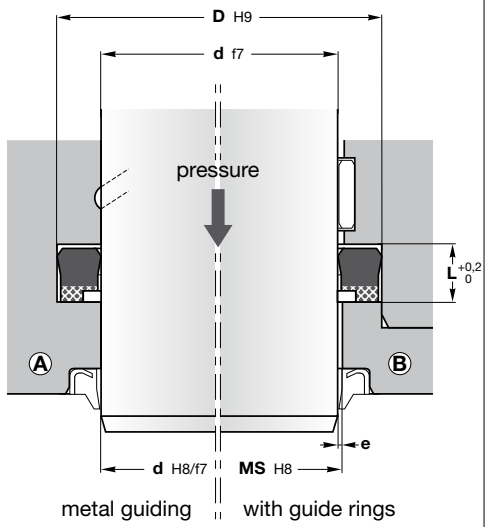
Seals with diameters between 20 and 1500 mm can be manufactured within short delivery time.
For prices and availability: **www.sealtech-business.be**



10B.../NEI



MS = d + 2e

Machining of housings: see pages 48-49

Pressure (MPa)	**e** (mm)
16	≤ 0,4
25	≤ 0,2
40	≤ 0,1

10B.../NEI rod seals are made up of NBR impregnated on cotton fabric which is initially prepared and moulded with NBR material. They are especially designed for rod applications. POM back-up ring provides a high rate of extrusion resistance.

10B.../NEI rod seals with inner dimension smaller than 20 mm are recommended to be mounted in open grooves.

Operating conditions	**see page 8**
Pressure	≤ 40 MPa
Temperature	-30°C to 110°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Seal ①	NBR with cotton fabric
Anti-extrusion ring ②	Acetal resin (POM)

Assembly	**see pages 54-59**
In closed grooves Ⓐ	
In open grooves Ⓑ	

Advantages

- Efficient sealing at low pressure
- Easy to fit
- Large size range
- Small cross sections
- Good chemical resistance
- Wide temperature range
- The integrated anti-extrusion ring prevents the seal material from extrusion at higher pressure

Please contact us for applications approaching maximum values.

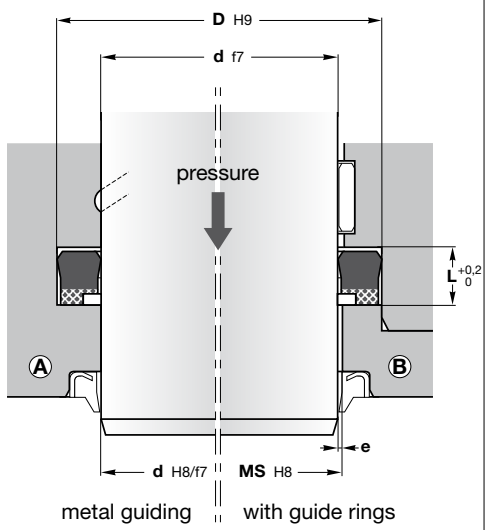
10B.../NEI



MS = d + 2e

Machining of housings: see pages 48-49

Pressure (MPa)	**e** (mm)
16	≤ 0,4
25	≤ 0,2
40	≤ 0,1

10B.../NEI rod seals are made up of NBR impregnated on cotton fabric which is initially prepared and moulded with NBR material. They are especially designed for rod applications. POM back-up ring provides a high rate of extrusion resistance.

10B.../NEI rod seals with inner dimension smaller than 20 mm are recommended to be mounted in open grooves.

Operating conditions	**see page 8**
Pressure	≤ 40 MPa
Temperature	-30°C to 110°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Seal ①	NBR with cotton fabric
Anti-extrusion ring ②	Acetal resin (POM)

Assembly	**see pages 54-59**
In closed grooves Ⓐ	
In open grooves Ⓑ	

Advantages

- Efficient sealing at low pressure
- Easy to fit
- Large size range
- Small cross sections
- Good chemical resistance
- Wide temperature range
- The integrated anti-extrusion ring prevents the seal material from extrusion at higher pressure

Please contact us for applications approaching maximum values.

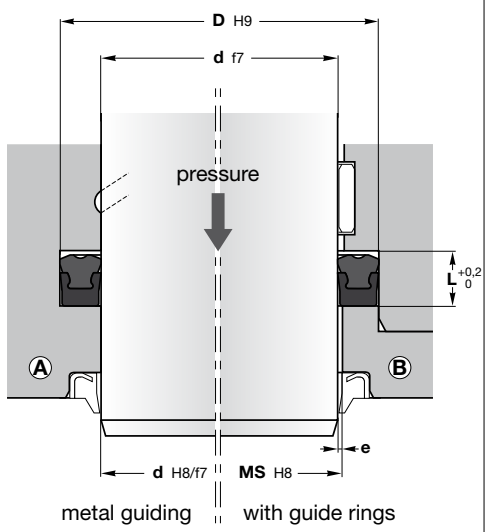
10BLT



MS = d + 2e

Machining of housings: see pages 48-49

Pressure (MPa)	**e** (mm)	
	d ≤ 60 mm	**d** > 60 mm
5	≤ 0,4	≤ 0,5
10	≤ 0,3	≤ 0,4
20	≤ 0,2	≤ 0,3
30	≤ 0,15	≤ 0,2
40	≤ 0,1	≤ 0,15

10BLT consists of a primary nitrile rubber sealing ring and a secondary polyurethane sealing ring.

Hybrid rod seals incorporate dynamic sealing lips of different materials. These material combination provides a hybrid seal with the functional benefit of each material and, therefore, a robust rod seal. An example is the sealing ability and resilience of nitrile rubber (NBR) combined with the extrusion and wear resistance of polyurethane (PU).

10BLT profiles combine an NBR primary sealing ring with a PU secondary sealing ring into one seal. This combination provides a good **low temperature resilience** and is suitable for pressures up to 40 MPa in medium to heavy duty applications.

These SEALTECH hybrid rod seals have been proven successful in low temperature applications. The NBR primary lips also provide improved long term sealing performance and a better capability to larger radial deflections.

Operating conditions	**see page 8**
Pressure	≤ 40 MPa
Temperature	-55°C to 100°C
Speed	≤ 1 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Seal ①	TNBR 70 Sh A
Anti-extrusion ring ②	PU 95 Sh A

Assembly	**see pages 54-59**
In closed grooves Ⓐ	
In open grooves Ⓑ	

Advantages

- Seal for low temperatures
- Efficient sealing at low pressure
- Low friction
- Suitable for medium to heavy duty applications
- Easy to fit

Please contact us for applications approaching maximum values.

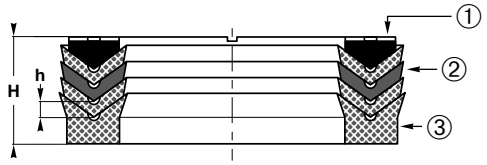
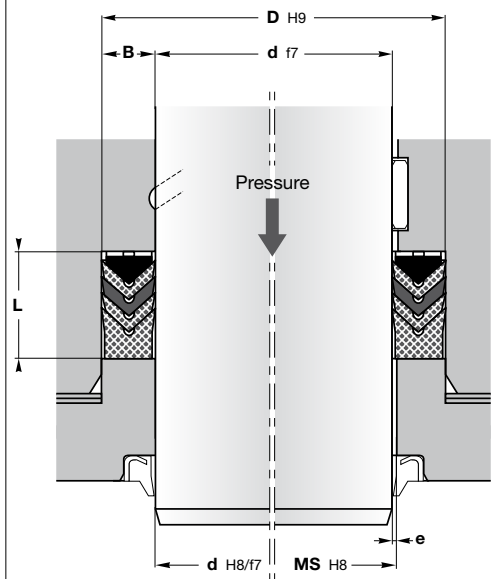
10BLT seals with diameters between 20 and 1500 mm can be manufactured within short delivery time.
For prices and availability: **www.sealtech-business.be**



10CH...(1+3+1)



e ≤ 0,15 mm

MS = d + 2e

Machining of housings: see pages 48-49

10CH is a V-pack rod seal for heavy duty applications offering excellent performance and long life even under difficult conditions such as pressure surges, vibration and some misalignment. The seal consists of a male and female adaptor and three V-rings.

The male adapter or **spreader ring** is usually manufactured in POM but some of the larger sizes are rubberised fabric. It has radial grooves to ensure equal pressure to both sealing edges of the V-ring.

All sizes have **V-rings** manufactured from rubberised fabric increasing strength and durability and allowing an oil film **to lubricate the other parts of the seal**. The smaller sizes are supplied with a rubber V-ring between the rubberised fabric V-rings.

The female adaptor or **base ring** uses a hard rubberised fabric to support the V-rings and protect them from extrusion damage. At high pressure the lips of the base ring act as a secondary seal.

Operating conditions — **see page 8**

Pressure	≤ 40 MPa
Temperature	-30°C to 120°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials — **see pages 10-19**

Spreader ring ①	Acetal resin
V-ring ②	generally: 1 x NBR + 2 x NBR-fabric
Base ring ③	NBR-fabric

Assembly — **see pages 54-59**

In open housings with adjustable length

Advantages

High operating temperature capability

Large range of sizes

For difficult operating conditions: high pressure peaks, bad sliding surfaces, ...

Adjustable

Not sensitive to contamination of the medium

Please contact us for applications approaching maximum values.

More information

On **www.sealtech-business.be**, click first on the reference and then on the material code to obtain the data sheet of the different materials.

Calculation of housing length L

Control the length **H**. The housing length **L** must be calculated in accordance to the table below.

B	≤ 6,5	6,6→10	10,1→18	18,1→24,9	≥ 25
L	**H**+1	**H**+1,2	**H**+1,4	**H**+2	**H**+2,5

For special requirements (fluid, temperature, pressure, speed...) or applications approaching maximum values, please contact us. Other materials available: **FPM**, **HNBR**, **TNBR**, **EPDM**...

MS = d + 2e

Machining of housings: see pages 48-49

10CH is a V-pack rod seal for heavy duty applications offering excellent performance and long life even under difficult conditions such as pressure surges, vibration and some misalignment. The seal consists of a male and female adaptor and three V-rings.

The male adapter or **spreader ring** is usually manufactured in POM but some of the larger sizes are rubberised fabric. It has radial grooves to ensure equal pressure to both sealing edges of the V-ring.

All sizes have **V-rings** manufactured from rubberised fabric increasing strength and durability and allowing an oil film **to lubricate the other parts of the seal**. The smaller sizes are supplied with a rubber V-ring between the rubberised fabric V-rings.

The female adaptor or **base ring** uses a hard rubberised fabric to support the V-rings and protect them from extrusion damage. At high pressure the lips of the base ring act as a secondary seal.

Operating conditions — **see page 8**

Pressure	≤ 40 MPa
Temperature	-30°C to 120°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials — **see pages 10-19**

Spreader ring ①	Acetal resin
V-ring ②	generally: 1 x NBR + 2 x NBR-fabric
Base ring ③	NBR-fabric

Assembly — **see pages 54-59**

In open housings with adjustable length

Advantages

- High operating temperature capability
- Large range of sizes
- For difficult operating conditions: high pressure peaks, bad sliding surfaces, ...
- Adjustable
- Not sensitive to contamination of the medium

Please contact us for applications approaching maximum values.

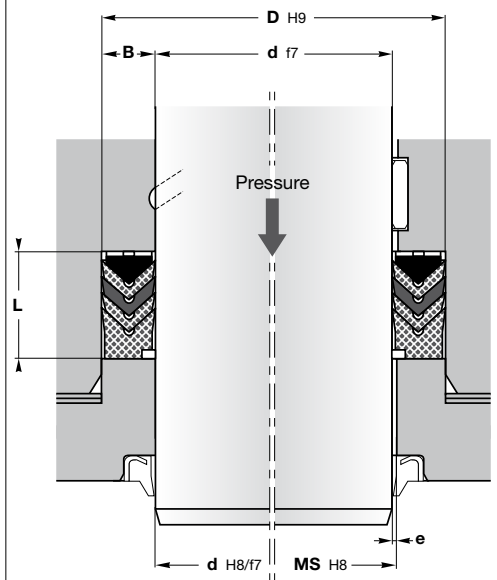
10CH.../NEI(1+3+1)



e ≤ 0,15 mm

MS = d + 2e

Machining of housings: see pages 48-49

10CH.../NEI is a V-pack rod seal for heavy duty applications offering excellent performance and long life even under difficult conditions such as pressure surges, vibration and some misalignment. The seal consists of a male and female adaptor and three V-rings.

The male adapter or **spreader ring** is usually manufactured in POM but some of the larger sizes are rubberised fabric. It has radial grooves to ensure equal pressure to both sealing edges of the V-ring.

All sizes have **V-rings** manufactured from rubberised fabric increasing strength and durability and allowing an oil film **to lubricate the other parts of the seal**. The smaller sizes are supplied with a rubber V-ring between the rubberised fabric V-rings.

The female adaptor or **base ring** uses a hard rubberised fabric and a **POM back-up ring** to support the base ring and protect him from extrusion damage. At high pressure the lips of the adaptor act as a secondary seal.

Operating conditions	**see page 8**
Pressure	≤ 50 MPa
Temperature	-30°C to 120°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Spreader ring ①	Acetal resin
V-ring ②	generally: 1 x NBR + 2 x NBR-fabric
Base ring ③	NBR-fabric
Anti-extrusion ring ④	Acetal resin

Assembly	**see pages 54-59**
In open housings with adjustable length	

Advantages

- High operating temperature capability
- For difficult operating conditions: high pressure peaks, bad sliding surfaces, ...
- Not sensitive to contamination of the medium
- The integrated anti-extrusion ring prevents the seal material from extrusion at higher pressure

Please contact us for applications approaching maximum values.

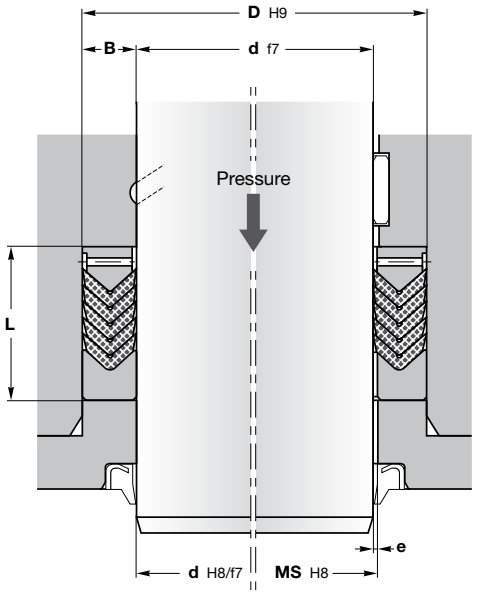
If your housing is not adjustable, contact us.

10CH...-V



e ≤ 0,15 mm

MS = d + 2e

Machining of housings: see pages 48-49

The intermediate **10CH...-V** shaped rings (V-rings) are the real sealing elements of Veepac seals. Their particular shape confers the capacity of increasing sealing effectiveness under high pressure. In standard version they are made in cotton fabric reinforced NBR.

It is possible to machine the **spreader** and the **base rings** following the drawings here below.

Operating conditions	**see page 8**
Pressure	≤ 40 MPa
Temperature	-30°C to 120°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
V-ring	NBR with cotton fabric

Assembly	**see pages 54-59**
In open grooves	

Advantages

- High operating temperature capability
- For difficult operating conditions: high pressure peaks, bad sliding surfaces, ...
- Not sensitive to contamination of the medium

Please contact us for applications approaching maximum values.

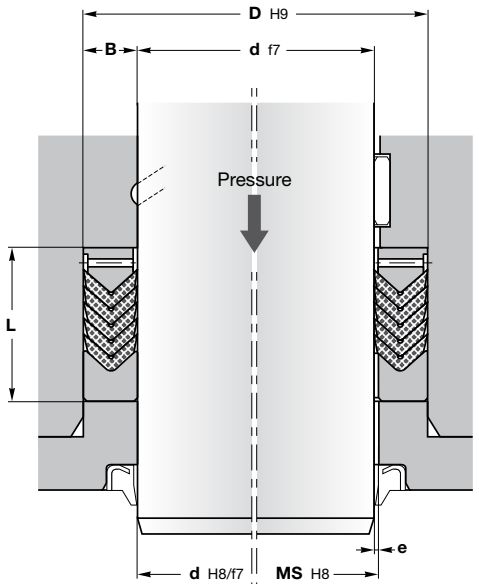
10CH...-V



e ≤ 0,15 mm

MS = d + 2e

Machining of housings: see pages 48-49

The intermediate **10CH...-V** shaped rings (V-rings) are the real sealing elements of Veepac seals. Their particular shape confers the capacity of increasing sealing effectiveness under high pressure. In standard version they are made in cotton fabric reinforced NBR.

It is possible to machine the **spreader** and the **base rings** following the drawings here below.

Operating conditions	**see page 8**
Pressure	≤ 40 MPa
Temperature	-30°C to 120°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**
Materials	**see pages 10-19**
V-ring	NBR with cotton fabric
Assembly	**see pages 54-59**
In open grooves	

Advantages

- High operating temperature capability
- For difficult operating conditions: high pressure peaks, bad sliding surfaces, ...
- Not sensitive to contamination of the medium

Please contact us for applications approaching maximum values.

More information

On **www.sealtech-business.be**, click first on the reference and then on the material code to obtain the data sheet of the material.

metal guiding | with guide rings

e ≤ 0,15 mm

MS = d + 2e

Machining of housings: see pages 48-49

Calculation of housing length L

Control the length **H**. The housing length **L** must be calculated in accordance to the table below.

B	≤ 5	5,1→6,5	6,6→10
L	**H**+1	**H**+1,2	**H**+1,5

V-pack set **10CH1** is a sealing system with 3 fabric and 2 elastomer sealing rings. This combination guarantees minimal leakage. The V-packs are, due to their geometrical composition, always used in conjunction with a spreader ring and a base ring. V-pack sets are used in extreme application areas.

10CH1 V-packs are made up of "V" shaped rings combination that are preformed and moulded with NBR applied on cotton fabric.

They consist of 7 elements in total which are 1 spreader ring, 3 NBR-fabric V-ring, 2 NBR V-ring and 1 NBR-fabric base ring.

These packs are recommended to be used in rod applications and be assembled in open seal housings.

It is not recommended to overpress the rings during assembly because it will lead to high friction and very short lifespan.

Operating conditions — see page 8

Pressure	≤40 MPa
Temperature	
10CH1	-30°C to 105°C
11CH1...FPM-C	-20°C to 150°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials NBR seals — see pages 10-19

Spreader ring ①	Acetal resin or NBR-fabric
V-ring ②	generally: 2 x NBR + 3 x NBR-fabric
Base ring ③	NBR-fabric

Materials FPM seals — see pages 10-19

Spreader ring ①	FPM-fabric
V-ring ②	generally: 5 x FPM-fabric
Base ring ③	FPM-fabric

Assembly — see pages 54-59

In open housings with adjustable length

Advantages

- High operating temperature capability
- Large range of sizes
- For difficult operating conditions: high pressure peaks, bad sliding surfaces, ...
- Adjustable
- Not sensitive to contamination of the medium

Please contact us for applications approaching maximum values.

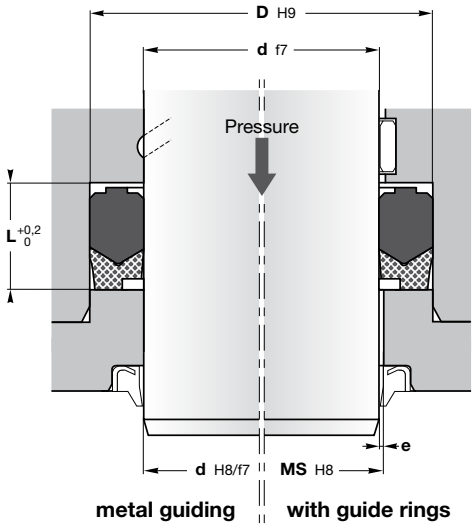
10SM



MS = d + 2e

Machining of housings: see pages 48-49

d (mm)	e (mm)
≤ 110	≤ 0,2
> 110	≤ 0,35

Rod seal type **10SM** series consists of a NBR sealing element and a supporting element of TPE or cotton fabric reinforced nitrile elastomere, with integrated anti-extrusion ring in POM.

The NBR sealing element made of highly wear-resistant nitrile rubber has a high tensile strength and a low compression set.

This **10SM** sealing element is designed for **heavy duty applications**.

This design in 3 pieces is only allowed in open housings.

Operating conditions	**see page 8**
Pressure	≤ 70 MPa
Temperature	-30°C to 110°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Sealing element ①	NBR
Base ring ②	NBR-fabric or TPE
Anti-extrusion ring ③	Acetal resin

Assembly	**see pages 54-59**
In open grooves	

Advantages

- Extrusion resistance at high pressure
- No housing adjustment necessary
- Good price-performance ratio
- High sealing efficiency
- Good sealing during vibrations and shock loadings

Please contact us for applications approaching maximum values.

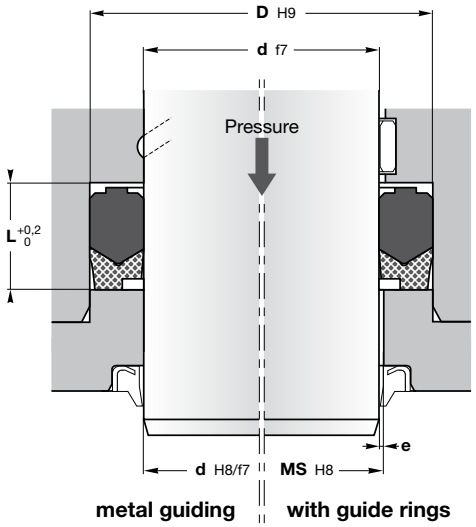
10SM



MS = d + 2e

Machining of housings: see pages 48-49

d (mm)	**e** (mm)
≤ 110	≤ 0,2
> 110	≤ 0,35

Rod seal type **10SM** series consists of a NBR sealing element and a supporting element of TPE or cotton fabric reinforced nitrile elastomere, with integrated anti-extrusion ring in POM.

The NBR sealing element made of highly wear-resistant nitrile rubber has a high tensile strength and a low compression set.

This **10SM** sealing element is designed for **heavy duty applications**.

This design in 3 pieces is only allowed in open housings.

Operating conditions see page 8

Pressure	≤ 70 MPa
Temperature	-30°C to 110°C
Speed	≤ 0,5 m/s
Fluids	see pages 22-45

Materials see pages 10-19

Sealing element ①	NBR
Base ring ②	NBR-fabric or TPE
Anti-extrusion ring ③	Acetal resin

Assembly see pages 54-59

In open grooves

Advantages

- Extrusion resistance at high pressure
- No housing adjustment necessary
- Good price-performance ratio
- High sealing efficiency
- Good sealing during vibrations and shock loadings

Please contact us for applications approaching maximum values.

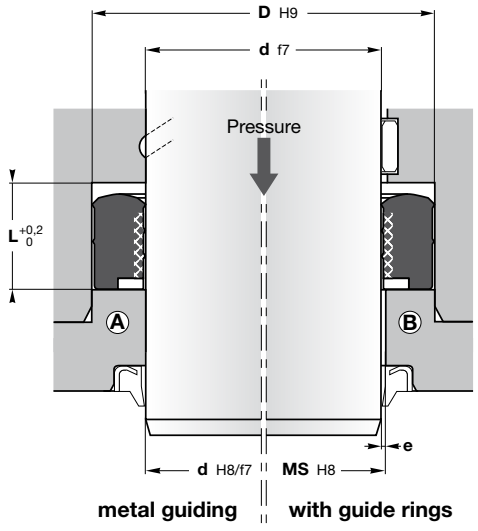
10SM.../M



Machining of housings: see pages 48-49

d (mm)	**e** (mm)
≤ 40	≤ 0,3
> 40	≤ 0,4

10SM.../M compact rod seal has a great contact sealing surface in reinforced cotton fabric. To provide initial sealing under low pressure the inner surface has two sealing edges. Even with a worn piston rod the greater sealing surface continues to give good sealing.

The POM back-up ring even accepts relativly large clearance gaps.

Operating conditions **see page 8**

Pressure	≤ 25 MPa
Temperature	-30°C to 110°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials **see pages 10-19**

Sealing element ①	NBR fabric-reinforced inside
Anti-extrusion ring ②	Acetal resin

Assembly **see pages 54-59**

In open grooves

Advantages

Extrusion resistance at high pressure
No housing adjustment necessary

Please contact us for applications approaching maximum values.

30	≤ 0,15	≤ 0,2
40	≤ 0,1	≤ 0,15

10EU U-ring is a single-acting rod seal with an asymmetrical design. Due to the geometry and material, this seal is exceptionally well-suited for shock pressure peaks and **low friction** in the low pressure range.

Operating conditions — **see page 8**

Pressure	≤ 40 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials — **see pages 10-19**

Seal	Polyurethane

Assembly — **see pages 54-59**

In closed grooves Ⓐ
In open grooves Ⓑ

Advantages

- Low friction in the low pressure range
- Excellent abrasion resistance
- Good price-performance ratio
- Simple assembly
- Good resistance to clearance extrusion
- Can be installed as single seal or as secondary seal
- Unaffected by high loads and deflections of the rod

Please contact us for applications approaching maximum values.

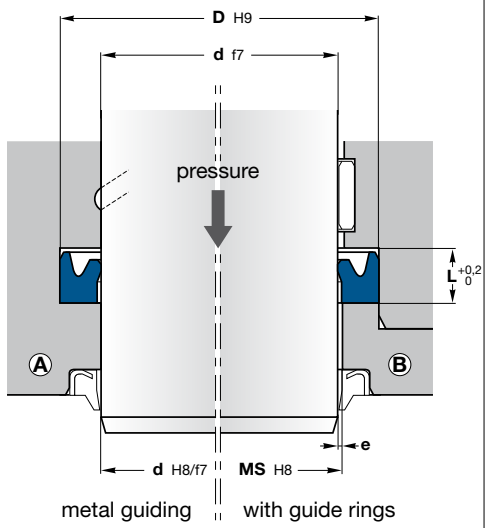
10EU seals with diameters between 20 and 1500 mm can be manufactured within short delivery time.
For prices and availability: **www.sealtech-business.be**

10EU



MS = d + 2e

Machining of housings: see pages 48-49

Pressure (MPa)	**e** (mm)	
	d ≤ 60 mm	**d** > 60 mm
5	≤ 0,4	≤ 0,5
10	≤ 0,3	≤ 0,4
20	≤ 0,2	≤ 0,3
30	≤ 0,15	≤ 0,2
40	≤ 0,1	≤ 0,15

10EU U-ring is a single-acting rod seal with an asymmetrical design. Due to the geometry and material, this seal is exceptionally well-suited for shock pressure peaks and **low friction** in the low pressure range.

Operating conditions — **see page 8**

Pressure	≤ 40 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials — **see pages 10-19**

Seal	Polyurethane

Assembly — **see pages 54-59**

In closed grooves Ⓐ
In open grooves Ⓑ

Advantages

- Low friction in the low pressure range
- Excellent abrasion resistance
- Good price-performance ratio
- Simple assembly
- Good resistance to clearance extrusion
- Can be installed as single seal or as secondary seal
- Unaffected by high loads and deflections of the rod

Please contact us for applications approaching maximum values.

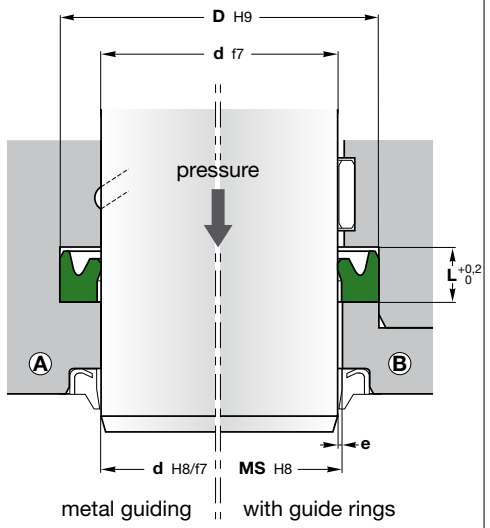
10EU.../ET



MS = d + 2e

Machining of housings: see pages 48-49

Pressure (MPa)	**e** (mm)	
	d ≤ 60 mm	**d** > 60 mm
5	≤ 0,4	≤ 0,5
10	≤ 0,3	≤ 0,4
20	≤ 0,2	≤ 0,3
30	≤ 0,15	≤ 0,2
40	≤ 0,1	≤ 0,15

10EU.../ET U-ring is a single-acting rod seal with an asymmetrical design. Due to the geometry and material, this seal is exceptionally well-suited for shock pressure peaks and **low friction** in the low pressure range.

Suitable for high and low ranges of temperatures.

This seal can be used for cylinders exposed to high temperature **painting processes**.

Operating conditions	**see page 8**
Pressure	≤ 40 MPa
Temperature	-40°C to 130°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Seal	PU33

Assembly	**see pages 54-59**
In closed grooves Ⓐ	
In open grooves Ⓑ	

Advantages

- Very large range of temperatures
- Low friction in the low pressure range
- Excellent abrasion resistance
- Good price-performance ratio
- Simple assembly
- Good resistance to clearance extrusion
- Can be installed as single seal or as secondary seal
- Unaffected by high loads and deflections of the rod

Please contact us for applications approaching maximum values.

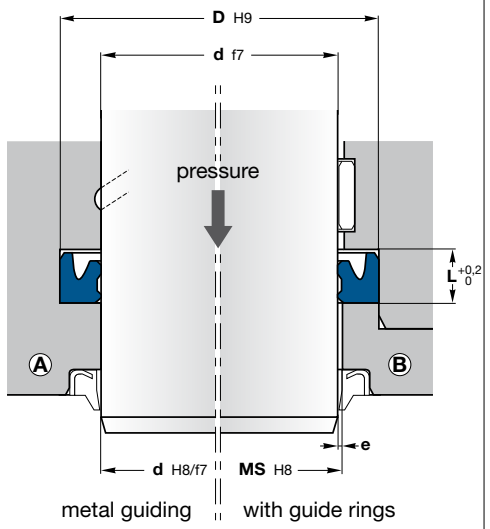
10RS.../L



MS = d + 2e

Machining of housings: see pages 48-49

Pressure (MPa)	**e** (mm)	
	d ≤ 60 mm	**d** > 60 mm
5	≤ 0,4	≤ 0,5
10	≤ 0,3	≤ 0,4
20	≤ 0,2	≤ 0,3
30	≤ 0,15	≤ 0,2
40	≤ 0,1	≤ 0,15

10RS.../L rod U-rings, that have shorter inner sealing lips, are produced for rod applications.

They ensure lower oil film thickness due to their second dynamic sealing lip. At the same time, they prevent the entry of foreign particles into the cylinder.

Operating conditions — **see page 8**

Pressure	≤ 40 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials — **see pages 10-19**

Seal	Polyurethane

Assembly — **see pages 54-59**

In closed grooves Ⓐ
In open grooves Ⓑ

Advantages

Low friction
Excellent abrasion resistance
Good price-performance ratio
Small cross-section
Simple assembly
Good resistance to clearance extrusion
Unaffected by high loads and deflections of the rod

Please contact us for applications approaching maximum values.

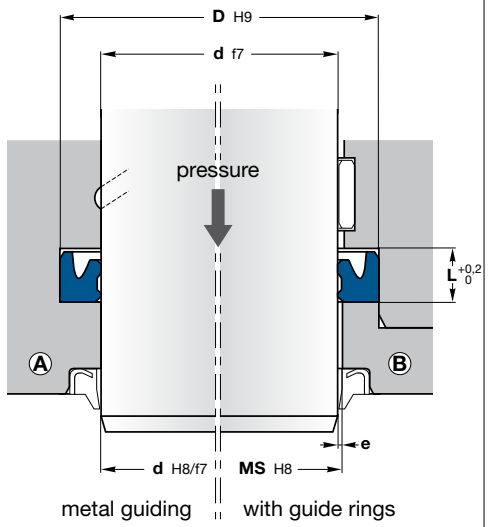
10RS.../L



MS = d + 2e

Machining of housings: see pages 48-49

Pressure (MPa)	**e** (mm)	
	d ≤ 60 mm	**d** > 60 mm
5	≤ 0,4	≤ 0,5
10	≤ 0,3	≤ 0,4
20	≤ 0,2	≤ 0,3
30	≤ 0,15	≤ 0,2
40	≤ 0,1	≤ 0,15

10RS.../L rod U-rings, that have shorter inner sealing lips, are produced for rod applications.

They ensure lower oil film thickness due to their second dynamic sealing lip. At the same time, they prevent the entry of foreign particles into the cylinder.

Operating conditions — **see page 8**

Pressure	≤ 40 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials — **see pages 10-19**

Seal	Polyurethane

Assembly — **see pages 54-59**

In closed grooves Ⓐ
In open grooves Ⓑ

Advantages

- Low friction
- Excellent abrasion resistance
- Good price-performance ratio
- Small cross-section
- Simple assembly
- Good resistance to clearance extrusion
- Unaffected by high loads and deflections of the rod

Please contact us for applications approaching maximum values.

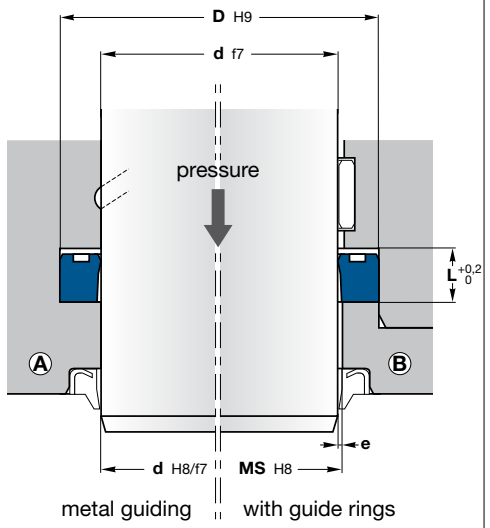
10TS



MS = d + 2e

Machining of housings: see pages 48-49

Pressure (MPa)	**e** (mm)	
	d ≤ 60 mm	**d** > 60 mm
5	≤ 0,4	≤ 0,5
10	≤ 0,3	≤ 0,4
20	≤ 0,2	≤ 0,3
30	≤ 0,15	≤ 0,2
40	≤ 0,1	≤ 0,15

10TS compact rod seals can be used for rod applications thanks to their sealing lip design.

The compact form provides a high sealing effect even at low pressures.

10TS compact rod seals, which have an impressive price-performance ratio, are produced using the standard PU materials.

Operating conditions see page 8

Pressure	≤ 40 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	see pages 22-45

Materials see pages 10-19

Seal	Polyurethane

Assembly see pages 54-59

In closed grooves Ⓐ

In open grooves Ⓑ

Advantages

- Excellent abrasion resistance
- Efficient sealing at low and high pressures
- Suitable for telescopic cylinders
- Suitable for small grooves
- Unaffected by sudden loads
- Do not use with double acting wipers without a drain hole between wiper and seal

Please contact us for applications approaching maximum values.

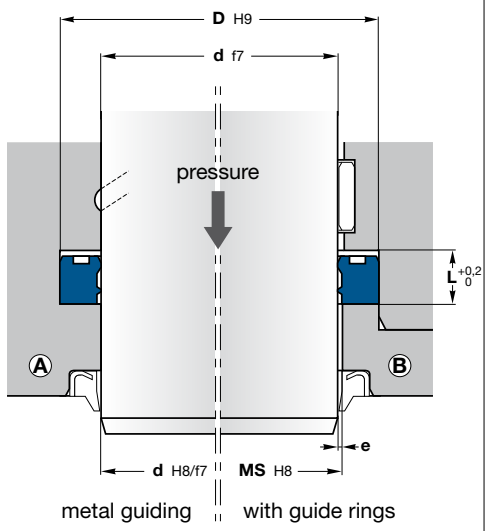
10TS seals with diameters between 20 and 1500 mm can be manufactured within short delivery time.
For prices and availability: **www.sealtech-business.be**

10TS.../L



MS = d + 2e

Machining of housings: see pages 48-49

Pressure (MPa)	**e** (mm)	
	d ≤ 60 mm	**d** > 60 mm
5	≤ 0,4	≤ 0,5
10	≤ 0,3	≤ 0,4
20	≤ 0,2	≤ 0,3
30	≤ 0,15	≤ 0,2
40	≤ 0,1	≤ 0,15

10TS.../L compact rod seals can be used for rod applications thanks to their sealing lip design.

The compact form provides a high sealing effect even with low pressures.

With a wide range of dimensions available, **10TS.../L** compact rod seals, which have an impressive price-performance ratio, are produced using the standard PU materials.

Operating conditions	**see page 8**
Pressure	≤ 40 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Seal	Polyurethane

Assembly	**see pages 54-59**
In closed grooves Ⓐ	
In open grooves Ⓑ	

Advantages

- Excellent abrasion resistance
- Efficient sealing at low and high pressures
- Suitable for telescopic cylinders
- Suitable for small grooves
- Unaffected by sudden loads
- Do not use with double acting wipers without a drain hole between wiper and seal

Please contact us for applications approaching maximum values.

10TS.../L seals with diameters between 20 and 1500 mm can be manufactured within short delivery time.
For prices and availability: **www.sealtech-business.be**

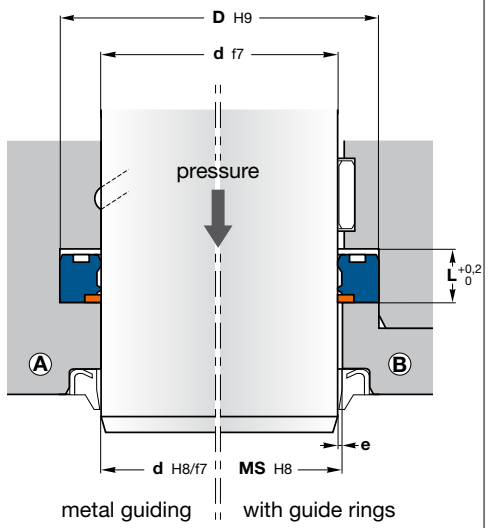
10TS.../LA



MS = d + 2e

Machining of housings: see pages 48-49

Pressure (MPa)	e (mm)	
	d ≤ 60 mm	**d** > 60 mm
5	≤ 0,6	≤ 0,8
10	≤ 0,6	≤ 0,8
20	≤ 0,4	≤ 0,6
30	≤ 0,3	≤ 0,4
40	≤ 0,2	≤ 0,3
50	≤ 0,1	≤ 0,15

10TS.../LA compact rod seals can be used for rod applications thanks to their sealing lip design.

The compact form and a second lip provide a high sealing effect even at low pressures.

The integrated back-up ring of **10TS.../LA** provides an attractive solution to larger extrusion gaps and high pressure peaks.

Operating conditions	**see page 8**
Pressure	≤ 50 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Seal ①	Polyurethane
Anti-extrusion ring ②	Acetal resin (POM)

Assembly	**see pages 54-59**
In closed grooves Ⓐ	
In open grooves Ⓑ	

Advantages

- Excellent abrasion resistance
- Efficient sealing at low and high pressures
- Suitable for telescopic cylinders
- Suitable for small grooves
- Unaffected by sudden loads
- Do not use with double acting wipers
- The integrated anti-extrusion ring prevents the seal material from extrusion at higher pressure

Please contact us for applications approaching maximum values.

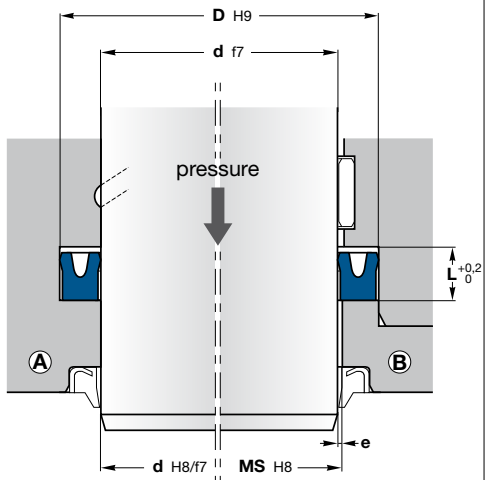
☒ Profile a

10MU

☒ Profile b



MS = d + 2e

Machining of housings: see pages 48-49

Pressure (MPa)	**e** (mm)	
	d ≤ 60 mm	**d** > 60 mm
5	≤ 0,4	≤ 0,5
10	≤ 0,3	≤ 0,4
20	≤ 0,2	≤ 0,3
30	≤ 0,15	≤ 0,2
40	≤ 0,1	≤ 0,15

10MU U-ring has a symmetrical configuration of the sealing lips and can therefore also be used as piston seal. The seal design and the polyurethane properties give efficient fluid sealing, reduced friction values and low wear rate. The sealing effect is obtained thanks to the lip pre-compression due to installation into the groove and to the pressure effect on the lips.

Dimensions in **Profile b** can be combined with the corresponding O-ring, resulting in a better compression-set behavior and better performance at low pressure.

Operating conditions **see page 8**

Pressure	≤ 40 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials **see pages 10-19**

Polyurethane

Assembly **see pages 54-59**

In closed grooves Ⓐ

In open grooves Ⓑ

Advantages

Good price-performance ratio

Symmetric seal for rods and pistons

Excellent abrasion resistance

For new constructions, use preferably the profiles 10EU, 10RS/L, 10TS, 10TS/L... for rod seals

Some 10MU seals have the profile b. In this case, you can put an O-ring (dimensions: see table on next page) into the seal, to obtain the 10EUS profile

Please contact us for applications approaching maximum values.

10MU
15MUE ☒ Profile a

10MU ☒ Profile b

metal guiding with guide rings

MS = d + 2e

Machining of housings: see pages 48-49

Pressure (MPa)	**e** (mm)	
	d ≤ 60 mm	**d** > 60 mm
5	≤ 0,4	≤ 0,5
10	≤ 0,3	≤ 0,4
20	≤ 0,2	≤ 0,3
30	≤ 0,15	≤ 0,2
40	≤ 0,1	≤ 0,15

10MU U-ring has a symmetrical configuration of the sealing lips and can therefore also be used as piston seal. The seal design and the polyurethane properties give efficient fluid sealing, reduced friction values and low wear rate. The sealing effect is obtained thanks to the lip pre-compression due to installation into the groove and to the pressure effect on the lips.

Dimensions in **Profile b** can be combined with the corresponding O-ring, resulting in a better compression-set behavior and better performance at low pressure.

Operating conditions **see page 8**

Pressure	≤ 40 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials **see pages 10-19**

Polyurethane

Assembly **see pages 54-59**

In closed grooves Ⓐ

In open grooves Ⓑ

Advantages

Good price-performance ratio

Symmetric seal for rods and pistons

Excellent abrasion resistance

For new constructions, use preferably the profiles 10EU, 10RS/L, 10TS, 10TS/L... for rod seals

Some 10MU seals have the profile b. In this case, you can put an O-ring (dimensions: see table on next page) into the seal, to obtain the 10EUS profile

Please contact us for applications approaching maximum values.

☒ Profile a

10MU

☒ Profile b

metal guiding with guide rings

MS = d + 2e

Machining of housings: see pages 48-49

Pressure (MPa)	**e** (mm)	
	d ≤ 60 mm	**d** > 60 mm
5	≤ 0,4	≤ 0,5
10	≤ 0,3	≤ 0,4
20	≤ 0,2	≤ 0,3
30	≤ 0,15	≤ 0,2
40	≤ 0,1	≤ 0,15

10MU U-ring has a symmetrical configuration of the sealing lips and can therefore also be used as piston seal. The seal design and the polyurethane properties give efficient fluid sealing, reduced friction values and low wear rate. The sealing effect is obtained thanks to the lip pre-compression due to installation into the groove and to the pressure effect on the lips.

Dimensions in **Profile b** can be combined with the corresponding O-ring, resulting in a better compression-set behavior and better performance at low pressure.

Operating conditions **see page 8**

Pressure	≤ 40 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials **see pages 10-19**

Polyurethane

Assembly **see pages 54-59**

In closed grooves Ⓐ
In open grooves Ⓑ

Advantages

Good price-performance ratio
Symmetric seal for rods and pistons
Excellent abrasion resistance
For new constructions, use preferably the profiles 10EU, 10RS/L, 10TS, 10TS/L... for rod seals
Some 10MU seals have the profile b. In this case, you can put an O-ring (dimensions: see table on next page) into the seal, to obtain the 10EUS profile

Please contact us for applications approaching maximum values.

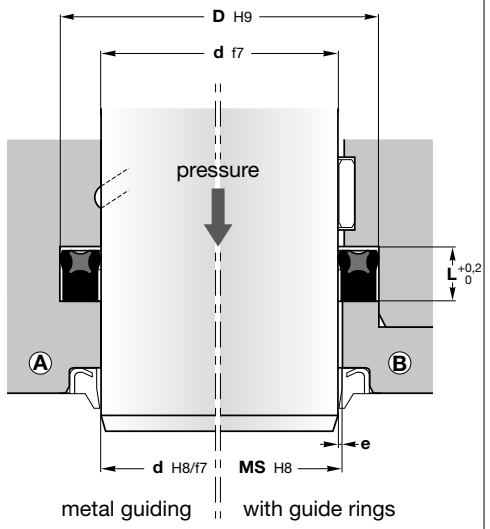
10EUS/I



MS = d + 2e

Machining of housings: see pages 48-49

Pressure (MPa)	**e** (mm)	
	d ≤ 60 mm	**d** > 60 mm
5	≤ 0,4	≤ 0,5
10	≤ 0,3	≤ 0,4
20	≤ 0,2	≤ 0,3
30	≤ 0,15	≤ 0,2
40	≤ 0,1	≤ 0,15

10EUS/I is a standard loaded lip seal profile using a polyurethane energised by a high resilient X-ring.

At zero or low pressure the energising ring helps to increase the sealing force preventing any bypass. As pressure rises the sealing force increases and the **10QR** provides complete lip actuation under most conditions.

The precision trimmed sealing lips ensure optimum sealing action.

Energising ring ②	NBR

Assembly	**see pages 54-59**
In closed grooves Ⓐ	
In open grooves Ⓑ	

Advantages

- Efficient sealing at high and low pressure
- Excellent abrasion resistance
- Good price-performance ratio
- Simple assembly
- Good resistance to clearance extrusion
- Very low compression set due to the **10QR**

Please contact us for applications approaching maximum values.

More information

On **www.sealtech-business.be**, click first on the reference and then on the material code to obtain the data sheet of the different materials.

10EUS/I is a standard loaded lip seal profile using a polyurethane energised by a high resilient X-ring.

At zero or low pressure the energising ring helps to increase the sealing force preventing any bypass. As pressure rises the sealing force increases and the **10QR** provides complete lip actuation under most conditions.

The precision trimmed sealing lips ensure optimum sealing action.

50	≤ 0,1	≤ 0,15

10EUS.../LA heavy duty rod seals offer perfect sealing in heavy duty applications thanks to the their double sealing lips and POM back-up ring.

The NBR O-ring guarantees the maximum sealing performance even at very low pressure.

Operating conditions — **see page 8**

Pressure	≤ 50 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials — **see pages 10-19**

Energising ring ①	NBR
Seal ②	PU10
Anti-extrusion ring ③	POM

Assembly — **see pages 54-59**

In closed grooves Ⓐ

In open grooves Ⓑ

Advantages

- Efficient sealing at high and low pressure
- Excellent abrasion resistance
- Unaffected by sudden loads and high pressure
- Simple assembly
- Good resistance to clearance extrusion
- Very low compression set due to the O-ring
- The integrated anti-extrusion ring prevents the sealing material from extrusion at higher pressure

Please contact us for applications approaching maximum values.

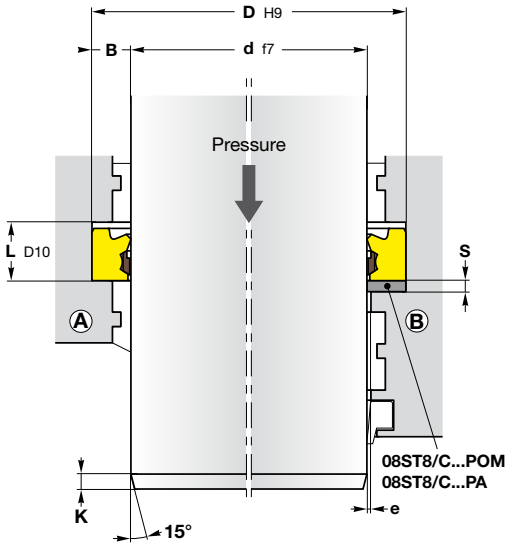
12TDI

12TDI...FPM
with seal ① in FPM



Machining of housings: see pages 48-49

	Construction Ⓐ	Construction Ⓑ	
Diameter (mm)	P ≤ 36 MPa	P ≤ 63 MPa	
	e (mm)	**S** (mm)	**e** (mm)
0 - 55	0,3	1	0,4
56 - 115	0,35	2	0,6
120 - 300	0,4	2	0,6
> 300	0,5	3	1

12TDI seal consists of 2 parts, an external elastic ring of PUR with a sealing lip and an internal slide ring of abrasion resistant PTFE-Bronze compound with a sealing edge.

Prior to fitting, the sealing lip protrudes beyond the nominal diameter of the seal and when fitted is pressed against the piston rod. Effective sealing is thereby provided at zero pressure.

Operating conditions see page 8

Pressure	
construction Ⓐ	≤ 36 MPa
construction Ⓑ	≤ 63 MPa
Temperature	-35°C to 100°C
Speed	≤ 1 m/s
Fluids	see pages 22-45

Materials see pages 10-19

Seal ①	PU FPM : other operating conditions
Ring ②	PTFE-bronze

Assembly see pages 54-59

In closed housings

Advantages

- Compact seal : no loss of space
- Low friction
- Simple assembly
- Efficient sealing at high and low pressure
- Excellent abrasion resistance

Please contact us for applications approaching maximum values.

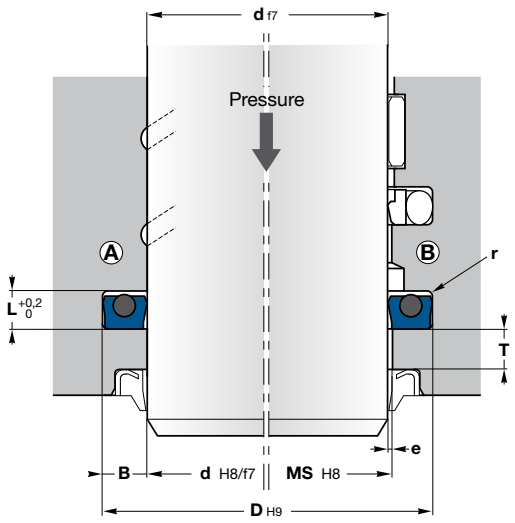
10EUS/C



metal guiding || with guide rings

MS = d + 2e

T ≥ B

Machining of housings: see pages 48-49

Pressure (MPa)	**e** (mm)
≤ 16	≤ 0,6
≤ 25	≤ 0,5

ATTENTION: The 10EUS/C seal may be assembled in the groove of the standard 10I/GR seal.

10EUS/C seal type has been developed to replace or work jointly with stepseals in PTFE, and has the same groove dimensions.

The PU seal has a round groove where an O-ring can be inserted and housed. The O-ring acts as an energiser for the static and dynamic sealing lips even without pressure.

This profile also has excellent results at very low speed and pressure, because of the low friction and the energiser.

Operating conditions — **see page 8**

Pressure Ⓐ	≤ 25 MPa
In tandem with **10I/GR...B** or **17RS** Ⓑ	≤ 50 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials — **see pages 10-19**

Energising ring ①	NBR 70 Sh A
Seal ②	PU

Assembly — **see pages 54-59**

In closed grooves Ⓐ

Secondary seal in tandem with **10I/GR...B** or **17RS** Ⓑ

Advantages

- Efficient sealing at high and low pressure
- Excellent abrasion resistance
- Good price-performance ratio
- Simple assembly
- Good resistance to clearance extrusion
- Very low compression set due to the O-ring

Please contact us for applications approaching maximum values.

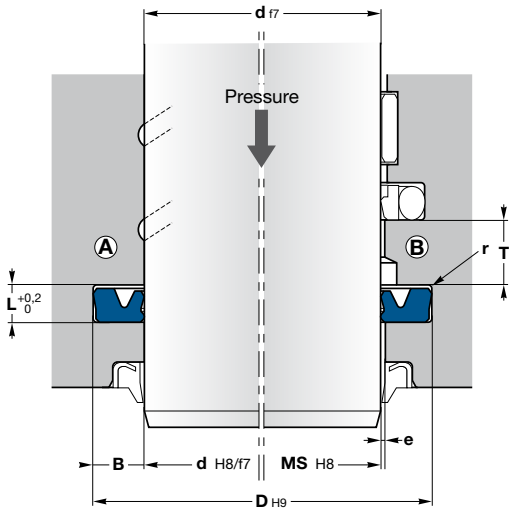
PU rod seal
with asymmetric lips and double lip

10EUL



MS = d + 2e

T ≥ B

Machining of housings: see pages 48-49

Pressure (MPa)	**e** (mm)
5	≤ 0,4
10	≤ 0,3
15	≤ 0,25
20	≤ 0,2
25	≤ 0,15

10EUL is a seal with asymmetric lips designed for light and **medium duty applications** where spaces and friction need to be low.

It can be used either as a single acting seal or, in presence of fast and high pressure variations, in tandem configuration as a "secondary" seal behind a PTFE one.

It is used in the same housing normally destined to PTFE seal of which has similar dimensional characteristics but, compared to it, **better sealing capabilities**, greater easy installation and lower cost.

The seal is made of a polyurethane compound that ensures excellent properties on wear-resistance, **extended service life** and resistance against extrusion.

Operating conditions **see page 8**

Pressure	≤ 25 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials **see pages 10-19**

Seal	Polyurethane

Assembly **see pages 54-59**

In closed grooves Ⓐ
In open grooves Ⓑ

Advantages

- Good sealing performance
- Low cost solution
- Easy installation
- Designed to snap fit into its housing
- Simple groove design and space-saving construction
- Excellent wear-resistance
- Extended service life
- Good temperature resistance

Please contact us for applications approaching maximum values.

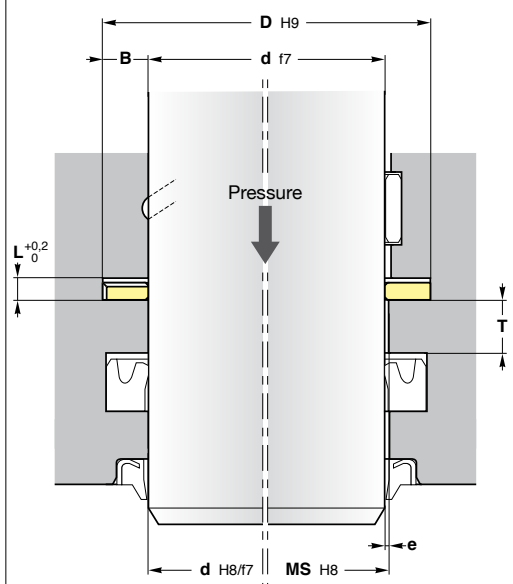
10BUF

10BUF.../S



e (mm) ≤ 0,35

MS = d + 2e

T ≥ B

Machining of housings: see pages 48-49

10BUF buffer seals are used as the first sealing element in hydraulic cylinders for rods. They consist of high performanced PU ring.

Some sizes (**10BUF.../S**) include a radial and axial slot, which faces the pressure, to relieve back pressure.

10BUF buffer seals must be combined with other sealing elements.

This simple design is commonly found on older construction equipment.

Operating conditions see page 8

Pressure	≤ 40 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
Fluids	see pages 22-45

Materials see pages 10-19

Seal: PU

Assembly see pages 54-59

In closed grooves

Pay attention to assemble the **10BUF.../S** with the slot facing the pressure.

Advantages

Small section

To use only as “buffer” seal (primary rod seal)

Low friction

Excellent abrasion and wear resistance

Please contact us for applications approaching maximum values.

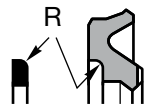
Assembly see pages 54-59

In closed grooves

Pay attention to assemble the anti-extrusion ring in the right way



Advantages

- Small section
- To use only as “buffer” seal (primary rod seal)
- Low friction
- Excellent abrasion and wear resistance
- The integrated anti-extrusion ring prevents the seal material from extrusion at higher pressure

Please contact us for applications approaching maximum values.

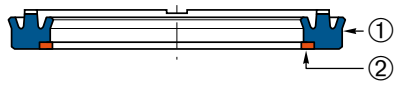
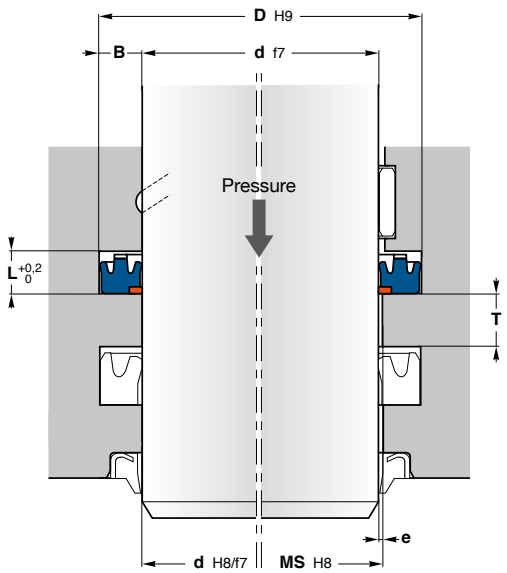
The **10IBF** seal may also be assembled in the groove of the standard **10I/GR** seal (**D** -0,4 mm).

10IBF seals with diameters between 20 and 1500 mm can be manufactured within short delivery time.
For prices and availability: **www.sealtech-business.be**



10IBU



e (mm) ≤ 0,35

MS = d + 2e

T ≥ B

Machining of housings: see pages 48-49

10IBU U-ring is produced in a compact design which guarantees good functioning at low pressures and guarantees a particularly long service life. **10IBU** is a single-acting rod seal. The semi-active back-up ring on the inner diameter prevents gap extrusion on the side facing away from the pressure.

Operating conditions	**see page 8**
Pressure	≤ 50 MPa
Temperature	-40°C to 100°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Seal ①	PU10
Anti-extrusion ring ②	POM

Assembly	**see pages 54-59**
In closed grooves	

Advantages

- Small section
- To use as “buffer seal” (primary rod seal)
- Easy installation
- Simple groove design and space-saving construction
- Excellent wear-resistance
- High resistance against extrusion
- Good temperature resistance

Please contact us for applications approaching maximum values.

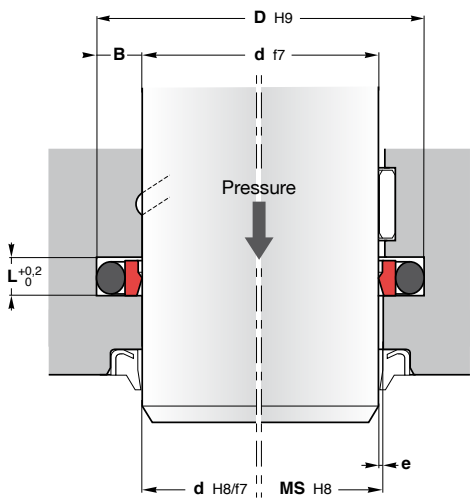
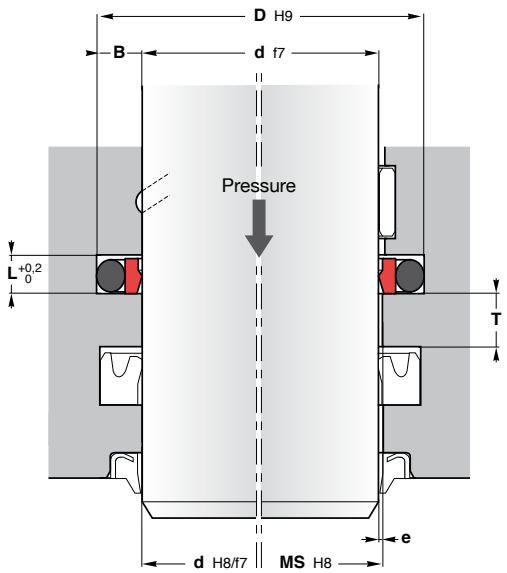
10I/GH





metal guiding | with guide rings

MS = d + 2e

T ≥ B

Machining of housings: see pages 48-49

10I/GH consists of a TPE face ring and a rubber O-ring energiser. The seal can be used as main sealing element in application up to 25 MPa / 3500 p.s.i. In applications where pressure peaks occur or in high speed applications it is recommended to use the seal **in tandem** with the 10I/GR seal.

The wear resistant thermoplastic polyester elastomer (TPE) ring is energised by an O-ring. **10I/GH** is also available in a modified design developed for rotary and swivelling applications, such as swivel joints on mobile hydraulic equipment.

Operating conditions	**see page 8**
Pressure	≤ 50 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s (at 100°C) ≤ 1 m/s (at 80°C)
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Energising element ①	NBR 70 Sh A
Dynamic sealing element ②	TPE

Assembly	**see pages 54-59**
In closed grooves	

Advantages

- Good sealing performance
- Good price-performance ratio compared to the corresponding PTFE seal
- Easy installation
- Low friction and no tendency of stick-slip
- Returns to the size immediately after assembly
- Simple groove design and space-saving construction
- Excellent wear-resistance
- High resistance against extrusion
- Extended service life

Please contact us for applications approaching maximum values.

10I/GR...B rod seals are composed of a filled PTFE ring manufactured by machining technique combined with an O-ring that is used as an energising ring.

They are suitable for high sliding speeds due to the low friction force which is among one of the essential properties of PTFE material. Moreover, they can be used for different type of fluids by changing O-ring material.

Operating conditions — **see page 8**

Pressure	≤ 50 MPa
Temperature	-30°C to 100°C
Speed	≤ 15 m/s
Fluids	**see pages 22-45**

Materials — **see pages 10-19**

Energising element ①	NBR 70 Sh A
Dynamic sealing element ②	
10I/GR...B	PT55
10I/GR...B	PT15
15I/GR...B	PT53

Assembly — **see pages 54-59**

O-ring and PTFE-ring may easily be mounted into the grooved housings (above 12 mm)

Advantages

- Optimal sealing in tandem system
- Suitable as a primary seal (buffer)
- Small sections
- High extrusion resistance and long service life
- Low break-out and running friction
- Compatibility with nearly all media due to the high chemical resistance of the sealing element and the wide selection of O-ring compounds

Please contact us for applications approaching maximum values.

10I/GR...B rod seals are composed of a filled PTFE ring manufactured by machining technique combined with an O-ring that is used as an energising ring.

They are suitable for high sliding speeds due to the low friction force which is among one of the essential properties of PTFE material. Moreover, they can be used for different type of fluids by changing O-ring material.

Operating conditions **see page 8**

Pressure	≤ 50 MPa
Temperature	-30°C to 100°C
Speed	≤ 15 m/s
Fluids	**see pages 22-45**

Materials **see pages 10-19**

Energising element ①	NBR 70 Sh A
Dynamic sealing element ②	
10I/GR...B	PT55
10I/GR...B	PT15
15I/GR...B	PT53

Assembly **see pages 54-59**

O-ring and PTFE-ring may easily be mounted into the grooved housings (above 12 mm)

Advantages

- Optimal sealing in tandem system
- Suitable as a primary seal (buffer)
- Small sections
- High extrusion resistance and long service life
- Low break-out and running friction
- Compatibility with nearly all media due to the high chemical resistance of the sealing element and the wide selection of O-ring compounds

Please contact us for applications approaching maximum values.

Fluids	**see pages 22-45**

Materials — see pages 10-19

Energising element ①	FPM 75 Sh A
Dynamic sealing element ②	PT55

Assembly — see pages 54-59

O-ring and PTFE-ring may easily be mounted into the grooved housings (above 12 mm)

Advantages

- Optimal sealing in tandem system
- Small sections
- High extrusion resistance and long service life
- Low break-out and running friction
- Compatibility with nearly all media due to the high chemical resistance of the sealing element and the wide selection of O-ring compounds

Please contact us for applications approaching maximum values.

4,2 - 6,3	0,25	0,15	
8,1	0,4	0,2	

10I/GR-ISO...B rod seals are composed of bronze-filled PTFE ring manufactured by machining technique combined with an O-ring that is used as an energising ring.

They are suitable for high sliding speeds due to the low friction force which is among one of the essential properties of PTFE material. Moreover, they can be used for different type of fluids by changing O-ring material.

Operating conditions **see page 8**

Pressure	≤ 50 MPa
Temperature	-30°C to 100°C
Speed	≤ 15 m/s
Fluids	**see pages 22-45**

Materials **see pages 10-19**

Energising element ①	NBR 70 Sh A
Dynamic sealing element ②	PT55

Assembly **see pages 54-59**

O-ring and PTFE-ring may easily be mounted into the grooved housings (above 12 mm)

Advantages

- Optimal sealing in tandem system
- Small sections
- High extrusion resistance and long service life
- Low break-out and running friction
- Compatibility with nearly all media due to the high chemical resistance of the sealing element and the wide selection of O-ring compounds

Please contact us for applications approaching maximum values.

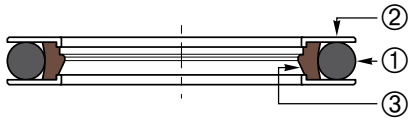
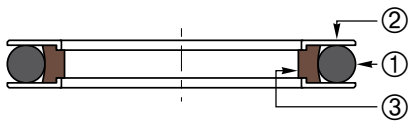
10I/GR-ISO seals for housings following ISO 7425/2 are marked with a chamfer **A** on the corner of outside diameter (pressure side). ATTENTION, outside diameter of housing is larger than the standard **10I/GR**.

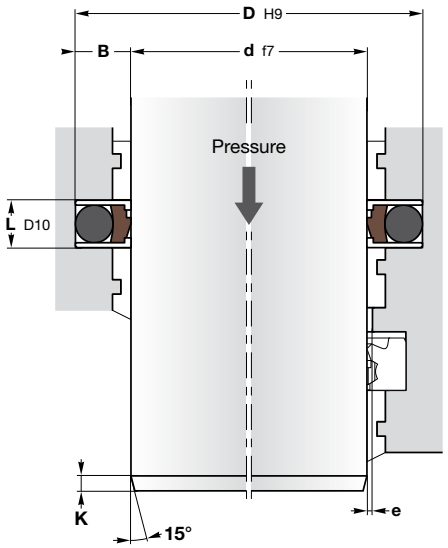
10I/GR-ISO.../B seals with diameters between 20 and 1500 mm can be manufactured within short delivery time.
For prices and availability: **www.sealtech-business.be**



12GGDI-SP



12GGDI



Machining of housings: see pages 48-49

The **12GGDI-SP** inside sealing captive slide and O-Ring seal is a single-acting rod seal with step profile to increase the sealing efficiency.

The **12GGDI-SP** is normally used in tandem with a secondary seal (e.g. **12TDI**) where it can meet the most demanding sealing requirements.

The **12GGDI** is a double acting rod seal.

Operating conditions see page 8

Pressure	≤ 45 MPa
Temperature	-35°C to 100°C
Speed	≤ 1 m/s
Fluids	see pages 22-45

Materials see pages 10-19

Energising element ①	NBR
L-ring ②	POM
Slide ring ③	PTFE-Bronze

Assembly see pages 54-59

In closed grooves

First insert O-ring and slide ring into the groove then the two split L-rings

Advantages

- Optimal sealing in tandem system
- Suitable as a primary seal (buffer)
- Small sections
- High extrusion resistance and long service life
- Low break-out and running friction
- Compatibility with nearly all media due to the high chemical resistance of the sealing element and the wide selection of O-ring compounds

Please contact us for applications approaching maximum values.

8,1	0,4	0,2	

10I/GR...A seal consist of a PTFE sealing element which is energised by an O-ring. This results in an exceptionally good sealing function under high loads.

10I/GR...A design is double-acting. It offers low friction with no stick-slip, reduced break out force and high wear resistance.

Operating conditions see page 8

Pressure	≤ 50 MPa
Temperature	-30°C to 100°C
Speed	≤ 15 m/s
Fluids	see pages 22-45

Materials see pages 10-19

Energising element ①	NBR 70 Sh A
Dynamic sealing element ②	PT55

Assembly see pages 54-59

O-ring and PTFE-ring may easily be mounted into the grooved housings (above 12 mm)

Advantages

- Small sections
- High extrusion resistance and long service life
- Low break-out and running friction
- Compatibility with nearly all media due to the high chemical resistance of the sealing element and the wide selection of O-ring compounds
- Double acting

Please contact us for applications approaching maximum values.

561 - 630	**d** + 18	9	0,4 - 0,5	≤ 0,2

The **12GODI** is a compact seal for piston rods. It can be used for simple and light-duty cylinder designs used in medium pressure ranges.

The sealing effect is provided by the slide ring being pressed against the sealing surface by the O-ring energiser at pressure. The surface finish should be Ra 0.1 - 0.3 µm.

Compact design, good sliding properties and low break-away forces are the main features of this doubleacting seal.

Operating conditions **see page 8**

Pressure	≤ 36 MPa
Temperature	-35°C to 100°C
Speed	≤ 1 m/s
Fluids	**see pages 22-45**

Materials **see pages 10-19**

Energising element ①	NBR
Slide ring ②	PTFE-Bronze

Assembly **see pages 54-59**

In closed grooves

Advantages

Optimal sealing in tandem system
Suitable as a primary seal (buffer)
Small sections
High extrusion resistance and long service life
Low break-out and running friction
Compatibility with nearly all media due to the high chemical resistance of the sealing element and the wide selection of O-ring compounds

Please contact us for applications approaching maximum values.

More information

On **www.sealtech-business.be**, click first on the reference and then on the material code to obtain the data sheet of the different materials.

10VOR is a single acting seal consisting of a U-shaped seal jacket and an helicoil corrosion resistant spring.

10VOR has an asymmetric seal profile. The heavy profile of its dynamic lip with an optimised front angle offers good leakage control, reduced friction and long service life. At low and zero pressure, the **metal spring provides** the primary sealing force.

As the system pressure increases, the main sealing force is achieved by the system pressure and ensures a tight seal from zero to high pressure. The possibility of **matching suitable materials for the seal and the spring** allows use in a wide range of applications beyond the field of hydraulics, e.g. in the chemical, pharmaceutical and foodstuffs industry.

Operating conditions see page 8

Pressure	
PT02	≤ 20 MPa
PT01 **on demand**	≤ 20 MPa
PT15 **on demand**	≤ 40 MPa
Temperature	-70°C to 260°C
Speed	≤ 15 m/s
Fluids	see pages 22-45

Materials see pages 10-19

Seal ①	PT02
	On demand: PT01, PT15
Spring ②	AISI 316-1.4401 = SS
	On demand: Elgiloy® (Cr-Co alloy)
	Hastelloy® (Ni-Mo-Cr alloy)

Assembly see pages 54-59

In closed grooves Ⓐ

In open grooves Ⓑ

Advantage

- Resistant to most fluids
- Low coefficient of friction
- High abrasion resistance
- No stick-slip: precision of operating control
- Small section
- Very high temperature range
- PT01 and PT02 are FDA compliant

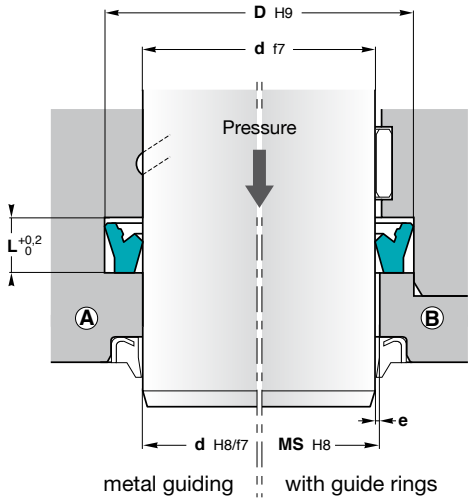
17RL



MS = d + 2e

Machining of housings: see pages 48-49

Pressure (MPa)	**e** (mm) **at 80°C**
5	≤ 0,5
10	≤ 0,5
20	≤ 0,4
30	≤ 0,3
40	≤ 0,2

17RL single-acting rod seal is an alternative to the usual PU U-rings. It is a highly effective sealing system offering optimised sealing performance and extended service life.

With exceptionally low friction properties, it has high wear resistance, exceptional **back pumping ability** along with high static and dynamic tightness.

Operating conditions **see page 8**

Pressure	≤ 40 MPa
Temperature	-35°C to 110°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

Materials **see pages 10-19**

Seal: Z20

Assembly **see pages 54-59**

In closed grooves Ⓐ

In open grooves Ⓑ

Advantages

- Low friction and long service life
- Excellent abrasion and extrusion resistance
- Back-pumping ability over the complete pressure range
- Very low stick-slip

Please contact us for applications approaching maximum values.

50	≤ 0,1

Rod seals are particularly exposed to pressure and friction. A long service life is a specific requirement of this type of seal. **Zurcon® U-Cup RU9** can offer this with its outstanding wear and extrusion resistance.

It is also compatible with most common hydraulic oils, has a wide operating temperature range and low friction. It has compact installation dimensions and is easy to assemble.

Operating conditions — **see page 8**

Pressure	≤ 40 MPa
Temperature	-35°C to 110°C
Speed	≤ 0,5 m/s
Fluids	**see pages 22-45**

metal guiding | with guide rings

MS = d + 2e

T ≥ B

Machining of housings: see pages 48-49

Zurcon® Rimseal **17RR** is an elastomer energised seal element. The changes in seal position in the groove, necessary for optimum sealing function, are guaranteed by the combination of the two parts: the O-Ring and seal ring. In order to achieve a contact force increasing sealing effect with increasing pressure, the seal has a chamfer on the low pressure side which causes the seal to tilt slightly so that the seal ring is forced against the side of the groove. This creates an area of maximum pressure at the edge of the seal.

17RR is preferably used as secondary seal in tandem sealing systems in conjunction with Turcon® Stepseal® 2K.

Operating conditions

see page 8

Pressure	≤ 25 MPa
in tandem with **17RSK** or **17RSV**	≤ 60 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
in tandem with **17RSK** or **17RSV** with short strokes < 1 m	≤ 5 m/s
Fluids	see pages 22-45

Materials

see pages 10-19

Energising element ①	NBR 70 Sh A
Dynamic sealing element ②	Zurcon® Z54

Assembly

see pages 54-59

O-ring and PU-ring may easily be mounted into the grooved housings (above 12 mm)

As the secondary seal in tandem with a **17RSK** PTFE seal as primary seal

Advantages

- High static and dynamic sealing effect
- Low friction for reduced power loss
- High wear resistance for long service life
- Small groove and easy installation

Please contact us for applications approaching maximum values.

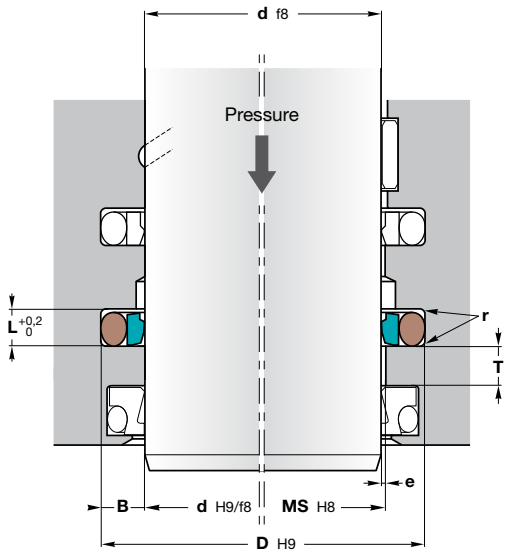
- V — Material ①



metal guiding | with guide rings

MS = d + 2e

T ≥ B

Machining of housings: see pages 48-49

Zurcon® Rimseal **17RR** is an elastomer energised seal element. The changes in seal position in the groove, necessary for optimum sealing function, are guaranteed by the combination of the two parts: the O-Ring and seal ring. In order to achieve a contact force increasing sealing effect with increasing pressure, the seal has a chamfer on the low pressure side which causes the seal to tilt slightly so that the seal ring is forced against the side of the groove. This creates an area of maximum pressure at the edge of the seal.

17RR is preferably used as secondary seal in tandem sealing systems in conjunction with Turcon® Stepseal® 2K.

Operating conditions see page 8

Pressure	≤ 25 MPa
in tandem with **17RSK** or **17RSV**	≤ 60 MPa
Temperature	-20°C to 100°C
Speed	≤ 0,5 m/s
in tandem with **17RSK** or **17RSV** with short strokes < 1 m	≤ 5 m/s
Fluids	see pages 22-45

Materials see pages 10-19

Energising element ①	FPM 70 Sh A
Dynamic sealing element ②	Zurcon® Z54

Assembly see pages 54-59

O-ring and PU-ring may easily be mounted into the grooved housings (above 12 mm)

As the secondary seal in tandem with a **17RSK** PTFE seal as primary seal

Advantages

- High static and dynamic sealing effect
- Low friction for reduced power loss
- High wear resistance for long service life
- Small groove and easy installation

Please contact us for applications approaching maximum values.

metal guiding | with guide rings

MS = d + 2e **T ≥ B**

Machining of housings: see pages 48-49

17RSK is a single-acting O-ring energised rod seal for dynamic applications, **Turcon® Stepseal® 2K** can be installed in closed grooves including grooves according to ISO 7425. It offers high sealing efficiency, low friction with no stick-slip, minimal break out force and high wear resistance.

Optimum sealing characteristics are achieved by installing a tandem Turcon® Stepseal® or Rimseal arrangement together with a double-acting scraper.

Operating conditions — see page 8

Pressure	
Turcon® T46 and M12	≤ 50 MPa
Turcon® T29	≤ 30 MPa
Temperature	-30°C to 100°C
Speed	≤ 15 m/s
Fluids	**see pages 22-45**

Materials — see pages 10-19

Energising element ①	NBR
Dynamic sealing element ②	Turcon® T46 Turcon® T29 **NEW:** Turcon® M12

Assembly — see pages 54-59

Advantages

Low friction, no stick-slip, long service life

Small housing and simple groove design

Please contact us for applications approaching maximum values.

Machining of housings: see pages 48-49

17RSK is a single-acting O-ring energised rod seal for dynamic applications, **Turcon® Stepseal® 2K** can be installed in closed grooves including grooves according to ISO 7425. It offers high sealing efficiency, low friction with no stick-slip, minimal break out force and high wear resistance.

Optimum sealing characteristics are achieved by installing a tandem Turcon® Stepseal® or Rimseal arrangement together with a double-acting scraper.

Operating conditions see page 8

Pressure	
Turcon® T46 and M12	≤ 50 MPa
Turcon® T29	≤ 30 MPa
Temperature	-30°C to 100°C
Speed	≤ 15 m/s
Fluids	see pages 22-45

Materials see pages 10-19

Energising element ①	NBR
Dynamic sealing element ②	Turcon® T46 Turcon® T29 **NEW:** Turcon® M12

Assembly see pages 54-59

Advantages

Low friction, no stick-slip, long service life

Small housing and simple groove design

Please contact us for applications approaching maximum values.

More information

On **www.sealtech-business.be**, click first on the reference and then on the material code to obtain the data sheet of the different materials.

* At pressures ≥ **40 MPa** use diameter tolerance H8/f7 (bore/rod) in the area behind seal (metal guiding).

** For easier installation in closed grooves with small rod diameters < 40 mm.

*** All O-rings with 12 mm cross section are delivered as a special profile ring

For special requirements (fluid, temperature, pressure, speed...) or applications approaching maximum values, please contact us. Other **Turcon®** and **elastomer** materials possible.

Machining of housings: see pages 48-49

17RSK is a single-acting O-ring energised rod seal for dynamic applications, **Turcon® Stepseal® 2K** can be installed in closed grooves including grooves according to ISO 7425. It offers high sealing efficiency, low friction with no stick-slip, minimal break out force and high wear resistance.

Optimum sealing characteristics are achieved by installing a tandem Turcon® Stepseal® or Rimseal arrangement together with a double-acting scraper.

Operating conditions see page 8

Pressure	
Turcon® T46 and M12	≤ 50 MPa
Turcon® T29	≤ 30 MPa
Temperature	-20°C to 200°C
Speed	≤ 15 m/s
Fluids	see pages 22-45

Materials see pages 10-19

Energising element ①	FPM
Dynamic sealing element ②	Turcon® T46 Turcon® T29 **NEW:** Turcon® M12

Assembly see pages 54-59

Advantages

Low friction, no stick-slip, long service life

Small housing and simple groove design

Please contact us for applications approaching maximum values.

- 0 — Type (standard)
- 0800 — Diameter **d** (mm x 10)
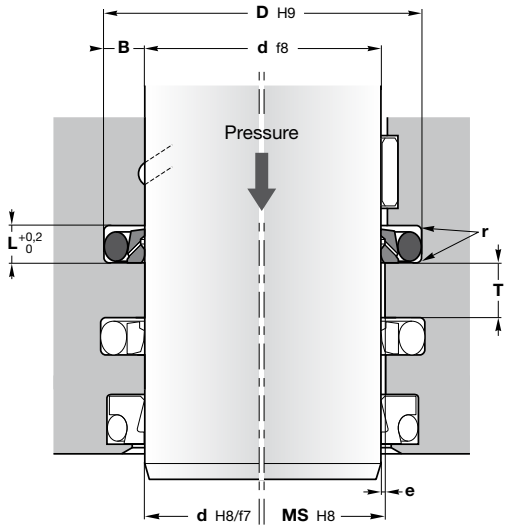
- M12 — Material ② (Material ①: N)



MS = d + 2e **T ≥ B**

Machining of housings: see pages 48-49

17RSV Stepseal® V is based on the dynamic, unidirectional Stepseal® sealing concept. During the extending stroke of the rod, focusing of contact force on the unique Stepseal® sealing edge creates high local sealing pressure and limits the micro fluid film formation under the seal.

When the rod is retracted, the design of the full Stepseal® sealing face supports hydrodynamic **back-pumping** of the fluid film, and so ensures leak-free sealing efficiency with low friction and long service life.

In **long-stroke cylinders**, and equipment operating with low speed during retraction, it has been found that hydrodynamic back-pumping may become insufficient to prevent build-up of pressure in the seal system behind the primary seal. Pressure build-up in the seal system leads to leakage, increased friction and wear, and may ultimately require replacement of the seals.

First invented by Trelleborg Sealing Solutions, the build-in check valve function eliminates pressure build-up and so render buffer volumes and drain lines obsolete.

Operating conditions see page 8

Pressure	
17RSV...-M12N	≤ 50 MPa
17RSV...-T46N	≤ 50 MPa
Temperature	-30°C to 100°C
Speed	≤ 15 m/s
Fluids	see pages 22-45

Materials see pages 10-19

Energising element ①	NBR 70 ShA
Dynamic sealing element ②	
17RSV...-M12N	Turcon® M12
17RSV...-T46N	Turcon® T46

Assembly see pages 54-59

Advantages

- Low friction
- No stick-slip
- Long service life
- Small housing and simple groove design
- Check valve function
- Stabilised position in the groove
- Hydrodynamic back-pumping

Please contact us for applications approaching maximum values.

Sealtech code	Profile serie	Type (standard)	Diameter **d** (mm x 10)	Material ②	Material ①

Machining of housings: see pages 48-49

17RSV Stepseal® V is based on the dynamic, unidirectional Stepseal® sealing concept. During the extending stroke of the rod, focusing of contact force on the unique Stepseal® sealing edge creates high local sealing pressure and limits the micro fluid film formation under the seal.

When the rod is retracted, the design of the full Stepseal® sealing face supports hydrodynamic **back-pumping** of the fluid film, and so ensures leak-free sealing efficiency with low friction and long service life.

In **long-stroke cylinders**, and equipment operating with low speed during retraction, it has been found that hydrodynamic back-pumping may become insufficient to prevent build-up of pressure in the seal system behind the primary seal. Pressure build-up in the seal system leads to leakage, increased friction and wear, and may ultimately require replacement of the seals.

First invented by Trelleborg Sealing Solutions, the build-in check valve function eliminates pressure build-up and so render buffer volumes and drain lines obsolete.

Operating conditions	**see page 8**
Pressure	≤ 60 MPa
Temperature	-20°C to 100°C
Speed	≤ 2 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Energising element ①	FPM 75 ShA
Dynamic sealing element ②	Zurcon® Z53

Assembly	**see pages 54-59**

Advantages

- Low friction
- No stick-slip
- Long service life
- Small housing and simple groove design
- Check valve function
- Stabilised position in the groove
- Hydrodynamic back-pumping

Please contact us for applications approaching maximum values.

17RDD Turcon® Double Delta® is an rubber energised PTFE seal. The seal is designed to expand and improve the service parameters of O-rings and is installed in existing O-ring grooves. Double Delta® combines the flexibility and response of O-rings with the wear and friction characteristics of the Turcon® materials in dynamic applications.

The figures below shows the cross section of the Double Delta®. The double acting performance of the seal follows from the symmetrical cross section which allow the seal to respond to pressure in both directions.

Initial contact pressure is provided by radial compression of the O-ring. When the system pressure is increased the O-ring transforms this into additional contact pressure. The contact pressure of the seal is thereby automatically adjusted ensuring sealing under all service conditions.

Operating conditions	**see page 8**
Pressure	≤ 35 MPa
Temperature	-30°C to 100°C
Speed	≤ 15 m/s
Fluids	**see pages 22-45**

Materials	**see pages 10-19**
Energising element ①	NBR 70 Sh A
Dynamic sealing element ②	Turcon® T46

Assembly	**see pages 54-59**

O-ring and PTFE-ring may easily be mounted into the grooved housings (above 12 mm)

Advantages

- Low friction
- No stick-slip
- Long service life
- Small section and simple groove design
- Assembly in O-ring grooves following MIL-G-5514F
- Compatibility with nearly all media due to the high chemical resistance of the sealing element and the wide selection of O-ring compounds

Please contact us for applications approaching maximum values.

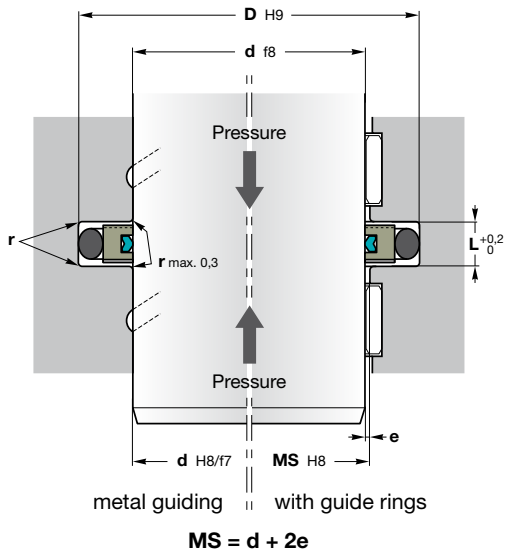
17RQB

Example of item code

17 RQB3 0 0800 - M12 N

- 17: Sealtech code
- RQB3: Profile serie
- 0: Type (standard)
- 0800: Diameter **d** (mm x 10)
- M12: Material ② (Turcon® M12)
- N: Material ① (NBR 70 Sh A)



MS = d + 2e

Machining of housings: see pages 48-49

17RQB is a double-acting O-ring energised seal developed for sealing between two media such as fluid and gas. It incorporates a limited footprint polyurethane Bean Seal inset into the dynamic sealing face. Possible installation in grooves according to ISO 7425.

Operating conditions see page 8

Pressure	≤ 40 MPa
Temperature	-30°C to 100°C
Speed	≤ 2 m/s
Fluids	see pages 22-45

Materials see pages 10-19

Energising element ①	NBR 70 Sh A
Dynamic sealing element ②	Turcon® M12
Bean seal ③	Zurcon® Z54

Assembly see pages 54-59

O-ring and PTFE-ring may easily be mounted into the grooved housings (above 18 mm)

Advantages

- High sealing effect in applications requiring media separation, e.g. fluid/fluid or fluid/gas
- Low friction
- Double security trough the combination of different materials
- No stick-slip
- Long service life
- Small section and simple groove design

Please contact us for applications approaching maximum values.

* At pressures ≥ **40 MPa** use diameter tolerance H8/f7 (bore/rod) in the area behind seal (metal guiding).

** All O-rings with 12 mm cross section are delivered as a special profile ring

For special requirements (fluid, temperature, pressure, speed...) or applications approaching maximum values, please contact us. Other **Turcon®** and **elastomer** materials possible.

More information

On **www.sealtech-business.be**, click first on the reference and then on the material code to obtain the data sheet of the different materials.

17RVA Variseal® M2 is a single-acting rod seal energised by a special SlantCoil® spring. The advantage of the Variseal® M2 lies in its low friction and relatively constant preloading force over a relatively large deformation range. The seal is used wherever friction has to be kept within a narrow tolerance zone, for instance in pressure switches.

17RVA U-ring is a single-acting PTFE or Z80 seal in the form of an inner sealing U-ring. The steel V-Spring activates the sealing lip permanently so that even in a non-pressurised state, good sealing performance is guaranteed.

Operating conditions **see page 8**

Pressure	
T40	≤ 45 MPa
T05	≤ 20 MPa
Z80	≤ 40 MPa
Temperature	
T40 / T05	-70°C to 260°C
Z80	-70°C to 80°C
Speed	
T40 / T05	≤ 15 m/s
Z80	≤ 2 m/s
Fluids	**see pages 22-45**

Materials **see pages 10-19**

Seal ①	T40, T05, Z80
Spring ②	AISI 301 = S

Assembly **see pages 54-59**

In closed housings Ⓐ
In open housings Ⓑ

Advantages

Resistant to most fluids
Low coefficient of friction
High abrasion resistance
No stick-slip: precision of operating control
Small section
Very high temperature range

Please contact us for applications approaching maximum values.
