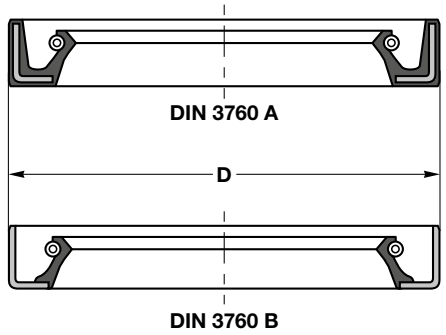
1 OIL SEALS OUTER DIAMETER

Table 990A

Outer diameter D (mm)	Outer diameter tolerances		Eccentricity (mm)
	DIN3760A DIN3761A (mm)	DIN3760B DIN3761B (mm)	
< 50	+ 0,3 + 0,15	+ 0,2 + 0,1	0,125
50 → 80	+ 0,35 + 0,2	+ 0,23 + 0,13	0,175
80 → 120	+ 0,35 + 0,2	+ 0,25 + 0,15	0,25
120 → 180	+ 0,45 + 0,25	+ 0,28 + 0,18	0,325
180 → 300	+ 0,45 + 0,25	+ 0,3 + 0,2	0,4
300 → 500	+ 0,55 + 0,3	+ 0,35 + 0,23	0,5
> 500	+ 0,65 + 0,4	+ 0,4 + 0,28	0,25% x **D**



The press fit allowance and the eccentricity of oil seals are given in **Table 990A**.

2 THE SHAFT FOR OIL SEALS

The shaft surface should have a hardness of minimum 55HRc on a depth of 0,3 mm. In case of heavy polluted environments and high speed (more than 4 m/s), a hardness of 55-60 HRc must be respected.

3 OIL SEALS INTERCHANGE TABLE

4 OIL SEALS AUTHORISED SPEED

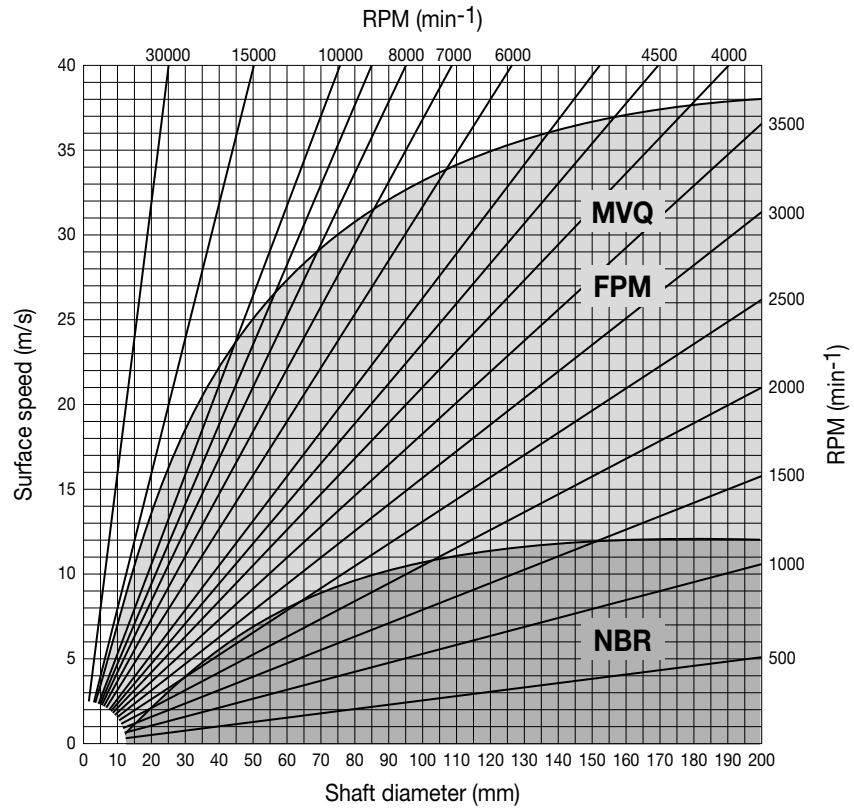

Fig. 991

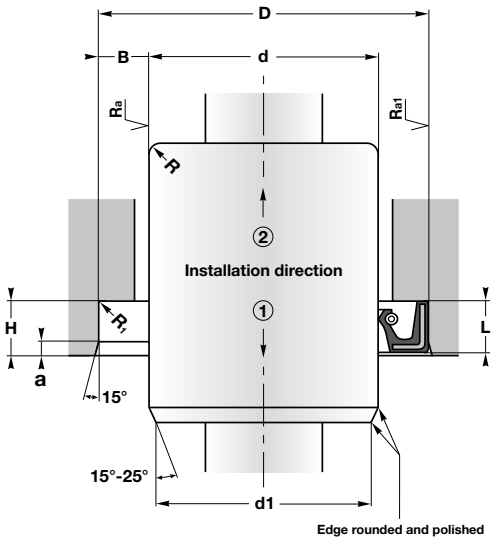
The **Fig. 991** shows the permissible peripheral speed for seals made with NBR, FPM and MVQ. The values are only concerning the seals without dust lip.

5 OIL SEALS DESIGN INSTRUCTIONS



R_1 = 0,5 mm a = 0,15 L H = L + 0,3 mm

Fig. 992

• Surface roughness

The values of the surface roughness are specified in table here below.

• Chamfers and radii

Avoid machining of sharp corners.

With the table here below, you can find the right dimension for lead-in chamfers and radius.

Surface roughness (µm)

Parameter	**Ra**	Rz	R max
Shaft	**0,2 - 0,8**	1 - 4	< 6
Housing Metal cased	**0,8 - 3,2**	6,3 - 16	< 16
Housing Rubber covered	**1,6 - 6,3**	10 - 25	< 25

Chamfers and radii (mm)

d	**d1**	**R**
< 10	**d** - 1,5	2
10 - 20	**d** - 2	2
20 - 30	**d** - 2,5	3
30 - 40	**d** - 3	3
40 - 50	**d** - 3,5	4
50 - 70	**d** - 4	4
70 - 95	**d** - 4,5	5
95 - 130	**d** - 5,5	6
130 - 240	**d** - 7	8
240 - 500	**d** - 11	12

6 ROTARY SEALS DESIGN INSTRUCTIONS

• Assembly in open or closed housings

According to profile and cross section, the split grooves are required if the nominal diameter of the seal is less than **d min** (See table “Assembly in open or closed housings”).

• Surface roughness

The values of **Ra** and **Rt** are specified in table here below.

• Chamfers

You can find the right dimension for lead-in chamfers **a** and angle **α**.

• Radii

The values of the radii are specified in the table.

Assembly in open or closed housings

Profile	**d min.**	**L**	**Profile**	**d min.**	**L**
13DB/R	40	-	**13DB/R.../NEI**	60	-

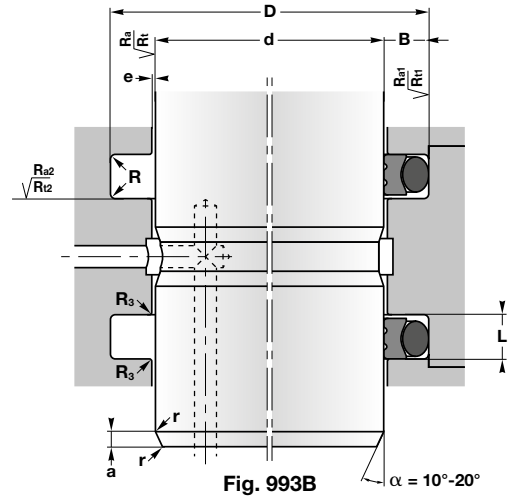

Fig. 993B

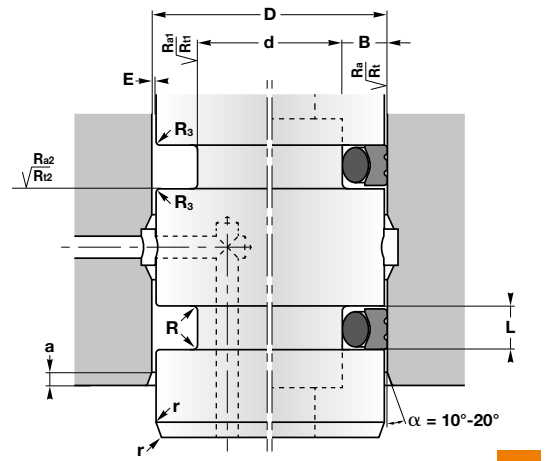

Fig. 993C

7 OIL SEALS INSTALLATION

• Assembly on the shaft

Direction ① (see **Fig. 994A**)
For oil seals, if the chamfer of the shaft is not sufficient, it is necessary to use a tool to avoid damaging the lips.

Assembly with a tool			
d (mm)	6 → 60	65 → 135	140 → 200
d1 (mm)	**d** - 3	**d** - 4	**d** - 5,5

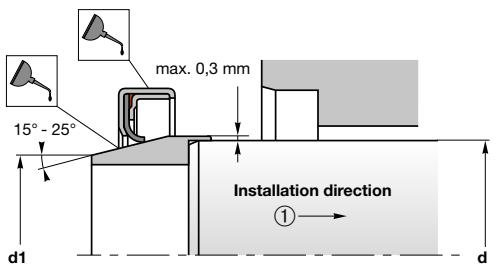

Fig. 994A

Direction ② (see **Fig. 994B**)
A radius is sufficient to mount the seal.

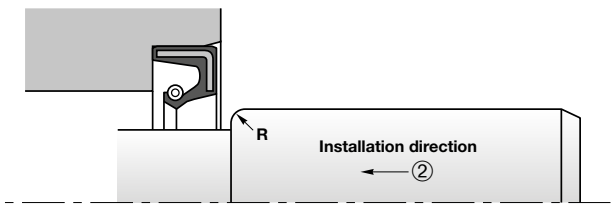

Fig. 994B

• Installation in the gland:

We advise to respect the five principles of assembly as shown (**Fig. 995A** to **Fig. 995E**).

Lubricate the oil seal (with grease or oil) to reduce the frictions during the assembly. It is essential to use a tool for the correct installation of the seal.

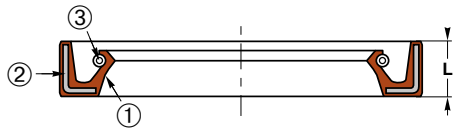
13A

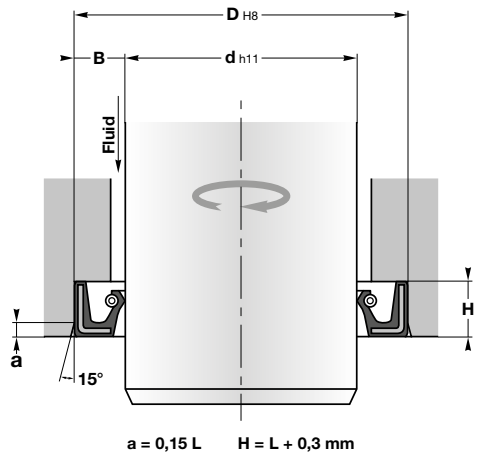


13A... FPM

Example of item code

13A 095 125 NBR/ST/SS

- 13A: Profile
- 095: Diameter **d** (mm)
- 125: Diameter **D** (mm)
- NBR/ST/SS: Materials ①/②/③



Machining of housings: see page 992

13A is a radial oil seal with completely rubber covered outer diameter and a spring-loaded sealing lip. This type is not recommended for use in heavily polluted applications.

Operating conditions see page 8

Pressure	≤ 0,05 MPa
Temperature	
13A	-30°C to 100°C
13A... FPM	-20°C to 200°C
Speed	3 to 10 m/s
Fluids	Mineral oils, water emulsions
Shaft surface hardness	≥ 55 HRC
Shaft hardness depth	≥ 0,3 mm

Materials see pages 10-19

Seal ①	NBR or FPM
Metal cage ②	ST
Spring ③	Standard: ST On demand: SS

Assembly see pages 994-995

In open groove

Advantages

- Good static sealing
- Reduced risk of corrosion
- Higher bore roughness

Please contact us for applications approaching maximum values.

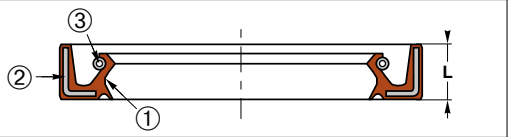
13AS

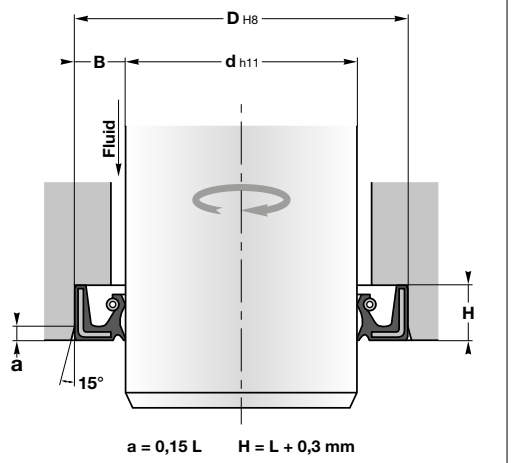


13AS...FPM

Example of item code

13AS 085 110 FPM/ST/SS

- 13AS: Profile
- 085: Diameter **d** (mm)
- 110: Diameter **D** (mm)
- FPM/ST/SS: Materials ①/②/③



Machining of housings: see page 992

13AS is a radial oil seal with completely rubber covered outer diameter, spring-loaded sealing lip and an additional dust lip which prevent the introduction of dust and dirt from the outside.

Operating conditions see page 8

Pressure	≤ 0,05 MPa
Temperature	
13AS	-30°C to 100°C
13AS... FPM	-20°C to 200°C
Speed	3 to 10 m/s
Fluids	Mineral oils, water emulsions
Shaft surface hardness	≥ 55 HRC
Shaft hardness depth	≥ 0,3 mm

Materials see pages 10-19

Seal ①	NBR or FPM
Metal cage ②	ST
Spring ③	Standard: ST On demand: SS

Assembly see pages 994-995

In open groove

Advantages

- Good static sealing
- Reduced risk of corrosion
- Higher bore roughness
- Additional dust lip

Please contact us for applications approaching maximum values.

More information

On **www.sealtech-business.be**, click first on the reference and then on the material code to obtain the data sheet of the different materials.

13AS seals with diameters between 20 and 1500 mm can be manufactured within short delivery time. For prices and availability: **www.sealtech-business.be**

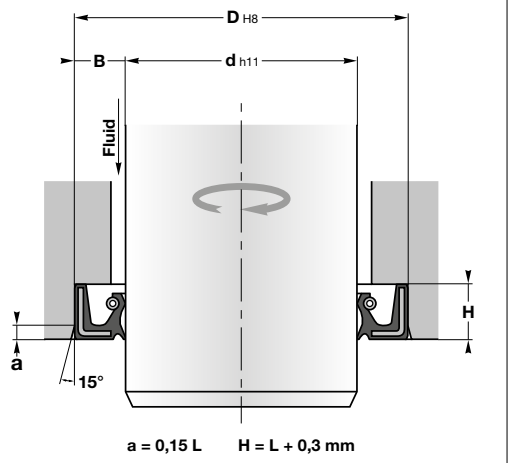
13AS

13AS...FPM

Example of item code

13AS 085 110 FPM/ST/SS

- 13AS: Profile
- 085: Diameter **d** (mm)
- 110: Diameter **D** (mm)
- FPM/ST/SS: Materials ①/②/③



Machining of housings: see page 992

The **13AS** is a radial oil seal with completely rubber covered outer diameter, spring-loaded sealing lip and an additional dust lip which prevent the introduction of dust and dirt from the outside.

Operating conditions see page 8

Pressure	≤ 0,05 MPa
Temperature	
13AS	-30°C to 100°C
13AS... FPM	-20°C to 200°C
Speed	3 to 10 m/s
Fluids	Mineral oils, water emulsions
Shaft surface hardness	≥ 55 HRC
Shaft hardness depth	≥ 0,3 mm

Materials see pages 10-19

Seal ①	NBR or FPM
Metal cage ②	ST
Spring ③	Standard: ST On demand: SS

Assembly see pages 994-995

In open groove

Advantages

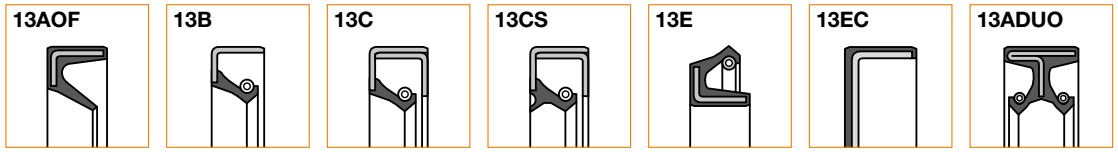
- Good static sealing
- Reduced risk of corrosion
- Higher bore roughness
- Additional dust lip

Please contact us for applications approaching maximum values.

More information

On www.sealtech-business.be, click first on the reference and then on the material code to obtain the data sheet of the different materials.

On request:



For special requirements (fluid, temperature, pressure, speed...) or applications approaching maximum values, please contact us. Other materials available: **FPM**, **HNBR**, **TNBR**, **EPDM**...

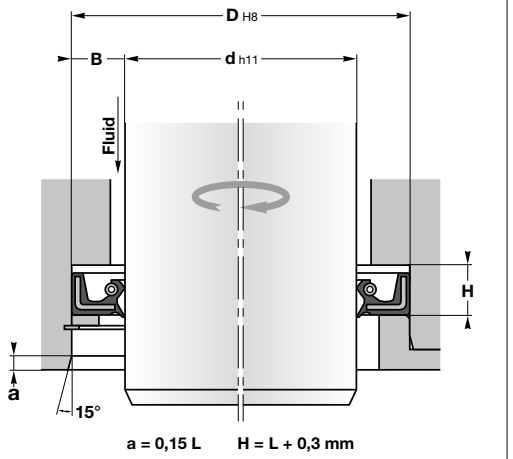
13ASP

13ASP... FPM

Example of item code

13ASP 095 120 FPM/ST/SS

- 13ASP: Profile
- 095: Diameter **d** (mm)
- 120: Diameter **D** (mm)
- FPM/ST/SS: Materials ①/②/③



a = 0,15 L H = L + 0,3 mm

Machining of housings: see page 992

13ASP is a radial oil seal with completely rubber covered outer diameter and a short flexible spring-loaded sealing lip. This type of seal is designed for pressures up to 1 MPa. The additional dust lip protects the system against moderate to medium dust and dirt ingress from the outside.

It is preferably used in conjunction with a retainer (e.g. circlip, shoulder, etc) to avoid a "pop-out" of the seal.

Operating conditions see page 8

Pressure	≤ 1 MPa
Temperature	
13ASP	-30°C to 100°C
13ASP... FPM	-20°C to 200°C
Speed	3 to 10 m/s
Fluids	Mineral oils, water emulsions
Shaft surface hardness	≥ 55 HRC
Shaft hardness depth	≥ 0,3 mm

Materials see pages 10-19

Seal ①	NBR or FPM
Metal cage ②	ST
Spring ③	Standard: ST On demand: SS

Assembly see pages 994-995

In open groove

Advantages

- Good static sealing
- Reduced risk of corrosion
- Higher bore roughness
- Additional dust lip
- Up to 1 MPa at low peripheral speed

Please contact us for applications approaching maximum values.

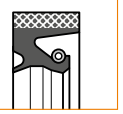
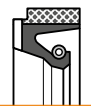
13G5S



13G6

13G7



13G5 contains no metal parts excepted the spring. Instead of the metal insert, a fabric reinforced elastomer is molded into the body of the seal.

The standard sealing lip is in NBR.

Operating conditions	**see page 8**
Pressure	≤ 0,05 MPa
Temperature	-30°C to 100°C
Speed	3 to 10 m/s
Fluids	Mineral oils, water emulsions
Shaft surface hardness	≥ 55 HRC
Shaft hardness depth	≥ 0,3 mm

Materials	**see pages 10-19**
Seal	NBR / NBR-C
Spring ②	ST

Assembly	**see pages 994-995**
In open groove	

Advantages

- Easy assembly
- Reduced risk of corrosion
- Higher bore roughness

Please contact us for applications approaching maximum values.

13G5 seals with diameters between 20 and 1500 mm can be manufactured within short delivery time.
For prices and availability: **www.sealtech-business.be**

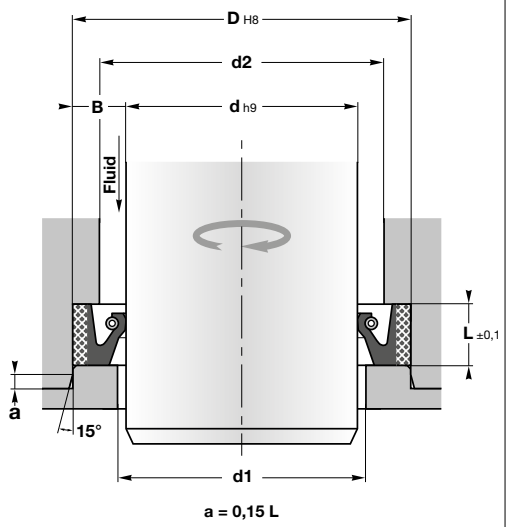
13G5



Machining of housings: see page 992

d	d1	d2
< 100	**d** + 4	**d** + **B**
100 - 250	**d** + 8	
250 - 400	**d** + 12	
400 - 600	**d** + 14	
> 600	**d** + 16	

13G5 contains no metal parts excepted the spring. Instead of the metal insert, a fabric reinforced elastomer is molded into the body of the seal.

The standard sealing lip is in NBR.

Operating conditions see page 8

Pressure	≤ 0,05 MPa
Temperature	-30°C to 100°C
Speed	3 to 10 m/s
Fluids	Mineral oils, water emulsions
Shaft surface hardness	≥ 55 HRC
Shaft hardness depth	≥ 0,3 mm

Materials see pages 10-19

Seal	NBR / NBR-C
Spring ②	ST

Assembly see pages 994-995

In open groove

Advantages

Easy assembly
Reduced risk of corrosion
Higher bore roughness

Please contact us for applications approaching maximum values.

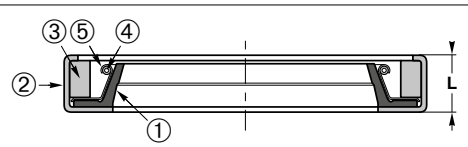
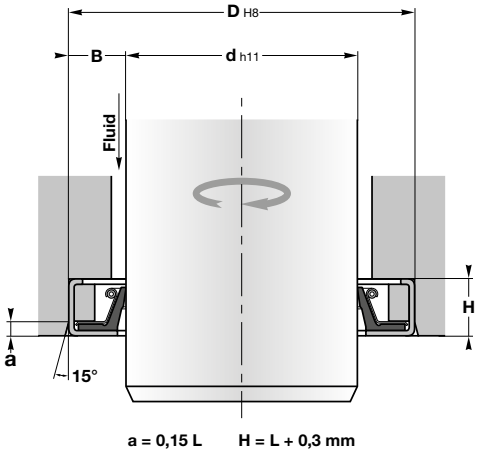
13G5 seals with diameters between 20 and 1500 mm can be manufactured within short delivery time.
For prices and availability: **www.sealtech-business.be**



13LM



Machining of housings: see page 992

13LM has been specially developed for severe operating conditions with large misalignments and high speeds where rigidity and strength are necessary. The oil seal can absorb misalignment up to 5 mm (radial up to 2,5 mm). The sealing lip is in NBR and vulcanised onto the metal casing. A groove on the external diameter allows the operator to center the oil seal in the housing bore, easing the assembly.

This profile is only available for large diameters, from 180 mm I.D. up to 2000 mm O.D.

Operating conditions	**see page 8**
Pressure	≤ 0,05 MPa
Temperature	-30°C to 100°C
Speed	3 to 10 m/s
Fluids	Mineral oils, water emulsions
Shaft surface hardness	≥ 55 HRC
Shaft hardness depth	≥ 0,3 mm

Materials	**see pages 10-19**
Seal ①	NBR
Metal cage ②	ST
Ring ③	SS
Spring ④	ST
Spring retainer ⑤	SS

Assembly	**see pages 994-995**
In open groove	

Advantages

Good radial stiffness and stability

For large diameters up to 2000 mm O.D.

Please contact us for applications approaching maximum values.

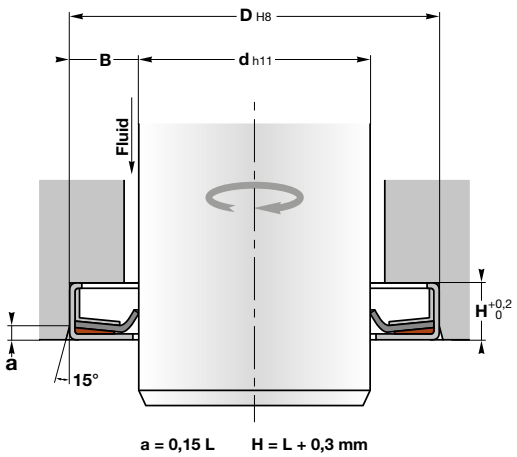
13APT



Machining of housings: see page 992

13APT is used in special range of applications generally in mechanical engineering and in the chemical industry. The sealing lip is made of carbon-filled PTFE which has good resistance to high temperatures and chemicals, but also outstanding friction behaviour and stick-slip free running. The silicone part assures the static sealing.

Operating conditions see page 8

Pressure	≤ 0,05 MPa
Temperature	-60°C to 200°C
Speed	≤ 30 m/s
Fluids	Mineral oils, HFA, HFB, HFC, HFD
Shaft surface hardness	≥ 55 HRC
Shaft hardness depth	≥ 0,3 mm

Materials see pages 10-19

Seal ①	Carbon filled PTFE
Casing ②	SS
Inner casing ③	SS
Static seal ④	MVQ

Assembly see pages 994-995

In open groove

Advantages

Good resistance to chemicals
Stick-slip free
For high temperatures
For dry running and insufficient lubrication

Please contact us for applications approaching maximum values.

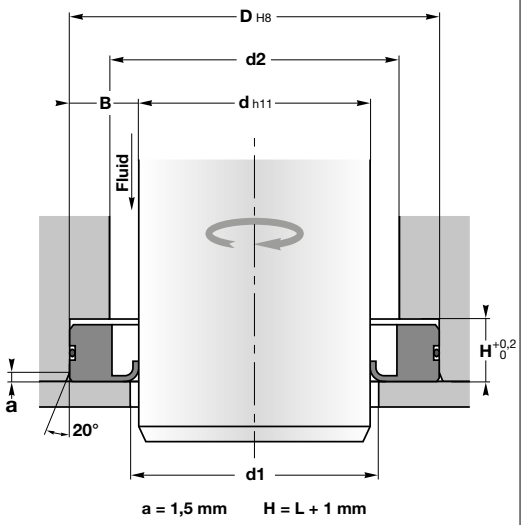
13L1

Example of item code

13L1 030 047 - PT30/4470

Profile | d (mm) | D (mm) | Materials ①/②



Machining of housings: see page 992

d	d1	d2
≤ 90	**d** + 2	**d** + 4
> 90	**d** + 3	**d** + 6

13L1 profile is used in special range of applications generally in mechanical engineering and in the chemical industry. The sealing lip is made of carbon-filled PTFE which has good resistance to high temperatures and chemicals, but also outstanding friction behaviour and stick-slip free running. The NBR part assures the static sealing.

Operating conditions

see page 8

Pressure	≤ 0,5 MPa
Temperature	-30°C to 100°C
Speed for lubricated conditions	≤ 25 m/s
Fluids	Mineral oils, HFA, HFB, HFC, HFD
Shaft surface hardness	≥ 55 HRC
Shaft hardness depth	≥ 0,3 mm

Materials

see pages 10-19

Seal ①	Carbon-graphite filled PTFE
Static seal ②	NBR

Assembly

see pages 994-995

In open groove for diameters < 300 mm

Advantages

Good resistance to chemicals

Stick-slip free

For high temperatures and larger diameters up to 2000 mm, we recommend profile **13L2** with a steel insert

By changing directions of rotation and for shaft eccentricity, we recommend profile **13L6** with a steel insert and a spring

For dry running and insufficient lubrication

Please contact us for applications approaching maximum values.

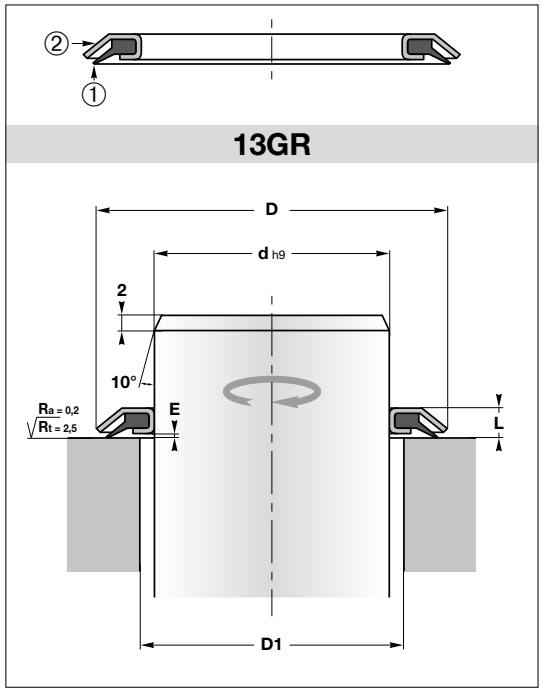
For prices and availability: **www.sealtech-business.be**



13GR is made of two parts, an elastomeric sealing element and a metal case. It has to be fixed to the shaft at a predetermined distance (E) from the sealing surface. This type of seals is primarily used as a seal against foreign matter, liquid splatter and grease. The metal case is protecting the seal from solids and excludes other contaminants by centrifusion.

Operating conditions	**see page 8**
Pressure	none
Temperature	-30°C to 100°C
Speed	≤ 20 m/s
Fluids	none

Materials	**see pages 10-19**
Seal ①	NBR
Casing ②	ST

Assembly

Profile 13GR must be pressed on the shaft

Advantages

Good protection against moderate to medium dust and dirt ingress
Low axial forces, low power loss
Compact seal
Absorption of certain shaft misalignment
Easy assembly

Please contact us for applications approaching maximum values.

For prices and availability: **www.sealtech-business.be**

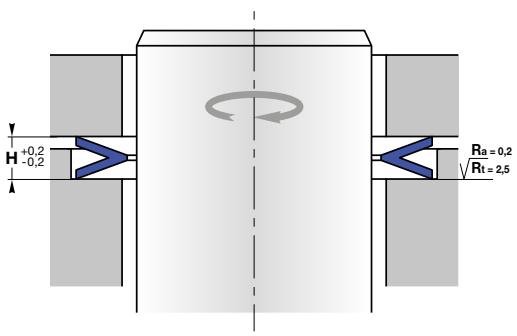
13TFR



The function of the **13TFR** is to prevent the introduction of dust, dirt, mud and foreign matter into the system to protect the internal components. The sealing lips are axial compressed which produce a very effective protection and extend the service life of the components.

This rotary seal is made of polyurethane, which increases the wear resistance and extends the service life. This material also ensures excellent dry running properties.

Operating conditions see page 8

Pressure	none
Temperature	-40°C to 100°C
Speed	3 to 10 m/s
Fluids	Mineral oils, water emulsions

Materials see pages 10-19

Seal	PU10

Assembly

Profile 13TFR must be compressed in its groove respecting the dimension H

Advantages

Easy assembly
Extended service life
Excellent abrasion resistance
Compensation of angular swing movements (up to 2°)

Please contact us for applications approaching maximum values.

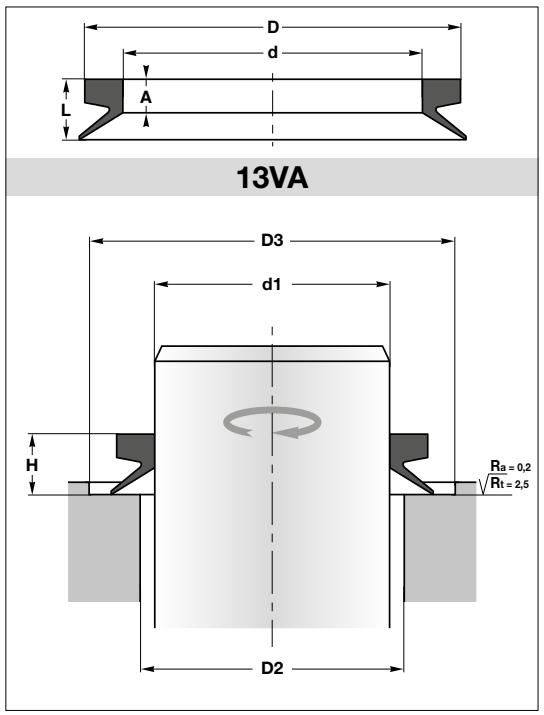
For special requirements (fluid, temperature, pressure, speed...) or applications approaching maximum values, please contact us. Other materials available: **FPM**, **HNBR**, **TNBR**, **EPDM**...

13TFR seals with diameters between 20 and 1500 mm can be manufactured within short delivery time.
For prices and availability: **www.sealtech-business.be**



13VA is an all-rubber face seal. The profile A is the most common. It works as a front seal and is the perfect solution to prevent the introduction of dust, dirt or water into the system. It can also be used as a secondary seal to protect the primary seal.

The V-ring is **self-retaining** on the shaft. The sealing lip is flexible and applies a low contact pressure against the counter face, sufficient to maintain the sealing function.

Operating conditions see page 8

Pressure	none
Temperature	-30°C to 100°C
Speed	≤ 10 m/s
Media	watersplash, sand, dust, abrasive particles...

Materials see pages 10-19

Seal	NBR

Assembly

V-ring has to be stretched regularly around the shaft

Advantages

Easy assembly
Low axial forces, low power loss
Compact seal

Please contact us for applications approaching maximum values.

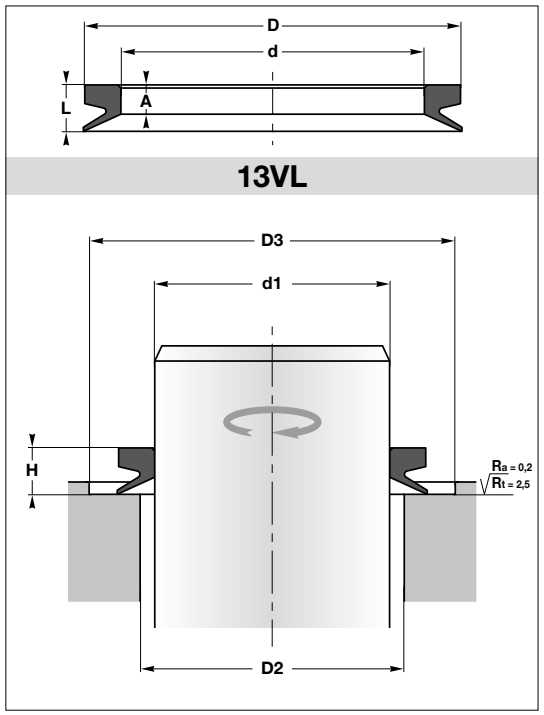
13VL seals with diameters between 20 and 1500 mm can be manufactured within short delivery time.
For prices and availability: **www.sealtech-business.be**



13VL is an all-rubber face seal. It works as a front seal and is the perfect solution to prevent the introduction of dust, dirt or water into the system. It can also be used as a secondary seal to protect the primary seal.

The V-ring is **self-retaining** on the shaft. The sealing lip is flexible and applies a low contact pressure against the counter face, sufficient to maintain the sealing function. The profile L has a narrow axial cross section suitable for compact arrangements.

Operating conditions see page 8

Pressure	none
Temperature	-30°C to 100°C
Speed	≤ 10 m/s
Media	watersplash, sand, dust, abrasive particles...

Materials see pages 10-19

Seal	NBR

Assembly

V-ring has to be stretched regularly around the shaft

Advantages

Easy assembly
Low axial forces, low power loss
Compact seal

Please contact us for applications approaching maximum values.

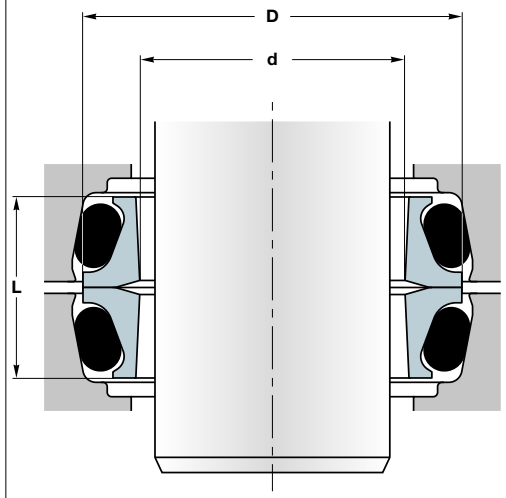
14MFO

Example of item code

14MFO | 195 | CI/MVQ | 60

Profile | D (mm) | Materials ①/② | Hardness Sh A ②



Machining of housings: on request

14MFO are predominantly used for sealing the bearings in construction machinery or production plants operating under extreme arduous conditions and subject to severe wear.

Mechanical face seals are proven in general machine engineering for gearboxes, mixers, stirrers, wind-driven power stations and other applications with similar conditions or where maintenance-free lifetime time sealing is expected.

Operating conditions

see page 8

Pressure

cast iron (CI)	≤ 0,3 MPa
hardened steel (HS)	≤ 0,15 MPa

Temperature

NBR	-30°C to 100°C
HNBR	-30°C to 150°C
MVQ	-50°C to 200°C
FPM	-20°C to 200°C

Speed

cast iron with oil lubrication	≤ 10 m/s
hardened steel with oil lubrication	≤ 2 m/s

Materials

see pages 10-19

Seal ①	Cast iron (CI), hardened steel (HS)
Energising element ②	NBR, HNBR, MVQ, FPM from different hardnesses

Assembly

Install in the grooves

Advantages

- Simple, reliable design
- High sealing effect against dirt, dust, water and abrasive media from the outside and against oil and grease from the inside
- Self-centering to compensate for shaft eccentricity or misalignment
- Maintenance-free
- Easy to assemble
- Cost-effective
- Long service life

Please contact us for applications approaching maximum values.

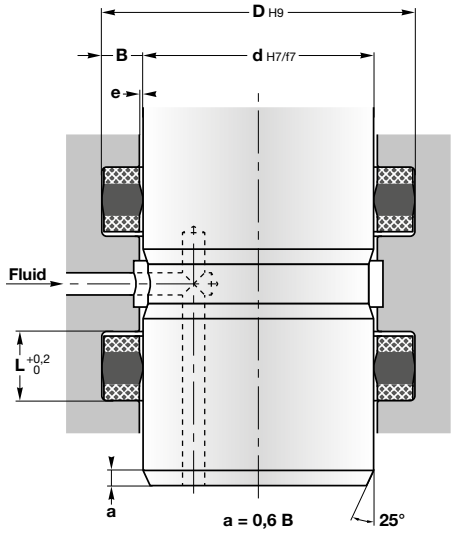
13DB/R



Machining of housings: see page 993

Pressure (MPa)	e (mm)
15	≤ 0,2
20	≤ 0,1

13DB/R is a single-piece seal consisting of an elastomeric sealing element in the middle and two fabric reinforced bases on the side.

Due to the radial pre-load an excellent sealing performance will be achieved even at low pressures.

The fabric reinforced bases prevents the seal from extrusion.

Operating conditions see page 8

Pressure	≤ 20 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,1 m/s
pv value	≤ 2,5 MPa.m/s
Fluids	Mineral oils, water emulsions
Shaft surface hardness	≥ 55 HRC
Shaft hardness depth	≥ 0,3 mm

Materials see pages 10-19

Seal: NBR / NBR-C

Assembly

In open or closed groove

Advantages

- Efficient sealing even at low pressure
- Double acting
- Simple and economical solution

Please contact us for applications approaching maximum values.

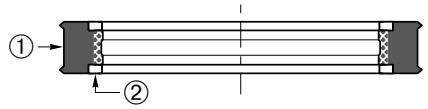
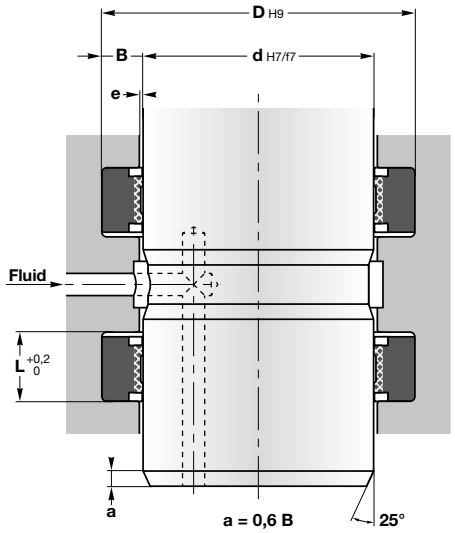
Fabric reinforced double acting rotary seal with anti-extrusion rings



13DB/R.../NEI



Machining of housings: see page 993

Pressure (MPa)	e (mm)
16	≤ 0,4
25	≤ 0,2
40	≤ 0,1

13DB/R.../NEI is a three pieces seal set consisting of an elastomer component with fabric reinforcement on the running surface and two anti-extrusion rings.

The static seal is achieved by two external seal edges.

Operating conditions see page 8

Pressure	≤ 40 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,2 m/s
Fluids	Mineral oils, water emulsions
Shaft surface hardness	≥ 55 HRC
Shaft hardness depth	≥ 0,3 mm

Materials see pages 10-19

Seal ①	NBR-C / NBR
Anti-extrusion rings ②	POM

Assembly

In open or closed groove

Advantages

Efficient sealing even at low pressure
Double acting
Good static sealing
Simple, convenient and compact construction

Please contact us for applications approaching maximum values.

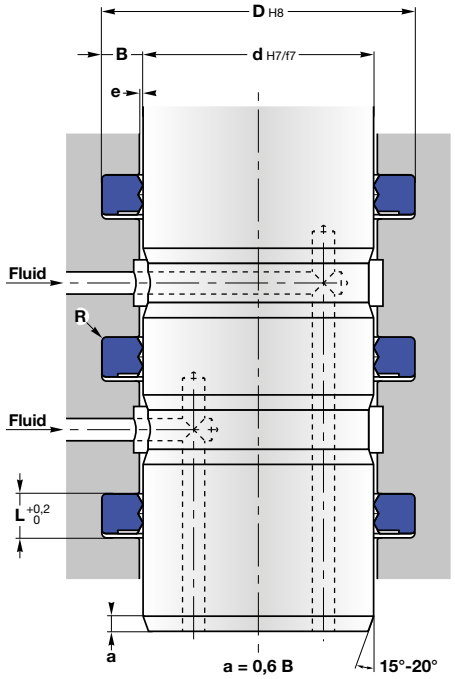
13ROI



Machining of housings: see page 993

Pressure (MPa)	e (mm)
5	≤ 0,5
15	≤ 0,4
25	≤ 0,3
35	≤ 0,2

13ROI is a space-saving rotary seal. The seal is manufactured with a predefined interference fit on the outside diameter, which enables a stable fit in the housing and a good static sealing function. The dynamic seal is achieved by two internal seal edges.

Where extrusion gap are larger than those specified or for higher pressure conditions the serie **13ROI.../A** with two incorporated anti-extrusion rings shall be selected. The seal is produced in polyurethane, which increases the wear resistance and extends the service life.

Operating conditions see page 8

Pressure	≤ 35 MPa
Temperature	-30°C to 90°C
Speed	≤ 0,1 m/s
Fluids	Mineral oils
Shaft surface hardness	≥ 55 HRC
Shaft hardness depth	≥ 0,3 mm

Materials see pages 10-19

Seal: PU

Assembly

In closed housings

Advantages

- Good static sealing
- Easy assembly without tools
- Compact design
- High abrasion resistance
- Long service life

Please contact us for applications approaching maximum values.

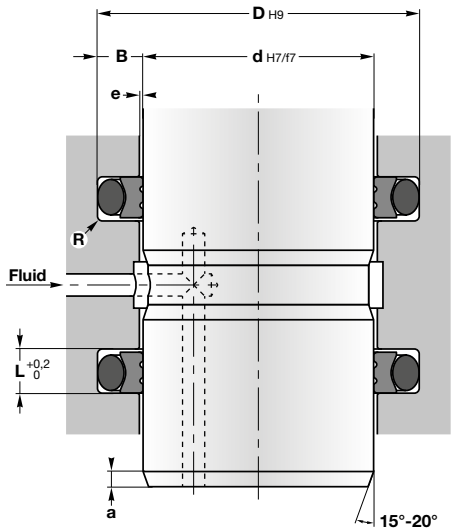
13R9

Example of item code

13R9 - P 0900 PT30/4470

Profile | Range | Diameter (mm x 10) | Materials ①/②



Machining of housings: see page 993

13R9 is a double-acting rotary seal. The pressure can come from one or from both sides. This profile is composed of a PTFE ring and is activated by an O-ring for use under high pressures and at low sliding speed. The profile ring is designed with notches to provide activation of the energising O-ring, these ensure direct pressure loading of the seal under all operating conditions.

The contact surface of the PTFE ring is designed with one or two grooves, which form a lubricant reservoir for better sliding properties. These increase also the seal efficiency by increasing the specific surface load pressure against the sliding surface.

The PTFE has also an **excellent chemical resistance**, which enables by changing the O-ring material the use with different type of oils.

Operating conditions — see page 8

Pressure	≤ 30 MPa
Temperature	-30°C to 100°C
Speed	≤ 2 m/s
pv value	≤ 2,5 MPa.m/s
Fluids	Mineral oils, water emulsions
Shaft surface hardness	≥ 55 HRC
Shaft hardness depth	≥ 0,3 mm

Materials — see pages 10-19

Dynamic seal ①	PT30
Static seal ②	NBR 70 Sh A

Assembly — see page 56

In closed housings

Advantages

- Low friction
- Stick-slip free
- Compact simple groove design
- High abrasion resistance and dimensional stability
- High chemical compatibility with the right O-ring
- Large temperature range -45°C up to 200°C with the right O-ring

Please contact us for applications approaching maximum values.

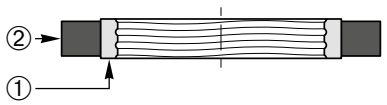
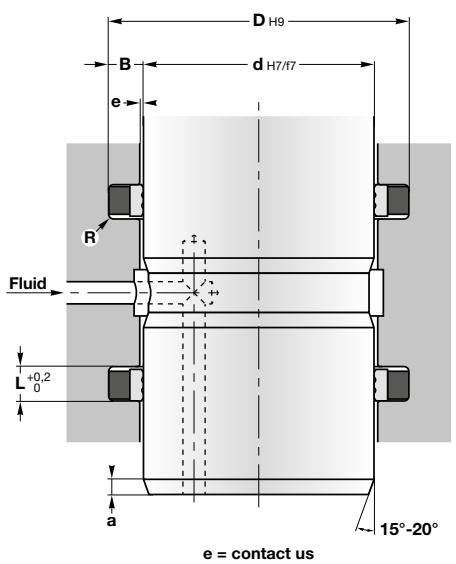
For prices and availability: **www.sealtech-business.be**



41RS



e = contact us

Machining of housings: see page 993

41RS is a combination of a high-strength thermoplastic slide ring with particularly stable thermic properties and an elastomer expander ring. A special contact surface geometry at the inner diameter of the slide ring with an altering pitch optimates the lubrication of the seal. In both friction resistance and wear, this seal is superior to comparable systems. The prestressing element has a rectangular crosssection and avoids, in contrast to O-rings, possible pumping inside the fitting area. Moreover it guarantees a higher density. Even at high pressures, back-up rings for the avoidance of extrusion are not necessary owing to the special slide ring compound. At the same time, it is possible to take maximum advantage of the diameter play between rotor and stator without any functional impairment. This seal can also be used as a final exterior sealing.

Operating conditions	**see page 8**
Pressure	≤ 50 MPa
Temperature	-30°C to 100°C
Speed	≤ 0,5 m/s
pv value	P × v ≤ 40 for L = 4,1 to 4,2 P × v ≤ 70 for L = 6 to 6,3
Fluids	Mineral oils, water emulsions
Shaft surface hardness	≥ 55 HRC
Shaft hardness depth	≥ 0,3 mm

Materials	**see pages 10-19**
Dynamic seal ①	PK natur / W5071
Static seal ②	NBR 70 Sh A / N3571

Assembly **see page 54**

In closed housings

Suitable for grooves conforming to DIN ISO 7425

Advantages

Low friction

Stick-slip free

Compact simple groove design

High abrasion resistance and dimensional stability

High chemical compatibility with the right O-ring

Large temperature range -45°C up to 200°C with the right O-ring

Please contact us for applications approaching maximum values.

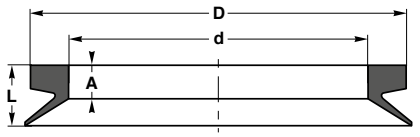
41RS seals with diameters between 20 and 1500 mm can be manufactured within short delivery time.
For prices and availability: **www.sealtech-business.be**

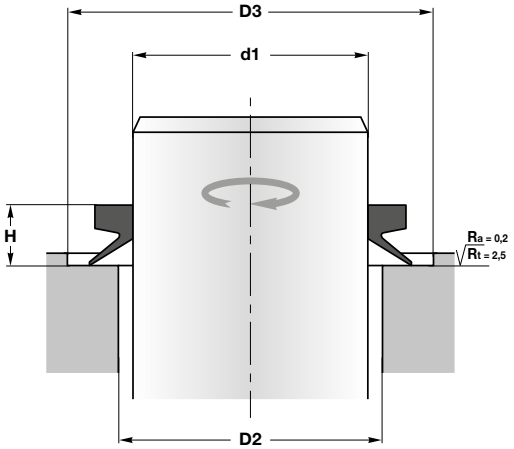


17TWVA

Example of item code

17TWVA 01500 - N6T5C

Profile | Diameter **d1** (mm x 10) | Material



17TWVA is a unique all-rubber face seal for rotary shafts. The V-ring is the perfect seal to prevent the ingress of dirt, dust, water or combinations of these media while positively retaining grease.

It can be also used as a secondary seal to protect primary seals that do not perform well in hostile environments. The profile A is the most common and available from 5,5 to 430 mm, inclusive.

The V-ring is normally stretched and mounted directly on the shaft. The sealing lip is flexible and applies only a relatively light contact pressure against the counter-face and yet is still sufficient to maintain sealing function.

Operating conditions

see page 8

Pressure	none
Temperature	-30°C to 100°C
Speed	≤ 10 m/s
Medium	water splash, sand, dust, abrasive particles

Materials

see pages 10-19

Seal: NBR

Assembly

V-ring has to be stretched regularly around the shaft

Advantages

Easy assembly
Low axial forces, low power loss
Compact seal

Please contact us for applications approaching maximum values.

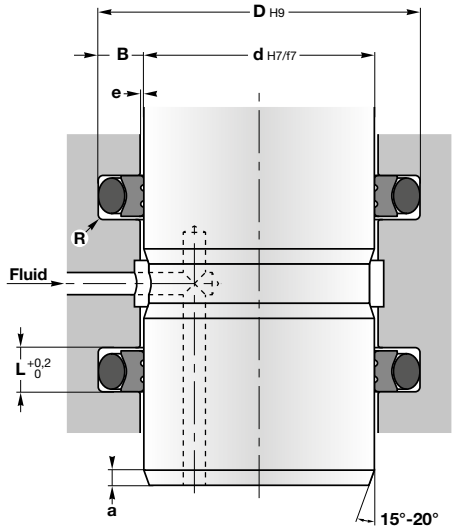
17TG3

Example of item code

17TG 32 0 0450 - T10N

Profile | Range | Type | Diameter d (mm x 10) | Materials ①/②



Machining of housings: see page 993

The Turcon Roto Glyd Ring **17TG3** is double-acting and can be exposed to pressure from one, or from both sides. It consists of a seal ring of Turcon material and is activated by an O-ring as an elastic energising element. The contact surface pressure of the seal ring is specially designed for use under high pressures and at low sliding speeds. Depending on the profile cross-section of the seal, the contact surface has one or two continous machined grooves.

These have the following functions:
- Improved seal efficiency by increasing the specific surface load pressure against the sealed surface
- Formation of **lubricant reservoir** and reduction in friction.
- In order to improve the pressure activation of the O-ring, the Roto Glyd Ring has **notched end faces** as standard. The rear face which holds the O-ring has a concave form. This increases the contact surface and shall prevent the seal from turning with the rotating surface.

Operating conditions see page 8

Pressure	≤ 30 MPa
Temperature	-30°C to 100°C
Speed	≤ 2 m/s
pv value	≤ 2,5 MPa.m/s
Fluids	Mineral oils, water emulsions
Shaft surface hardness	≥ 55 HRC
Shaft hardness depth	≥ 0,3 mm

Materials see pages 10-19

Dynamic seal ①	T10
Static seal ②	NBR 70 Sh A

Assembly see page 56

In closed housings

Advantages

Low friction
Stick-slip free starting, no sticking
High abrasion resistance and dimensional stability
Simple groove design, small groove dimensions
Lubricant reservoir

Please contact us for applications approaching maximum values.

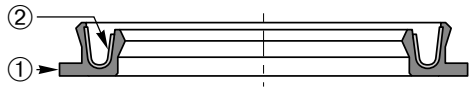
17TG4 seals with diameters between 20 and 1500 mm can be manufactured within short delivery time.
For prices and availability: **www.sealtech-business.be**

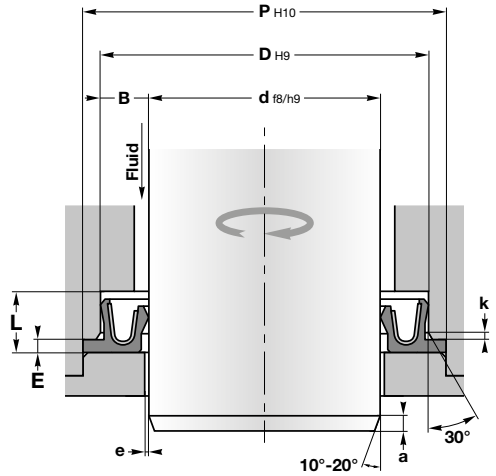


17TVM

Example of item code

17TVM 3 0 0600 - T40S

Profile | Type: Range | Diameter: d (mm x 10) | Materials ①/②



Machining of housings: see pages 993

The Turcon Roto Variseal **17TVM** is a single-acting seal consisting of a U-shaped seal jacket and a V-shaped corrosion resistant metal spring.

The characteristic of the Roto Variseal is the flanged heel, which prevents the seal from rotating by clamping in the groove and the short and heavy dynamic lip offering reduced friction, long service life and a good scraping effect in highly viscous media.

At low and zero pressure, the metal spring provides the **primary sealing force**. As the system pressure increases, the main sealing force is achieved by the system pressure and ensures a tight seal from zero to high pressure.

Operating conditions see page 8

Pressure	≤ 15 MPa
Temperature	-100°C to 260°C
Speed	≤ 2 m/s
pv value	≤ 5 MPa.m/s
Fluids	Mineral oils, HFA, HFB, HFC, HFD
Shaft surface hardness	≥ 55 HRC
Shaft hardness depth	≥ 0,3 mm

Materials see pages 10-19

Seal ①	T40
Spring ②	SS (AISI 301)

Assembly

In open housings

Advantages

- Low friction
- Stick-slip free
- Protects against mechanical torsion
- Remains tight in groove even when subject to oscillating or helical movements
- High abrasion resistance
- Excellent chemical and temperature resistance
- Good scraping ability

Please contact us for applications approaching maximum values.
